Item 8.01 Other Event.

Following recent discussions with representatives of the Food and Drug Administration (FDA) and the Biomedical Advanced Research and Development Authority (BARDA) concerning SIGA Technologies, Inc.'s ("SIGA") smallpox antiviral drug Tecovirimat (also known as ST-246), SIGA expects the provisional dosage for Tecovirimat will be increased to 600 mg administered twice daily (600 mg BID or 1,200 mg per day) from the previous provisional dosage of 600 mg once daily (or 600 mg per day). To accommodate the new provisional dosage, SIGA anticipates extending its delivery schedule of Tecovirimat to BARDA.

The extended delivery schedule is expected to result in the delivery of approximately 360,000 courses at the new provisional dosage in the first quarter of 2015 rather than approximately 710,000 courses as contemplated previously. Accordingly, there will be a reduction in expected payments to SIGA for the delivery of those courses from approximately \$89 million to approximately \$48 million. Deliveries of additional courses in fulfillment of the BARDA contract are expected to occur in 2016, at which time SIGA expects to receive payments of approximately \$41 million. In addition, SIGA may be required to supplement previously delivered courses of Tecovirimat, at no additional cost to BARDA, with additional dosages so that all of the courses previously delivered to BARDA will be at the new provisional dosage.

It is anticipated that SIGA's contract with BARDA will be modified to reflect the above increase in dosage and extended delivery schedule. This modification is subject to the approval of the Bankruptcy Court which SIGA intends to seek in connection with the assumption of the BARDA contract (as so modified) under the provisions of the Bankruptcy Code.
