press release			
May 29, 2010, 1715 CDT			
<u>UPDA</u>	ATE ON GULF OF M	<u> 1EXICO</u>	O OIL SPILL
BP started the "top kill" operations to sto May 26, 2010.	op the flow of oil from	the MC	C252 well in the Gulf of Mexico at 1300 CDT on
The procedure was intended to stem th fluids through the blow-out preventer on	_		mately kill the well by injecting heavy drilling ll.
		-	mud, in three attempts at rates of up to 80 barrels t, the operation did not overcome the flow from
The Government, together with BP, had deployment of the Lower Marine Riser I			e to the next step in the subsea operations, the ment System.
The operational plan first involves outfi	ng and than ramaving	r tha dar	negad risar from the top of the failed Play Out

The operational plan first involves cutting and then removing the damaged riser from the top of the failed Blow-Out Preventer (BOP) to leave a cleanly-cut pipe at the top of the BOP's LMRP. The cap is designed to be connected to a riser from the Discoverer Enterprise drillship and placed over the LMRP with the intention of capturing most of the oil and gas flowing from the well. The LMRP cap is already on site and it is currently anticipated that it will be connected in about four days.

Edgar Filing: BP PLC - Form 6-K

This operation has not been previously	carried out in 3	5,000 feet of	water and th	e successful	deployment of	of the
containment system cannot be assured.						

Drilling of the first relief well continues and is currently at 12,090 feet. Drilling of the second relief well is temporarily suspended and is expected to recommence shortly from 8,576 feet.
