STATEMENTS REGARDING FORWARD LOOKING INFORMATION

This Quarterly Report on Form 10-Q contains forward looking statements as defined in the *Private Securities Litigation Reform Act of 1995* with respect to our financial condition, results of operations, business prospects, plans, objectives, goals, strategies, future events, capital expenditure, and exploration and development efforts. Words such as "expects," "anticipates," "intends," "believes" and similar expressions identify forward looking statements. These statements include comments regarding:

- closing of and the closing date for the sale of our Nevada Assets;
- production and production costs;
- cash operating costs;
- total cash costs;
- grade;
- remediation efforts;
- exploration;
- development and drilling program;
- life of mine estimates;
- cash flows;
- future financing;
- use of funds;
- the ability to substitute collateral for the convertible debentures;
- expenditures;
- estimates of environmental liabilities;
- cash balances;
- our belief that certain deficiencies in our internal control and procedures have been remediated;
- our ability to fund our working capital and exploration and development expenditures; and
- factors impacting our results of operations.

These forward looking statements are subject to numerous risks, uncertainties and assumptions, including unexpected changes in business and economic conditions; significant increases or decreases in gold, silver, or lead prices; timing and amount of production changes in mining and milling costs; pit slides at our mining properties; results of current and future exploration activities; weather fluctuations; and other factors discussed in our Annual Report on Form 10-K for the year ended December 31, 2004. We disclaim any obligation to update forward looking statements, whether as a result of new information, future events or otherwise.

ACCOUNTING PRINCIPLES, REPORTING CURRENCY AND OTHER INFORMATION

Apollo Gold Corporation prepares its consolidated financial statements in accordance with accounting principles generally accepted in Canada and publishes its financial statements in United States dollars. This Quarterly Report on Form 10-Q should be read in conjunction with our consolidated financial statements and related notes included in this

quarterly report, as well as our annual financial statements for the fiscal year ended December 31, 2004 included in our Annual Report on Form 10-K. Certain classifications have been made to the prior period financial statements to conform with the current period presentation.

Unless stated otherwise, all dollar amounts are expressed in United States dollars.

References to “we,” “our,” “us,” the “Company” or “Apollo” mean Apollo Gold Corporation and its consolidated subsidiaries, to any one or more of them, as the context requires.

NON-GAAP FINANCIAL INFORMATION

Cash operating, total cash and total production costs are non-GAAP financial measures and are used by management to assess performance of individual operations as well as a comparison to other gold producers. We have included cash operating costs information to provide investors with information about the cost structure of our mining operations.

The term “cash operating costs” is used on a per ounce of gold basis. Cash operating costs per ounce is equivalent to direct operating cost as found on the Consolidated Statements of Operations, less production royalty expenses and mining taxes but includes by-product credits for payable silver, lead and zinc.

The term “total cash costs” is equivalent to cash operating costs plus production royalties and mining taxes.

The term “total production costs” is equivalent to total cash costs plus non-cash costs including depreciation and amortization.

This information differs from measures of performance determined in accordance with generally accepted accounting principles (GAAP) in Canada and the United States and should not be considered in isolation or a substitute for measures of performance prepared in accordance with GAAP. These measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP and may not be comparable to similarly titled measures of other companies. See Item 2, Management’s Discussion and Analysis of Financial Condition and Results of Operations, for a reconciliation of these non-GAAP measures to our Statements of Operations.

PART I FINANCIAL INFORMATION

ITEM 1. FINANCIAL STATEMENTS

These consolidated financial statements should be read in conjunction with the financial statements, accompanying notes and other relevant information included in the Company’s Annual Report on Form 10-K for the year ended December 31, 2004 filed with the Securities and Exchange Commission on March 16, 2005.

During the three months ended September 30, 2005 and 2004, property, plant and equipment of \$99 and \$19, respectively, were acquired under a capital lease arrangement.

During the nine months ended September 30, 2004, property, plant and equipment totaling \$340 was acquired under a capital lease arrangement.

During the nine months ended September 30, 2005, the company issued 1,000,000 shares to Argonaut Mines LLC (“Argonaut”) in connection with the restructuring of the Huizopa interest in Mexico. Share capital and property, plant and equipment both increased by \$410 as a result of this transaction.

During the nine months ended September 30, 2004, the company issued 48,978 shares to meet the earn-in requirements of the Huizopa joint venture agreement. Share capital and property, plant and equipment both increased by \$88 as a result of this transaction.

The accompanying notes are an integral part of these interim consolidated financial statements.

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements

Nine month period ended September 30, 2005

(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)

(Unaudited)

1. CONTINUING OPERATIONS

These consolidated financial statements are prepared on the basis of a going concern which assumes that Apollo Gold Corporation (“Apollo” or the “Company”) will realize its assets and discharge its liabilities in the normal course of business for the foreseeable future. To date, Apollo has funded its operations primarily through issuances of debt and equity securities plus the sale of some surplus assets. The Company’s current funds are not sufficient to complete the planned underground drilling program and produce a bankable feasibility study in 2006 at the Black Fox Project and commence an exploration program at its Huizopa project. In May 2005 the Company adopted a plan to dispose of its Nevada assets (the “Nevada Assets”) (the Florida Canyon Mine, Standard Mine and four exploration properties) (see Note 4) and on October 17, 2005, the Company executed a stock purchase agreement (the “Agreement”), pursuant to which the Company has agreed to sell to Jipangu Inc., a Delaware corporation and wholly owned subsidiary of Jipangu International Inc., a Japanese corporation, all of the issued and outstanding stock of Florida Canyon Mining Inc., Standard Gold Mining Inc., and Apollo Gold Exploration Inc. for \$14.0 million. In addition, Apollo entered into a Subscription Agreement with Jipangu for a \$3.5 million private placement pursuant to which Jipangu would purchase up to 11,650,000 units of Apollo priced at Cdn\$0.35 per unit, with each unit consisting of one common share of Apollo and 0.1716 of a warrant with each whole warrant exercisable for two years at Cdn\$0.39 for one common share of Apollo. The closing of the Agreement is subject to certain conditions. The Company expects to use approximately \$10.9 million of the proceeds from the sale of the Nevada Assets to secure the Company’s convertible debentures, currently secured by the Nevada Assets, with the balance used to supplement the funding of the Company’s general and administrative expenses, the development of Black Fox, exploration at Huizopa, the Montana Tunnels operations and other general corporate purposes. External financing would be required to further develop and construct the Black Fox project. The availability, amount, terms and timing of this financing are not certain at this time. If the Company is unable to sell the Nevada Assets, successfully generate cash flow from its mines, or secure additional financing and therefore be unable to continue as a going concern, then material adjustments would be required to the carrying value of assets and liabilities and balance sheet classifications used.

2. NATURE OF OPERATIONS

Apollo is engaged in gold mining including extraction, processing, refining and the production of other by-product metals, as well as related activities including exploration and development. The Company currently owns and operates the Montana Tunnels Mine, an open pit mine and mill, producing gold doré and lead-gold and zinc-gold concentrates located in the State of Montana. The Company also owns the Diamond Hill Mine, currently under care and maintenance, also located in the State of Montana.

Apollo has a development property, the Black Fox Project, which is located near the Township of Matheson in the Province of Ontario, Canada. Apollo also owns Mexican subsidiaries which own or have the right to acquire concessions at the Huizopa exploration project, located in the Sierra Madre gold belt in Chihuahua, Mexico. Pursuant to an agreement with the previous owner of one of those Mexican subsidiaries (the “Previous Owner”), if Apollo exercises its right to acquire those concessions at the Huizopa project on which it currently holds an option, one of Apollo’s Mexican subsidiaries and a Mexican company owned by the Previous Owner will enter into a joint venture agreement governing activities at the Huizopa project going forward, pursuant to which Apollo can elect to ultimately retain up to an 80% interest in the Huizopa project. If Apollo’s Mexican subsidiary chooses not to go forward with the Huizopa project, it is obligated to transfer a controlling interest in the subsidiary that holds the option back to the

Previous Owner, and to transfer 91% of the concessions it owns at the Huizopa Project back to the Previous Owner.

8

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements

Nine month period ended September 30, 2005

**(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)
(Unaudited)**

2. NATURE OF OPERATIONS (Continued)

The Company's assets held for sale, the Nevada Assets (Note 4), include the Florida Canyon Mine, an open pit heap leach operation located in the State of Nevada; the Standard Mine, an open pit heap leach operation situated 8 kilometers south of the Florida Canyon Mine, which shares common facilities, such as warehousing, administration and the gold recovery plant with the Florida Canyon Mine; and four exploration properties located near the Florida Canyon Mine. Mining activities at the Florida Canyon Mine were temporarily suspended on March 1, 2005, although gold production continues from the leach pad. The Standard Mine was developed during 2004 and 2005 and entered into commercial production on June 1, 2005.

3. ACCOUNTING POLICIES

(a) These unaudited consolidated interim financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP") and except as described in Note 9, conform in all material respects with accounting principles generally accepted in the United States ("U.S. GAAP"). The accounting policies followed in preparing these financial statements are those used by the Company as set out in the audited financial statements for the year ended December 31, 2004, except as disclosed in (b) below. Certain information and note disclosures normally included in consolidated financial statements prepared in accordance with Canadian GAAP have been omitted. These interim financial statements should be read together with the Company's audited financial statements for the year ended December 31, 2004.

In the opinion of management, all adjustments considered necessary for fair presentation have been included in these financial statements. Interim results are not necessarily indicative of the results expected for the fiscal year.

Certain of the comparative figures have been reclassified to conform to the current period presentation. In particular, the assets and liabilities of the Nevada Assets as at December 31, 2004 and their results of operations and cash flows for the three and nine months ended September 30, 2004 (Note 4) have been reclassified as held for sale and discontinued operations, respectively.

(b) On March 30, 2005, the Financial Accounting Standards Board ("FASB") ratified the consensus of the Emerging Issues Task Force ("EITF") Issue 04-6 that stripping costs incurred during the production phase of a mine are variable production costs that should be included in the costs of the inventory produced during the period that the stripping costs are incurred.

In the first quarter of 2005 and prior periods, Apollo deferred or accrued stripping costs incurred during production, as appropriate, and charged these costs to operations on the basis of the estimated average stripping ratio for Montana Tunnels. Commencing in the second quarter of 2005, Apollo changed its accounting policy under Canadian GAAP and U.S. GAAP with respect to stripping costs to be consistent with the consensus reached by the EITF, on the basis that the consensus results in a more reliable, relevant and consistent application of GAAP. This change has been applied retrospectively by restating prior periods. The effect of this change was to increase the deficit at January 1, 2004 by \$24,033,000 and to increase the net loss for the year ended December 31, 2004 by \$12,818,000 (\$0.16 per share). The net loss for the three months and nine months ended September 30, 2004 increased by \$4,097,000 (\$0.05 per share) and \$11,446,000 (\$0.15 per share), respectively, as a result of this change.

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements****Nine month period ended September 30, 2005****(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)****(Unaudited)****4. ASSETS HELD FOR SALE**

During the second quarter, the Company adopted a plan to dispose of its Nevada Assets. When management identifies an asset held for sale, the company estimates the net selling price and the Company recorded an impairment in the second quarter 2005 of \$4.6 million. On October 17, 2005, Apollo entered into an agreement with Jipangu for the sale of the Nevada Assets for \$14.0 million, resulting in the Company recording an additional impairment of \$3.9 million, for a total impairment at September 30, 2005 of \$8.4 million.

The following tables present summarized financial information related to discontinued operations:

	September 30, 2005	December 31, 2004

5. SHARE CAPITAL*(a) Shares issued in 2005*

- (i) On January 7, 2005, the Company completed the second tranche of a private placement of 4,199,998 units with a purchase price of \$0.75 for net proceeds of \$2.8 million, net of expenses \$0.3 million and fair value of broker's compensation warrants of \$0.2 million. Each unit is comprised of one common share of the Company and 0.75 share purchase warrant, with each whole share purchase warrant exercisable into one common share of the Company for two years at an exercise price of \$1.00 per share. In connection with the first and second tranches, 1,250,000 broker compensation warrants were issued. (See Note 5(b) for a description of the broker compensation warrants.)

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements

Nine month period ended September 30, 2005

(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)

(Unaudited)

5. SHARE CAPITAL (Continued)

- (ii) During the nine months ended September 30, 2005, the Company restructured its existing earn-in joint venture arrangement with Argonaut at the Huizopa project in Mexico and issued 1,000,000 common shares to Argonaut in consideration for such restructuring. The shares issued were valued at \$410,000 and recorded as property, plant and equipment within the balance sheet. Following this restructuring, the Company's Mexican subsidiary owns Argonaut's former subsidiary which has a contractual interest in two of the concessions at the project and the Company no longer has any earn-in requirement for the project, although it will still be responsible for the underlying payments to the landowner at the project, and the payments and performance or obligations required to maintain those concessions.
- (iii) On June 3, 2005, the Company completed the issuance to Jipangu Inc. ("Jipangu") of 10,000,000 common shares at \$0.32 (Cdn\$0.40) per share for proceeds of \$3.2 million, net of issue expenses of \$32,000. On October 17, 2005, the Company entered into an agreement with Jipangu for the sale of its Nevada Assets for \$14.0 million. In addition, the Company entered into a Subscription Agreement with Jipangu for a \$3.5 million private placement pursuant to which, if the sale of the Nevada Assets is completed, Jipangu would purchase up to 11,650,000 units of Apollo priced at Cdn\$0.35 per unit, with each unit consisting of one common share of Apollo and 0.17167 of a warrant (for a total of up to 2,000,000 warrants) with each whole warrant exercisable for two years at Cdn\$0.39 for one common share of Apollo. If the sale of the Nevada Assets is not completed, Jipangu would have the option to invest up to \$3.5 million in a private placement under certain circumstances.
- (iv) On June 30, 2005, the Company issued 350,000 common shares of the Company and 1,250,000 common share purchase warrants of the Company, with each warrant immediately exercisable into one common share of the company at an exercise price of Cdn\$0.40 and an expiry date of June 30, 2007 to BMO Nesbitt Burns Inc. ("BMO") as an engagement fee to act as a financial adviser to the Company with respect to the sale of the Nevada Assets. In addition, the Company has agreed to issue BMO 900,000 common shares of the Company upon closing of the Agreement to sell the Nevada Assets to Jipangu during the BMO engagement or within the following 12 months.

The 1,250,000 common share purchase warrants were fair valued using an option pricing model with the following assumptions: no dividends are paid, a volatility of the Company's share price of 78%, an expected life of the warrants of two years, and an annual risk-free rate of 3.6%.

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements****Nine month period ended September 30, 2005****(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)****(Unaudited)****5. SHARE CAPITAL (Continued)***(b) Warrants*

The following summarizes outstanding warrants as at September 30, 2005:

Warrants	Number of Shares	Exercise Price	Expiry Date
63,969	63,969	\$ 1.67	October 27, 2005
1,000,000	1,000,000	0.80	October 19, 2006
1,400,133	1,400,133	0.80	November 4, 2006
3,000,000	3,000,000	2.10	December 23, 2006

1,396,000	1,396,000	0.80	November 4, 2007
22,738,699	22,738,699		

In addition, 1,250,000 broker compensation warrants were issued and were immediately exercisable on January 7, 2005. The broker compensation warrants were issued in connection with the first and second tranches of the private placement described in Note 5(a)(i). Each broker compensation warrant is exercisable at \$0.75 into one common share of the Company and 0.75 of a share purchase warrant, with each whole share purchase warrant exercisable into one common share of the Company at \$1.00 per common share. The broker compensation warrants expire on January 7, 2007. The share purchase warrants are exercisable for two years from the date of issue.

The 63,969 warrants with an expiry date of October 27, 2005 expired unexercised.

(c) Options

A summary of information concerning outstanding stock options at September 30, 2005 is as follows:

100,000	August 4, 2015		0.27	-	-
4,082,600		\$	1.19	1,311,600	\$ 2.14

(ii) Performance-based stock option plan

As at September 30, 2005, the 1,794,582 performance-based stock options were fully vested and have an expiry date of June 25, 2007.

(d) Stock-based compensation

The fair value of each option granted is estimated at the time of grant using the Black-Scholes option pricing model with weighted average assumptions for grants as follows:

**Nine months ended
September 30,**

	2005	2004
Risk free interest rate	3.8%	3.1%
Dividend yield	0%	0%
Volatility	74%	56%
Expected life in years	5	5

6. INCOME TAXES

The Company did not record a recovery for income taxes for the period ended September 30, 2005 as the net loss carry forwards are fully offset by a valuation allowance.

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements****Nine month period ended September 30, 2005****(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)****(Unaudited)****7. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT***Commodity contracts*

In 2003 the Company entered into commodity contracts with Standard Bank London Limited for gold in the aggregate amount of 100,000 ounces involving the use of combinations of put and call options. As of September 30, 2005 there were no ounces remaining on these contracts. The contracts gave the holder the right to buy, and the Company the right to sell, stipulated amounts of gold with a put option strike price of \$295 per ounce and a call option strike price of \$345 per ounce.

The Company incorrectly accounted for the above commodity contracts with Standard Bank London Limited as hedges during each of the quarters ended March 31, June 30 and September 30, 2004, respectively. Quarterly losses for 2004 have been restated to reflect the correct accounting treatment for these commodity contracts. The previously reported and restated information as at and for the three and nine month periods ended September 30, 2004 is disclosed below:

	Three months ended September 30, 2004		Nine months ended September 30, 2004	
	As reported	As restated	As reported	As restated

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements****Nine month period ended September 30, 2005****(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)****(Unaudited)****8. SEGMENTED INFORMATION**

Apollo operates the Montana Tunnels Mine in the United States and owns the Black Fox development project in Canada. The reportable segments have been determined at the level where decisions are made on the allocation of resources and capital and where performance is measured. The Nevada Assets have been reported as discontinued operations (Note 4). The accounting policies for these segments are the same as those followed by the Company as a whole.

Amounts as at September 30, 2005 are as follows:

	Montana Tunnels		Black Fox		Corporate and Other		Total

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements****Nine month period ended September 30, 2005****(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)****(Unaudited)****9. DIFFERENCES BETWEEN CANADIAN AND U.S. GAAP (Continued)***(a) Stock-based compensation*

Under Canadian GAAP, effective January 1, 2004, the Company adopted the amended recommendations of the Canadian Institute of Chartered Accountants (CICA) Handbook Section 3870. Under U.S. GAAP, effective January 1, 2004, the Company adopted the modified prospective method of accounting for stock-based compensation recommended in Statement of Financial Accounting Standards ("SFAS") 148, *Accounting for Stock-Based Compensation - Transition and Disclosure*. Prior to January 1, 2004, the Company measured its employee stock-based awards using the intrinsic value method prescribed by APB No. 25, *Accounting for Stock Issued to Employees*.

(b) Impairment of property, plant and equipment

Under Canadian GAAP, write-downs for impairment of property, plant and equipment are determined using current proven and probable reserves and mineral resources expected to be converted into mineral reserves. In 2002, under U.S. GAAP, write-downs were determined using proven and probable reserves. Accordingly, for U.S. GAAP purposes, an impairment of property, plant and equipment was recorded and an adjustment to the related depreciation expense has been recorded.

(c) Black Fox Project

Under Canadian GAAP, mining development costs at the Black Fox Project have been capitalized. Under U.S. GAAP, these expenditures are expensed as incurred, pending completion of a feasibility study. Accordingly, for U.S. GAAP purposes, a reduction in property, plant and equipment of \$18.4 million has been recorded as at September 30, 2005.

(d) Convertible debenture

(i) Under Canadian GAAP, the convertible debentures issued in November 2004 were recorded as a compound financial instrument including detachable note warrants. Under U.S. GAAP, the detachable note warrant is similarly treated as an equity instrument with the remainder of the convertible debentures treated as a liability. Further, under U.S. GAAP, the beneficial conversion feature determined using the effective conversion price based on the proceeds allocated to the convertible debenture in accordance with EITF 00-27, "Application of Issue No. 98-5 to Certain Convertible Instruments", is allocated to contributed surplus. This discount on the debenture is recognized as additional interest expense immediately as the debt is convertible at the date of issuance. Canadian GAAP does not require the recognition of any beneficial conversion feature.

(ii) Under Canadian GAAP, the convertible debentures were recorded as an equity instrument on issuance in March 2002. Under U.S. GAAP, on issuance, the convertible debenture would have been recorded as a liability and reclassified to equity only upon conversion. Further, under U.S. GAAP, the beneficial conversion feature represented by the excess of the fair value of the shares and warrants issuable on conversion of the debenture, measured on the commitment

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements****Nine month period ended September 30, 2005****(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)****(Unaudited)****9. DIFFERENCES BETWEEN CANADIAN AND U.S. GAAP (Continued)***(d) Convertible debenture (Continued)*

date, over the amount of the proceeds to be allocated to the common shares and warrants upon conversion, would be allocated to contributed surplus. This results in a discount on the debenture that is recognized as additional interest expense over the term of the debenture and any unamortized balance is expensed immediately upon conversion of the debenture. Accordingly, for U.S. GAAP purposes, the Company has recognized a beneficial conversion feature and debenture issuance costs of \$20.7 million in the year ended December 31, 2002. Canadian GAAP does not require the recognition of any beneficial conversion feature.

(e) Non-current assets held for sale (Commodity contracts)

Prior to January 1, 2004 under U.S. GAAP unrealized gains and losses on the put and call option contracts were recorded in the statement of operations. As of January 1, 2004, the Company adopted the provisions of Accounting Guideline 13 and unrealized gains and losses on these contracts are now recorded in the statement of operations under Canadian GAAP. As described in Note 7, quarterly losses for 2004 have been restated to reflect the correct accounting treatment for these commodity contracts in accordance with Canadian GAAP. Similarly, under U.S. GAAP the Company incorrectly accounted for the unrealized loss on cash flow hedges as a component of comprehensive loss, rather than net loss for the period.

(f) Flow-through common shares

Under Canadian income tax legislation, a company is permitted to issue shares whereby the company agrees to incur qualifying expenditures and renounce the related income tax deductions to the investors. The Company has accounted for the issue of flow-through shares using the deferral method in accordance with Canadian GAAP. At the time of issue, the funds received are recorded as share capital. For U.S. GAAP, the premium over (discount from) market value is credited (debited) to other liabilities (deferred costs) and included in income as the qualifying expenditures are made.

Also, notwithstanding whether there is a specific requirement to segregate the funds, the flow-through funds which are unexpended at the consolidated balance sheet dates are considered to be restricted and are not considered to be cash or cash equivalents under U.S. GAAP. As at September 30, 2005, unexpended flow-through funds were \$0.1 million (December 31, 2004 - \$0.6 million).

(g) Comprehensive income

SFAS No. 130, *Reporting Comprehensive Income* ("SFAS 130") requires that all items that are required to be recognized under accounting standards as components of comprehensive income be reported in a financial statement. For the Company, the only component of comprehensive loss is the net loss for the period.

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements

Nine month period ended September 30, 2005

(Stated in United States Dollars; tabular amounts in thousands, except for share and per share amounts)

(Unaudited)

9. DIFFERENCES BETWEEN CANADIAN AND U.S. GAAP (Continued)

(h) Commencement of operations at Standard Mine

According to Canadian GAAP the Standard Mine was not in commercial production until June 1, 2005. Under U.S. GAAP, commercial production begins when construction is complete and saleable minerals are produced which was March 1, 2005. Accordingly for U.S. GAAP purposes an addition of current assets held for sale of \$0.3 million, a reduction in non-current assets held for sale of \$1.1 million, and an increase in net loss of \$0.8 million has been recorded at September 30, 2005.

10. SUBSEQUENT EVENTS

(a) Signed Sales Agreement for Sale of Nevada Assets, related Private Placement and Advance

On October 17, 2005 a binding stock purchase agreement (the "Agreement") was signed with Jipangu Inc. for the sale of the Nevada Assets for \$14 million (the "Mines Sale"), subject to certain conditions. In addition, Apollo and Jipangu have entered into a subscription agreement for a \$3.5 million private placement under which Jipangu would purchase up to 11,650,000 units of Apollo priced at Cdn\$0.35 per unit, with each unit consisting of one common share of Apollo and 0.17167 of a warrant (for a total of up to 2,000,000 warrants), with each whole warrant exercisable for two years at Cdn\$0.39 for one common share. If the private placement were completed and the warrants were exercised, Jipangu would own in the aggregate 19.7% of Apollo's common shares based on 106,556,451 common shares outstanding as of October 17, 2005.

The Company expects that the Mines Sale will close on November 18, 2005. Pursuant to the Agreement, if the Mines Sale does not close by December 1, 2005, either Apollo or Jipangu may terminate the Agreement, provided that the terminating party has not breached the Agreement in a manner that has prevented the closing. The \$3.5 million private placement is conditional upon the completion of the Mines Sale, and would not close until the 61st day after the closing of the Mines Sale. If the Mines Sale is not completed, Jipangu would have the option to invest up to \$3.5 million in a private placement under certain circumstances.

Also, on October 17, 2005, pursuant to the Agreement, Jipangu advanced Apollo \$2.5 million and Apollo issued Jipangu a \$2.5 million promissory note due June 1, 2006. The note is non-interest bearing through December 1, 2005, after which the note will bear interest at 7.3% per annum. At the closing of the Mines Sale, the \$2.5 million advance would be credited toward the \$14 million purchase price in full satisfaction of the indebtedness evidenced by the note.

(b) Temporary Suspension of Mining at Montana Tunnels

In October 2005, due to increased wall activity in the eastern side of the open pit, the Company decided to temporarily suspend mining at Montana Tunnels. Although access to the pit is still possible, it is not within acceptable Apollo safety standards and the Company has commenced, with the assistance of outside consultants, a technical review of pit access options and safety issues affecting the mine. In the meantime, the Company plans to continue milling low grade ores from stockpile material and is currently unable to predict the effect on its financial results. An estimate of the financial effect of this event cannot be made until the technical review is completed.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

All Dollar amounts are expressed in United States Dollars

The following discussion and analysis should be read in conjunction with the accompanying consolidated financial statements and related notes. The financial statements have been prepared in accordance with generally accepted accounting principles in Canada (Canadian GAAP). For a reconciliation to GAAP in the United States (U.S. GAAP), see Note 9 to the attached consolidated financial statements.

In this Form 10-Q, the terms "cash operating cost", "total cash cost" and "total production cost" are non-GAAP financial measures and are used on a per ounce of gold sold basis. Cash operating costs per ounce is equivalent to direct operating cost as found on the Consolidated Statements of Operations, less production royalty expenses and mining taxes but includes by-product credits for payable silver, lead, and zinc production. Total cash costs is equivalent to cash operating costs plus production royalties and mining taxes. The term "total production costs" is equivalent to total cash costs plus non-cash costs including depreciation and amortization.

The Montana Tunnels results of operations have been restated for all periods presented December 31, 2004 and earlier to reflect a change in accounting policy with respect to stripping costs.

Additionally, certain of the comparative figures have been reclassified to conform with the current period presentation. In particular, the results of operations of the Florida Canyon Mine and the Standard Mine for the three and nine months ended September 30, 2004 have been classified as discontinued operations and therefore the table below reflects Montana Tunnels statistics only.

RECONCILIATION OF CASH OPERATING AND TOTAL PRODUCTION COSTS PER OUNCE

(\$ in thousands)	Three months ended September 30,		Nine months ended September 30,	
	2005	2004 (as restated)	2005	2004 (as restated)
Gold ounces sold	14,104	4,967	39,073	21,653
Direct operating costs	\$ 14,162	\$ 12,627	\$ 40,273	\$ 39,815
Less: Mining taxes, royalty expenses	345	212	932	685
By-product credits	6,929	5,351	19,280	16,918
Cash operating cost	6,888	7,064	20,061	22,212
Cash operating cost per ounce	\$ 488	\$ 1,422	\$ 513	\$ 1,026
Cash operating costs	6,888	7,064	20,061	22,212
Add: Mining taxes, royalty expenses	345	212	932	685
Total cash costs	7,233	7,276	20,993	22,897
Total cash cost per ounce	\$ 513	\$ 1,465	\$ 537	\$ 1,057
Total cash costs	7,233	7,276	20,993	22,897
Add: Depreciation & amortization (operations only)	615	646	1,885	1,823
Total production costs	7,848	7,922	22,878	24,720
Total production cost per ounce	\$ 556	\$ 1,595	\$ 586	\$ 1,142

We have included total cash cost and cash operating cost information to provide investors with information about the cost structure of our mining operation. We use this information for the same purpose and for monitoring the performance of our operation. This information differs from measures of performance determined in accordance with

Canadian and U.S. GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with Canadian and U.S. GAAP. These measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP and may not be comparable to similarly titled measures of other companies.

25

The following presents a discussion of the financial condition and results of operations of the Company for the three and nine months ended September 30, 2005 and September 30, 2004, respectively.

BACKGROUND AND RECENT DEVELOPMENTS

We are principally engaged in the exploration, development and mining of gold. We own Black Fox, a development property located east of Timmins, Ontario, Canada. We also own a concession and the right to acquire additional concessions to the Huizopa exploration property in Mexico. In addition, we own and operate the Montana Tunnels Mine, a gold, silver, lead and zinc open pit mine, located near Helena, Montana and the Diamond Hill Mine, currently under care and maintenance, also located in the State of Montana.

Recent Events.

Nevada Assets

On October 17, 2005, we entered into a Stock Purchase Agreement (the "Agreement") with Jipangu Inc. ("Jipangu"), a Delaware corporation and wholly owned subsidiary of Jipangu International Inc., a Japanese corporation ("Jipangu Parent"), for the sale of all of the issued and outstanding stock of Florida Canyon Mining, Inc., Standard Gold Mining, Inc. and Apollo Gold Exploration, Inc. for \$14.0 million (the "Mines Sale"), subject to certain conditions. In addition, we entered into a Subscription Agreement with Jipangu for a \$3.5 million private placement (the "Private Placement"), pursuant to which Jipangu would purchase up to 11,650,000 units of Apollo priced at Cdn\$0.35 per unit, with each unit consisting of one common share of Apollo and 0.17167 of a warrant (for a total of up to 2,000,000 warrants), with each whole warrant exercisable for two years at Cdn\$0.39 for one common share of Apollo.

If the Private Placement were completed and the warrants were exercised, Jipangu would own in the aggregate 19.7% of Apollo's common shares based on 106,556,451 common shares outstanding as of November 7, 2005.

The closing of the Mines Sale under the Agreement is subject to certain conditions and we expect that the Mines Sale will close on November 18, 2005. If the Mines Sale does not close by December 1, 2005, either Apollo or Jipangu may terminate the Agreement, provided that the terminating party has not breached the agreement in a manner that has prevented the closing. The Private Placement is conditional upon the completion of the Mines Sale, and would not close until the 61st day after the closing of the Mines Sale. If the Mines Sale is not completed, Jipangu would have the option to invest up to \$3.5 million in a private placement under certain circumstances.

Black Fox

As a result of the contemplated Mines Sale, we are focusing and concentrating our resources on the development of the Black Fox project which we believe is the future of the Company. An additional 30 underground diamond drill holes were completed during the third quarter 2005 bringing the total number of underground holes to date to 335, with the total number of drill holes completed, including surface holes, to 784 at September 30, 2005. We expect to complete the current drilling program in November 2005 and the Company has commenced work on updating our reserve calculations at Black Fox, which will be published first quarter 2006.

Montana Tunnels

The Montana Tunnels mine was acquired by Apollo in the second quarter 2002 and following a four month stripping program of waste rock removal, the mine commenced limited production of ore in October 2002, with full commercial production recommencing in April 2003. Since that time the mine has experienced pit wall problems that have resulted in periodic disruption of production and several significant changes to mining plans, including in late 2003 the commencement of the phase two stripping program to remove 25 million tons of material that slid off the

southwest pit wall. This strip program was completed at the end of 2004 and the mine was then expected to have a 3 year mine life before a further pit expansion program was required. The result of these interruptions to normal operations has meant that the mine has failed to meet production expectations or forecasted cash costs per ounce of gold since recommencing operation in 2003. We monitor the wall movement on a daily basis and the movement of the wall above the haul ramp, although steady throughout 2004 and the first quarter of 2005, was consistent with the type of movement experienced historically and the Company believes it is manageable.

During May and June 2005 the mine again encountered production problems caused by the deterioration of the haul ramp leading to periodic ramp closures as a result of increased wall activity caused by excessive continuous rainfall, with June 2005 recorded as the third wettest month on record for Jefferson County. In June 2005 the mine plan was again revised to allow a two week shutdown to allow the mine to unload some upper slopes of the open pit and improve the haulage ramp. The two weeks of remediation work was carried out in July 2005, as planned, and production at the mine improved during August and September 2005. However during October there was again increased wall activity on the eastern side of the open pit above the haul ramp. Although the pit is still accessible, we decided to temporarily suspend mining on October 21, 2005 to undertake, with the assistance of outside consultants, a technical review of pit access options and safety issues affecting the mine. In the meantime, we plan to continue milling low grade ores from stockpile material and are currently unable to predict the effect on our financial results.

Summary of Production Results and Total Cash Costs per Ounce from Continuing Operations

Production from Continuing Operations & Metals Price Averages

The table below summarizes our production of gold, silver and other metals, as well as average metal prices, for each period indicated:

	Nine months ended September 30, 2005	Year Ended December 31, 2004	Year Ended December 31, 2003
Production:			
Gold (ounces)	39,073	33,743	44,124
Silver (ounces)	421,479	970,751	411,176
Lead (pounds)	9,273,121	10,064,265	10,843,184
Zinc (pounds)	19,800,021	26,222,805	21,792,452
Average metal prices:			
Gold - London bullion mkt. (\$/ounce)	\$ 431	\$ 409	\$ 364
Silver - London bullion mkt. (\$/ounce)	\$ 7.06	\$ 6.66	\$ 4.88
Lead - LME (\$/pound)	\$ 0.43	\$ 0.40	\$ 0.23
Zinc - LME (\$/pound)	\$ 0.59	\$ 0.48	\$ 0.38

For the three months ended September 30, 2005, gold production from continuing operations increased 184% to 14,104 ounces, zinc production increased 98% to 7,400,000 lbs, and lead production increased 61% to 3,389,000 lbs from 4,967 ounces of gold, 3,738,000 lbs of zinc, and 2,110,000 lbs of lead for the three months ended September 30, 2004, respectively. For the nine months ended September 30, 2005, gold production from continuing operations increased 80% to 39,073 ounces, zinc production increased 6% to 19,800,000 lbs, and lead production increased 33% to 9,273,000 lbs from 21,653 ounces of gold, 18,753,000 lbs of zinc, and 6,978,000 lbs of lead for the nine months ended September 30, 2004, respectively.

For the three months ended September 30, 2005, total cash cost per ounce of gold from continuing operations decreased 65% to \$513 from \$1,465 for the three months ended September 30, 2004. Production in 2004 was significantly reduced due to a major stripping program and the processing of lower grade and below reserve grade ores. For the nine months ended September 30, 2005, total cash cost per ounce of gold from continuing operations decreased 49% to \$537 from \$1,057 for the nine months ended September 30, 2004. The improvement in cash cost per ounce is due to higher production of metals as a result of better grades of ore and higher prices of zinc and lead. However, the total cash cost per ounce still remained above the selling price per ounce of gold primarily due to poor mining performance, resulting from ramp access and pit wall problems.

MATERIAL CHANGES IN RESULTS OF OPERATIONS

Three Months Ended September 30, 2005 Compared to the Three Months Ended September 30, 2004

Revenue from the Sale of Minerals from Continuing Operations.

Revenues from continuing operations for the three months ended September 30, 2005 increased 81% to \$13.4 million from \$7.4 million for the same period in 2004. Revenues from silver, zinc and lead for the three months ended September 30, 2005 increased 28% to \$6.9 million from \$5.4 million for the three months ended September 30, 2004. Revenue from gold sales for the three months ended September 30, 2005 were \$6.4 million, (48% of total revenue) compared to \$2.0 million (28% of the total revenue) for the same period 2004. Revenue from zinc at \$4.7 million for the three months ended September 30, 2005 accounted for 35% of total revenues. The average price received for gold per ounce for the three months ended September 30, 2005 increased 11% to \$455 from \$411 for the three months ended September 30, 2004. The increase in revenues is due to increased production and higher prices of zinc and lead.

Continuing Operations - Montana Tunnels.

The following presents the key statistics for the Montana Tunnels operation for the three months ended September 30, 2005 and 2004, respectively:

	Three months ended September 30,	
	2005	2004 (as restated)
Tons mined	4,217,617	9,789,823
Tons milled	1,299,610	1,514,690
Gold grade oz/ton	0.0150	0.0059
Zinc grade %	0.42	0.20
Strip ratio	3.2:1	6.5:1
Production payable:		
Gold ounces	14,104	4,967
Silver ounces	129,736	425,351
Lead pounds	3,389,443	2,110,786
Zinc pounds	7,401,636	3,738,427
Total cash costs per ounce	\$ 513	\$ 1,465
Total production costs per ounce	\$ 556	\$ 1,595
Total revenue (\$ millions)	\$ 13.4	\$ 7.4
Capital expenditures (\$ millions)	\$ 0.1	\$ 1.1

Due to the lower strip ratio required, the total mined tonnage during the three months ended September 30, 2005 was 4,217,617 tons compared to 9,789,823 tons mined in the same period of 2004, a reduction of 57%. Of the total mined

for the three months ended September 30, 2005, 1,299,610 tons were ore, resulting in a strip ratio of 3.2:1 for the quarter, which was higher than expected for the three months ended September 30, 2005, but lower than the strip ratio for the three months ended September 30, 2004 of 6.5:1.

The improvement in the third quarter 2005, compared to the third quarter 2004, in production and total cash cost per ounce is a result of higher grades of ore, particularly gold (0.0150 oz/ton compared to 0.0059 oz/ton) and zinc (0.42% compared to 0.20%), the combined revenues of which account for 83% of total revenues. This improvement in revenue was partially offset by increased direct operating costs.

Operating Expenses.

Direct Operating Costs. Direct operating costs, which includes mining costs, processing costs, and smelting and refining charges, for the three months ended September 30, 2005 increased 13% to \$14.2 million from \$12.6 million for the three months ended September 30, 2004, although there was a decrease in mined tons of 57% to 4,217,617 tons from 9,789,823 tons for the three months ended September 30, 2004. The mining cost per ton for the three months ended September 30, 2005 was \$1.54 compared to \$0.66 for the three months ended September 30, 2004. The two primary reasons for the increase in mining costs are: (i) in 2004 the majority of the material mined was waste from the upper benches of the pit requiring shorter uphill haul distances and therefore better efficiencies when compared to 2005, where mining was mainly from the pit bottom, and (ii) the significant increases in the prices of our mining consumables, such as diesel and tires, both of which have increased by over 100% since September 30, 2004. In addition to mining costs, the smelter charges for the three months ended September 30, 2005 increased 103% to \$3,027,000 from \$1,489,000 for the three months ended September 30, 2004, primarily due to the increased mine production of lead and zinc concentrates being processed by the smelter, along with a higher smelting charge per ton of concentrate due to the increase in the price of lead and zinc. Our smelting contract has a price participation clause which provides that as the prices of lead and zinc increase the benefit gained by the mine is shared with the smelter and vice-versa. The average price of zinc for the three months ended September 30, 2005 was \$0.59/lb compared to \$0.48/lb for the three months ended September 30, 2004.

Depreciation and Amortization. Depreciation and amortization expenses were \$0.7 million and \$0.7 million for the three months ended September 30, 2005 and 2004, respectively.

General and Administrative Expenses. General and administrative expenses were \$0.9 million and \$1.1 million for the three months ended September 30, 2005 and 2004, respectively.

Stock Based Compensation. In January 2004, the Company adopted the fair value method of accounting for stock options as set out in CICA Handbook section 3870, Stock-Based Compensation and Other Stock-Based Payments. Share-based compensation was \$171,000 and \$388,000 for the three months ended September 30, 2005 and 2004, respectively.

Accretion Expense. Accrued accretion expense was \$242,000 compared to \$479,000 for the three months ended September 30, 2005 and 2004, respectively, primarily due to accrued site closure costs at the Montana Tunnels mine.

Exploration and Business Development Expense. Expenses for exploration and development, consisting of drilling and related expenses at our exploration properties, totaled approximately \$0.2 million and \$0.5 million for the three months ended September 30, 2005 and 2004, respectively. This decrease in expenditures is due to decreased exploration activities at our Huizopa property in Mexico.

Total Operating Expenses. As a result of these expense components, our total operating expenses increased 3% to \$16.3 million for the three months ended September 30, 2005 from \$15.8 million for the three months ended September 30, 2004.

Interest Income and Interest Expense. We realized interest income of \$105,000 during the three months ended September 30, 2005 and interest expense of \$747,000 in the same period compared to \$10,000 in interest income and \$30,000 in interest expense during the three months ended September 30, 2004. The interest income increase is partially due to increased income earned on reclamation bonding deposits. The increase in interest expense is due to accretion on the convertible debentures issued in the fourth quarter of 2004.

Foreign Exchange Gain (Loss). There was a foreign exchange gain of \$5,000 for the three months ended September 30, 2005 compared to a \$79,000 loss during the three months ended September 30, 2004 from cash balances held in Canadian dollars. Apollo utilizes United States dollars as its functional and reporting currency.

Loss from Continuing Operations.

As a result of the foregoing, the Company incurred a loss from continuing operations of \$3.6 million, or \$0.03 per share, for the three months ended September 30, 2005, as compared to a loss of \$8.5 million, or \$0.11 per share, for the three months ended September 30, 2004.

Loss from Discontinued Operations.

During the second quarter, the Company adopted a plan to dispose of its Nevada Assets. For the three months ended September 30, 2005, we recorded an impairment of \$3.9 million related to the Nevada Assets. This component, when added to the results from the discontinued operations means that the Company incurred a total loss for the three months ended September 30, 2005 of \$3.6 million, or \$0.03 per share, as compared to a loss of \$2.8 million, or \$0.03 per share, for the three months ended September 30, 2004.

Discontinued Operations.

Florida Canyon. Florida Canyon's gold production decreased 58% to 6,169 ounces at a total cash cost of \$409 per ounce for the three months ended September 30, 2005 from 14,820 ounces of gold at a total cash cost of \$406 per ounce for the three months ended September 30, 2004, primarily due to cessation of mining on March 1, 2005.

We had planned to mine throughout 2005, however, management determined at the end of February 2005 to focus its personnel and resources on the Standard Mine and therefore the decision was taken to temporarily suspend mining activity from March 1, 2005 and to continue to produce gold at Florida Canyon by leaching down the gold contained within the existing pad.

	Three months ended September 30,	
	2005	2004 (as restated)
Tons mined	0	4,235,978
Gold production - ounces	6,169	14,820
Silver production - ounces	3,054	12,154
Total cash costs per ounce	\$ 409	\$ 406
Total production costs per ounce	\$ 409	\$ 447
Total revenue (\$ millions)	\$ 2.7	\$ 5.0
Capital expenditures (\$ millions)	\$ 0.0	\$ 0.7

There was no net gain or loss for the three months ended September 30, 2005 as compared to a \$646,000 loss for the three months ended September 30, 2004, due to the last of the Standard Bank put/call commodity contracts being completed in April 2005.

Standard Mine. Standard Mine entered into commercial production on June 1, 2005. Loading of ore onto the heap leach pad continued throughout the third quarter 2005 enabling the expansion of the area under leach and therefore improved production of gold. Standard Mine produced 8,432 ounces of gold during the three months ended September 30, 2005 at a total cash cost of \$387 per ounce.

Following are key operating statistics at the Standard Mine for the third quarter of 2005 compared to 2004:

	Three months ended September 30,		
	2005	2004	Not in production
Ore mined - tons	1,428,103		
Waste mined - tons	1,136,718		
Total tons mined	2,564,821		
Strip ratio	0.8:1		
Grade of gold - ozs/ton	0.0151		
Gold production - ounces	8,432		
Silver production - ounces	21,901		
Total cash costs per ounce	\$ 387		
Total production costs per ounce	\$ 387		
Total revenue (\$ millions)	\$ 3.9		
Capital expenditures (\$ millions)	\$ 0.5	\$ 1.9	

During the three months ended September 30, 2005, 2,565,000 tons were mined, of which 1,428,000 tons were ore with the balance being waste, resulting in a strip ratio of 0.8:1. This strip ratio is equal to the average expected for the year 2005. All ore tons were placed on the pad at an average grade of 0.0151 ounces per ton.

Capital expenditure for the third quarter 2005 was \$0.5 million compared to \$1.9 million in the third quarter of 2004. This lower expenditure is because the mine was under construction in 2004.

NINE MONTHS ENDED SEPTEMBER 30, 2005 COMPARED TO THE NINE MONTHS ENDED SEPTEMBER 30, 2004

Revenue from the Sale of Minerals from Continuing Operations.

Revenues from continuing operations for the nine months ended September 30, 2005 increased 42% to \$36.3 million from \$25.5 million for the same period in 2004. Revenues from silver, zinc and lead for the nine months ended September 30, 2005 increased 14% to \$19.3 million from \$16.9 million for the nine months ended September 30, 2004. Revenue from gold sales for the nine months ended September 30, 2005 were \$17.0 million, (47% of total revenue) compared to \$8.6 million (34% of the total revenue) for the same period 2004. Revenue from zinc at \$12.3 million for the nine months ended September 30, 2005 accounted for 34% of total revenues. The average price received for gold per ounce for the nine months ended September 30, 2005 increased 9% to \$435 from \$398 for the nine months ended September 30, 2004. The increase in revenues is primarily due to increased production due to higher prices of zinc and lead.

Continuing Operations - Montana Tunnels.

The following presents the key production statistics for the Montana Tunnels operation for the nine months ended September 30, 2005 and 2004, respectively.

	Nine months ended September 30,	
	2005	2004 (as restated)
Tons mined	13,606,591	27,578,156
Tons milled	3,965,389	3,780,791
Production:		
Gold grade oz/ton	0.014	0.009
Zinc grade %	0.36	0.38
Gold ounces	39,073	21,653
Silver ounces	421,479	769,020
Lead pounds	9,273,121	6,978,014
Zinc pounds	19,800,021	18,753,013
Total cash costs per ounce	\$ 537	\$ 1,057
Total production costs per ounce	\$ 586	\$ 1,142
Total revenue (\$ millions)	\$ 36.3	\$ 25.5
Capital expenditures (\$ millions)	\$ 0.2	\$ 2.2

Due to the lower strip ratio planned, the total mine tonnage moved during the nine months ended September 30, 2005, was 13,606,591 tons compared to 27,578,156 tons mined for the nine months ended September 30, 2004. Of the total mined in the first nine months of 2005, 4,038,000 were ore giving a strip ratio for the year-to-date of 2.4:1 which was slightly higher than expected. This compares to ore mined in the first nine months of 2004 of 4,076,000 tons for a strip ratio of 5.8:1.

The higher total cash costs in 2004 are a result of the implementation of the FASB recommendation on stripping costs.

Operating Expenses.

Direct Operating Expenses. Direct operating costs, which includes mining costs, processing costs and smelting and refining charges, for the nine months ended September 30, 2005 increased 1% to \$40.3 million from \$39.8 million for the nine months ended September 30, 2004, although there was a decrease in mined tonnage of 51% to 13,606,591 tons from 27,578,156 tons for the nine months ended September 30, 2004. These higher than expected costs were a result of operational problems encountered in the mine and higher unit costs of operational supplies when compared to 2004. The operational problems were weather related problems in the second quarter 2005, resulting in problems with access to the ramp and lower tons being mined. The higher unit costs of operational supplies are a result of the significant increase in the cost of consumables such as diesel and tires, both of which have increased by over 100% during the past twelve months.

Depreciation and Amortization Expenses. Depreciation and amortization expenses were \$2.0 million for the nine months ended September 30, 2005 as compared to \$1.9 million for the same period 2004.

General and Administrative Expenses. General and administrative expenses were \$3.7 million for the nine months ended September 30, 2005 as compared to \$4.3 million from the first nine months ended September 30, 2004 primarily due to no management bonuses being paid in 2005.

Stock Based Compensation. In January 2004 the Company adopted the fair value method of accounting for stock options as set out in CICA Handbook section 3870, Stock-Based Compensation and Other Stock-Based Payments. Share-based compensation was \$0.5 million for both the nine months ended September 30, 2005 and the same period of 2004.

Accretion Expense. Accrued accretion expense was \$0.6 million for the nine months ended September 30, 2005 compared to \$0.6 million for the same period of 2004, due to accrued site closure costs at the Montana Tunnels mine.

Expenses for Exploration and Development. Expenses for exploration and development, consisting of drilling and related expenses at our exploration properties, totaled approximately \$0.7 million and \$0.8 million for the nine months ended September 30, 2005 and 2004, respectively.

Total Operating Expenses. As a result of these expense components, our operating expenses totaled approximately \$47.9 million for the nine months ended September 30, 2005 and 2004, respectively.

Interest Income and Interest Expense. Apollo realized interest income of \$278,000 during the nine months ended September 30, 2005 and interest expense of \$1,940,000 in the same period compared to \$261,000 in interest income and \$113,000 in interest expense during the nine months ended September 30, 2004. The increase in interest expense is due to accretion on the convertible debentures issued in the fourth quarter of 2004.

Gain on Sale of Property, Plant and Equipment. A \$1.3 million gain on sale of spare mining equipment at Montana Tunnels was realized during the first nine months ended September 30, 2005.

Foreign Exchange Loss. There was a foreign exchange loss of \$28,000 for the nine months ended September 30, 2005 compared to a \$567,000 loss during the nine months ended September 30, 2004 from cash balances held in Canadian dollars. Apollo utilizes United States dollars as its functional and reporting currency.

Loss from Continuing Operations.

As a result of the foregoing, the Company incurred a loss from continuing operations of \$12.0 million, or \$0.12 per share, for the nine months ended September 30, 2005, as compared to a loss of \$22.7 million, or \$0.29 per share, for the nine months ended September 30, 2004.

Loss from Discontinued Operations.

During the second quarter, the Company adopted a plan to dispose of its Nevada Assets. For the nine months ended September 30, 2005, we recorded a total impairment of \$8.4 million related to the Nevada Assets. This impairment when added to the results from the discontinued operations meant that the Company incurred a total loss for the nine months ended September 30, 2005 of \$6.0 million, or \$0.06 per share, as compared to a loss of \$2.5 million, or \$0.03 per share, for the nine months ended September 30, 2004.

Discontinued Operations.

Florida Canyon. At Florida Canyon, production of gold decreased by 55% to 24,765 ounces at a total cash cost of \$380 per ounce for the nine months ended September 30, 2005 from 55,649 ounces of gold at a total cash cost of \$354 per ounce for the nine months ended September 30, 2004 primarily due to the cessation of mining on March 1, 2005. The total cash cost for the nine months ended September 30, 2005 of \$380 per ounce includes a non cash charge from leach pad inventory of \$225 per ounce of gold.

We had planned to continue mining at Florida Canyon throughout 2005, however, management determined at the end of February 2005 to focus its personnel and resources on the Standard Mine and therefore the decision was taken to temporarily suspend mining activity from March 1, 2005 and to continue to produce gold by leaching down the gold contained within the existing pad at Florida Canyon.

Following are key operating statistics at Florida Canyon for the nine months of 2005 compared to 2004:

	Nine months ended September 30,	
	2005	2004 (as restated)
Tons mined	960,292	17,102,792
Gold production - ounces	24,765	55,649
Silver production - ounces	15,583	49,368
Total cash costs per ounce	\$ 380	\$ 354
Total production costs per ounce	\$ 412	\$ 390
Total revenue (\$ millions)	\$ 9.5	\$ 20.1
Capital expenditures (\$ millions)	\$ 0.0	\$ 1.1

A \$3.6 million gain on sale of spare mining equipment at Florida Canyon was realized during the nine months ended September 30, 2005.

There was a \$38,000 gain for the nine months ended September 30, 2005 for the commodities contract with Standard Bank as compared to a \$516,000 gain for the nine months ended September 30, 2004. This commodities contract was finished in April 2005.

Standard Mine. The Standard Mine continued loading ore onto the heap leach pad, leaching gold and expanding the area under leach during the first nine months of 2005.

The Standard Mine entered into commercial production on June 1, 2005. Under Canadian GAAP it was determined that due to construction of the plant only being completed in late February 2005, coupled with the limited number of leach fields available, the mine was not in production in the first five months of 2005. The Standard Mine produced 11,241 ounces of gold during the four months June to September at a total cash cost of \$380 per ounce. For the first five months of 2005 the mine produced 6,731 ounces of gold, the revenue which was offset against the operating expenses and the net sum treated as capital expenditures.

Following are key operating statistics at the Standard Mine for the first nine months of 2005 compared to 2004:

	Nine months ended September 30,	
	2005	2004 Not in production
Ore mined - tons	1,887,360	
Waste mined - tons	1,675,846	
Total tons mined	3,563,206	
Strip ratio	0.9:1	
Grade of gold ozs/ton	0.0166	
Gold production - ounces	11,241	
Silver production - ounces	30,916	
Total cash costs per ounce	\$ 380	
Total production costs per ounce	\$ 380	
Total revenue (\$ millions)	\$ 5.2	
Capital expenditures (\$ millions)	\$ 2.9	\$ 5.1

During the first nine months of 2005, tons mined were slightly above forecast at 3,563,206 tons of which 1,887,360 tons were ore with the balance being waste giving a strip ratio of 0.9:1. This strip ratio was slightly higher than the average expected for the year 2005 of 0.8:1. All ore tons were placed on the pad at an average grade of 0.0166 ounces per ton.

Capital expenditures for the first nine months of 2005 were \$2.9 million, \$2.2 million lower than the same period 2004.

MATERIAL CHANGES IN LIQUIDITY

To date, we have funded our operations primarily through issuances of debt and equity securities. At September 30, 2005, cash and cash equivalents were \$0.3 million, compared to cash and cash equivalents of \$6.9 million at December 31, 2004. The decrease in cash from December 31, 2004 was primarily the result of operating cash outflows of \$6.7 million, investment activities of \$3.3 million plus a reduction of capital lease debt of \$0.8 million. These outflows were offset by funds from proceeds on disposal of property, plant and equipment of \$2.0 million and sale of common shares of \$5.9 million.

Investing activities used \$3.3 million of cash during the nine months ended September 30, 2005, compared to \$13.8 million in the same period 2004. Capital expenditures in the first nine months were \$4.7 million of which \$4.4 million were for the further development of the Black Fox project. In addition to this capital expenditure, \$1.6 million was invested in the restricted cash account as part of the Montana Tunnels reclamation liability.

We intend to deposit \$10.9 million of the \$14.0 million we expect to receive in the fourth quarter from the sale of the Nevada Assets as substitute collateral for our \$8.73 million convertible debentures, which are currently secured by the Nevada Assets. Subject to certain conditions, we could replace this future cash collateral with Black Fox as security for the convertible debentures. By the end of the second quarter of 2006, we expect we will be able to meet those conditions, resulting in additional funds being available to the Company for further development of Black Fox, exploration at Huizopa and other general corporate purposes.

We believe that our current funds together with the October 2005 \$2.5 million cash advance on the purchase price for the Nevada Assets, the remaining \$0.6 million we expect to receive for the sale of the Nevada Assets, net of cash used as cash collateral for the debentures, and the contemplated \$3.5 million private placement investment by Jipangu will be sufficient to fund our working capital and exploration and development expenditures for the next twelve months. In addition, we may raise additional financing from the sale of debt or equity securities which may include Canadian flow-through financing to fund a portion of our exploration expenditures at Black Fox. Exploration and development expenditures for Huizopa and Black Fox are estimated at \$1.0 million for the last quarter of 2005. If we do not sell the Nevada Assets or successfully generate cash flow from our mines, we would be required to secure additional financing to enable us to continue as a going concern and undertake our expenditure programs.

Financing activities for the nine months ended September 30, 2005 included (1) completing in January 2005 the second tranche of a registered offering of 4,199,998 units with an issue price of \$0.75 for proceeds of \$2.8 million, net of expenses of \$0.3 million and fair value of broker's compensation warrants of \$0.2 million, and (2) completing on June 3, 2005, the sale to Jipangu of 10,000,000 common shares at \$0.32 per share, proceeds from which amounted to \$3.2 million, net of expenses of \$32,000.

DIFFERENCES BETWEEN CANADIAN AND U.S. GENERALLY ACCEPTED ACCOUNTING PRINCIPLES (GAAP)

The Company reports under Canadian GAAP and reconciles to U.S. GAAP. The application of U.S. GAAP has a significant effect on the net loss and net loss per share. For a detailed explanation see Note 9 of our interim financial statements.

CRITICAL ACCOUNTING ESTIMATES AND POLICIES

The preparation of financial statements in conformity with generally accepted accounting principals requires management to make a variety of estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the financial statements as well as the reported amounts of revenues and expenses during the reporting periods covered by the financial statements.

On March 30, 2005, the Financial Accounting Standards Board ("FASB") ratified the consensus of the EITF Issue 04-6 that stripping costs incurred during the production phase of a mine are variable production costs that should be included in the costs of the inventory produced during the period that the stripping costs are incurred.

In the first quarter of 2005 and prior periods, Apollo deferred or accrued stripping costs incurred during production, as appropriate, and charged these costs to operations on the basis of the estimated average stripping ratio for Montana Tunnels. Commencing in the second quarter of 2005, Apollo changed its accounting policy under Canadian GAAP and U.S. GAAP with respect to stripping costs to be consistent with the consensus reached by the EITF, on the basis that the consensus results in a more reliable, relevant and consistent application of GAAP. This change has been applied retrospectively by restating prior periods. The effect of this change was to increase the deficit at January 1, 2004 by \$24,033,000 and to increase the net loss for the year ended December 31, 2004 by \$12,818,000 (\$0.16 per share). The net loss for the three months and nine months ended September 30, 2004 increased by \$4,097,000 (\$0.05 per share) and \$11,446,000 (\$0.15 per share), respectively, as a result of this change.

CONTRACTUAL OBLIGATIONS

The Company has several outstanding equipment leases and financings. As of September 30, 2005, there are no material changes from the information presented in the Company's Annual Report.

OFF BALANCE SHEET ARRANGEMENTS

We have a contingent liability at our Black Fox property in the form of a Cdn \$3.0 million payment to the original owners of the property due if and when the mine reaches an average production level of 300 tonnes of ore per day over a 30 day period.

ENVIRONMENTAL

As of September 30, 2005, we have accrued \$12.4 million related to reclamation, severance and other closure requirements at Montana Tunnels, an increase of \$0.6 million from December 31, 2004. This liability is covered by a combination of surety bonds, totaling \$15.8 million, and cash bonds totaling \$1.3 million, for a total reclamation

surety, at September 30, 2005 of \$17.1 million. We have accrued what management believes is the present value of our best estimate of the liability as of September 30, 2005; however, it is possible that our obligation may change in the near or long term depending on a number of factors.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Our exposure to market risk includes, but is not limited to, the following risks: changes in interest rates on our investment portfolio, changes in foreign currency exchange rates and commodity price fluctuations.

Interest Rate Risk

Other than a convertible debenture with a fixed coupon rate of 12% per annum, we have minimal debt and thus no material interest rate exposure related to debt. When appropriate we invest excess cash in short-term debt instruments of the United States and Canadian Governments and their agencies on a fixed interest rate basis. Over time the rates received on such investments may fluctuate with changes in economic conditions. As a result our investment income may fall short of expectations during periods of lower interest rates. We estimate that given the cash balances expected during 2005, a one percent change in interest rates would result in a \$100,000 change in interest income. We may in the future actively manage our exposure to interest rate risk.

Foreign Currency Exchange Rate Risk

The price of gold is denominated in United States dollars and the majority of our revenues and expenses are denominated in United States dollars. To the extent there are fluctuations in local currency exchange rates against the dollar, the devaluation of a local currency is generally economically neutral or beneficial to the operation because local salaries and supplies will decrease against the U.S. dollar revenue stream. Approximately 52% of our cash and cash equivalents were invested in Canadian dollars at September 30, 2005. We have realized exchange losses during 2005 due to a decrease in the value of the Canadian dollar versus the U.S. dollar. We currently do not utilize market risk sensitive instruments to manage our exposure.

Commodity Price Risk

We are engaged in gold mining and related activities, including exploration, extraction, processing and reclamation. Gold is our primary product and, as a result, changes in the price of gold could significantly affect our results of operations and cash flows. According to current estimates, a \$10 change in the price of gold would result in a \$0.3 million change in pre-tax earnings and cash flows from continuing operations for the last quarter of 2005. We have in the past purchased puts/calls and we have no ounces of puts/calls outstanding at September 30, 2005. We may in the future more actively manage our exposure through hedging programs.

ITEM 4. CONTROLS AND PROCEDURES

Disclosure Controls and Procedures

Apollo maintains disclosure controls and procedures that are designed to ensure that information required to be disclosed in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms, and that such information is accumulated and communicated to Apollo's management, including its Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required financial disclosure.

As of the end of the period covered by this report, we carried out an evaluation, under the supervision of our management, including the Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures pursuant to Exchange Act Rule 13a-15(b) under the Exchange Act. Based upon, and as of the date of this evaluation, the Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were not effective, because of the material weaknesses discussed below. In light of the material weaknesses described below, we performed additional analysis and other post-closing procedures to ensure our consolidated financial statements are prepared in accordance with generally accepted accounting principles. Accordingly, management believes that the financial statements included in this report fairly present in all material respects our financial condition, results of operations and cash flows for the periods presented.

We identified material weaknesses for the year ended December 31, 2004 in two areas. A material weakness is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. First, we have deficient inventory control and management processes and lack of segregation of procurement and accounting duties at our Florida Canyon Mine, primarily due to a lack of sufficient personnel at the Florida Canyon Mine. Second, we lack appropriate review of non-routine or complex accounting matters, related accounting entries, and appropriate documentation, disclosure and application of Canadian and U.S. GAAP, primarily due to a lack of sufficient personnel with a level of technical accounting expertise commensurate with our reporting requirements.

Not all of these deficiencies have been fully remediated. The first of these deficiencies relates primarily to staffing at our Nevada Assets, assets held for sale. As of the end of September 2005 we have implemented new inventory procedures and have added staff to our warehouse. As a result of these measures we believe the deficiencies with regard to the inventory control have been remediated. Additional steps have been taken to improve the effectiveness of the internal controls with regard to the management processes and a lack of segregation of procurement and accounting duties at our Nevada Assets. However, our internal audit team has not fully monitored and tested these controls because the assets are under contract for sale. Therefore, the Company believes these significant deficiencies in aggregate remain significant enough to be reported as a "material weakness" in our financial controls as defined in AS No. 2. We will continue to monitor the effectiveness of our internal controls and make further changes our management determines appropriate.

The second material weakness relates to lack of appropriate review of non-routine or complex accounting matters, relating accounting entries, and appropriate documentation, disclosure and application of Canadian and U.S. GAAP, primarily due to a lack of sufficient personnel with a level of technical accounting expertise commensurate with our reporting requirements. In the second quarter, we established a Financial Disclosure Policy Committee to review all non-routine accounting matters and disclosure and application of Canadian and U.S. GAAP, added additional technical accounting expertise to the accounting staff, and implemented formal policies addressing the internal controls over non-routine or complex accounting matters, accounting entries, appropriate documentation, and disclosures. During the third quarter, we began our evaluation of these controls and procedures and in the fourth quarter we will continue our evaluation to determine if these controls are operating effectively.

We intend to continue to monitor our internal controls, and if further improvements or enhancements are identified, we will take steps to implement such improvements or enhancements. Except for the steps described above, there have been no other changes in our internal control over financial reporting, which have materially affected, or are reasonably likely to materially affect, such internal controls.
