NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

June 30, 2013

(unaudited)

Note 1 Organization and basis of presentation:

Organization We are a majority-owned subsidiary of Valhi, Inc. (NYSE: VHI). At June 30, 2013, Valhi held approximately 50% of our outstanding common stock and NL Industries, Inc. (NYSE: NL) held an additional 30% of our common stock. Valhi owns approximately 83% of NL's outstanding common stock. Approximately 93% of Valhi's outstanding common stock is held by Contran Corporation and its subsidiaries. Substantially all of Contran's outstanding voting stock is held by trusts established for the benefit of certain children and grandchildren of Harold C. Simmons (for which Mr. Simmons is the sole trustee), or is held directly by Mr. Simmons or other persons or entities related to Mr. Simmons. Consequently, Mr. Simmons may be deemed to control Contran, Valhi and us.

Basis of presentation The unaudited Condensed Consolidated Financial Statements contained in this Quarterly Report have been prepared on the same basis as the audited Consolidated Financial Statements in our Annual Report on Form 10-K for the year ended December 31, 2012 that we filed with the Securities and Exchange Commission (SEC) on March 12, 2013 (2012 Annual Report). In our opinion, we have made all necessary adjustments (which include only normal recurring adjustments) in order to state fairly, in all material respects, our consolidated financial position, results of operations and cash flows as of the dates and for the periods presented. We have condensed the Consolidated Balance Sheet and Statement of Stockholders' Equity at December 31, 2012 contained in this Quarterly Report as compared to our audited Consolidated Financial Statements at that date, and we have omitted certain information and footnote disclosures (including those related to the Consolidated Balance Sheet at December 31, 2012) normally included in financial statements prepared in accordance with accounting principles generally accepted in the United States of America (GAAP). Our results of operations for the interim periods ended June 30, 2013 may not be indicative of our operating results for the full year. The Condensed Consolidated Financial Statements contained in this Quarterly Report should be read in conjunction with our 2012 Consolidated Financial Statements contained in our 2012 Annual Report.

Unless otherwise indicated, references in this report to we, us or our refer to Kronos Worldwide, Inc. and its subsidiaries (NYSE: KRO) taken as a whole.

Table of Contents**Note 2 Accounts and other receivables:**

	December 31, 2012	June 30, 2013

Finished products	394.8	264.6
Supplies	64.7	65.7
Total	\$ 638.3	\$ 449.8

Note 4 Marketable securities:

Our marketable securities consist of investments in the publicly-traded shares of related parties: Valhi, NL and CompX International Inc. NL owns a majority of CompX's outstanding common stock. All of our marketable securities are accounted for as available-for-sale securities, which are carried at fair value using quoted market prices in active markets for each marketable security, and represent a Level 1 input within the fair value hierarchy. See Note 13. Because we have classified all of our marketable securities as available-for-sale, any unrealized gains or losses on the securities are recognized through other comprehensive income, net of deferred income taxes.

Marketable security	Fair value measurement level	Market value (In millions)	Cost basis	Unrealized gains
As of December 31, 2012:

Total		\$ 23.8	\$ 15.4	\$ 8.4

- 11 -

Table of Contents

At December 31, 2012 and June 30, 2013, we held approximately 1.7 million shares of Valhi's common stock with a quoted per share market price of \$12.50 and \$13.74, respectively. We also held a nominal number of shares of CompX and NL common stocks.

The Valhi, CompX and NL common stocks we own are subject to the restrictions on resale pursuant to certain provisions of SEC Rule 144. In addition, as a majority-owned subsidiary of Valhi we cannot vote our shares of Valhi common stock under Delaware Corporation Law, but we do receive dividends from Valhi on these shares, when declared and paid.

Table of Contents**Note 7 Long-term debt:**

	December 31, 2012	June 30, 2013
	(In millions)	
Term loan	\$ 384.5	\$ 98.6
Note payable to Contran		180.0
Revolving European credit facility	13.2	26.1
Other	2.4	3.1
 Total debt	 400.1	 307.8
Less current maturities	21.2	20.9
 Total long-term debt	 \$ 378.9	 \$ 286.9

Term loan In February 2013, we voluntarily prepaid an aggregate \$290 million principal amount of our term loan. We recognized a non-cash pre-tax interest charge of \$6.6 million in the first quarter of 2013 related to this prepayment consisting of the write-off of the unamortized original issue discount costs and deferred financing costs associated with such prepayment. Funds for such prepayment were provided by \$100 million of our cash on hand as well as borrowings of \$190 million under a new loan from Contran as described below. As a result of this prepayment, the remaining \$100 million principal amount of the term loan is not repayable until final maturity of the term loan in June 2018. The average interest rate on the term loan as of and for the six months ended June 30, 2013 was 7% and 6.8%, respectively. The carrying amount of the term loan includes unamortized original issue discount of \$1.4 million at June 30, 2013. In July 2013, we voluntarily prepaid the remaining \$100 million principal amount outstanding under our term loan, using \$50 million of our cash on hand as well as borrowings of \$50 million under our revolving North American credit facility.

Note payable to Contran As discussed above, in February 2013 we entered into a promissory note with Contran that allows us to borrow up to \$290 million. This new loan from Contran contains terms and conditions similar to the terms and conditions of the term loan, except that the loan from Contran is unsecured and contains no financial maintenance covenant. The independent members of our board of directors approved the terms and conditions of the loan from Contran. The note requires quarterly principal payments of \$5.0 million which commenced in March 2013, with any remaining outstanding principal due by June 2018. Voluntary principal prepayments are permitted at any time without penalty. The note bears interest at LIBOR (with LIBOR no less than 1%) plus 5.125%, or the base rate (as defined in the agreement) plus 4.125%. We are required to use the base rate method until such time as both (1) the term loan discussed above has been fully repaid and (2) the European credit facility has been amended on terms satisfactory to Contran, at which time we would have the option to use either the base rate or LIBOR rate methods. The average interest rate on these borrowings as of and for the period from issuance to June 30, 2013 was 7.375%.

Table of Contents

Revolving European credit facility - During the first six months of 2013, we borrowed 10 million (\$12.8 million when borrowed) and made no repayments under our European credit facility. The average interest rate on these borrowings as of and for the six months ended June 30, 2013 was 2.03% and 2.02%, respectively. At June 30, 2013, the equivalent of \$130.5 million was available for borrowing under this facility.

Revolving North American credit facility We had no borrowings or repayments under our North American credit facility for the six months ended June 30, 2013. At June 30, 2013 we had no outstanding borrowings under this revolving facility and approximately \$119.5 million was available for borrowing.

Canada At June 30, 2013, an aggregate of Cdn. \$7.5 million letters of credit were outstanding under our Canadian subsidiary's loan agreement with the Bank of Montreal which exists solely for the issuance of up to Cdn. \$10.0 million in letters of credit.

In January 2013, we borrowed Cdn. \$1.8 million (USD \$1.8 million) under our Canadian subsidiary's agreement with an economic development agency of the Province of Quebec, Canada which was recorded net of Cdn. \$.5 million (USD \$.5 million) imputed interest.

Restrictions and other Our European credit facility described above requires the borrower to maintain minimum levels of equity, requires the maintenance of certain financial ratios, limits dividends and additional indebtedness and contains other provisions and restrictive covenants customary in lending transactions of this type. Our term loan, North American revolving credit facility and note payable to Contran also contain restrictive covenants. At June 30, 2013, there were no restrictions on our ability to pay dividends.

We are in compliance with all of our debt covenants at June 30, 2013.

Tax authorities are examining certain of our U.S. and non-U.S. tax returns and have or may propose tax deficiencies, including penalties and interest. Because of the inherent uncertainties involved in settlement initiatives and court and tax proceedings, we cannot guarantee that these matters will be resolved in our favor, and therefore our potential exposure, if any, is also uncertain. In 2011 and 2012, we received notices of re-assessment from the Canadian federal and provincial tax authorities related to the years 2002 through 2004. We object to the re-assessments and believe the position is without merit. Accordingly, we are appealing the re-assessments and in connection with such appeal we were required to post letters of credit aggregating Cdn. \$7.5 million (see Note 7). If the full amount of the proposed adjustment were ultimately to be assessed against us, the cash tax liability would be approximately \$15.6 million. We believe we have adequate accruals for additional taxes and related interest expense which could ultimately result from tax examinations. We believe the ultimate disposition of tax examinations should not have a material adverse effect on our consolidated financial position, results of operations or liquidity. We currently estimate that our unrecognized tax benefits may change by \$3 million during the next twelve months related to certain adjustments to our prior year returns.

Balance at end of period	\$ (222.8)	\$ (212.6)	\$ (222.8)	\$ (212.6)

See Note 9 for amounts related to our defined benefit pension plans and OPEB plans.

Table of Contents**Note 12 Commitments and contingencies:**

From time-to-time, we are involved in various environmental, contractual, product liability, patent (or intellectual property), employment and other claims and disputes incidental to our operations. In certain cases, we have insurance coverage for these items. We currently believe the disposition of all claims and disputes, individually or in the aggregate, should not have a material adverse effect on our consolidated financial position, results of operations or liquidity beyond the accruals we have already provided.

Please refer to our 2012 Annual Report for a discussion of certain other legal proceedings to which we are a party.

Note 13 Financial instruments:

The following table summarizes the valuation of our financial instruments recorded on a fair value basis as of December 31, 2012 and June 30, 2013:

	Total	Fair Value Measurements		
		Quoted Prices in Active Markets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
		(In millions)		
		Asset (liability)		
		December 31, 2012		
Currency forward contracts	\$ 1.8	\$ 1.8	\$	\$
Noncurrent marketable securities (See Note 4)	21.6	21.6		
June 30, 2013				
Currency forward contracts	\$ (2.0)	\$ (2.0)	\$	\$
Noncurrent marketable securities (See Note 4)	23.8	23.8		

Certain of our sales generated by our non-U.S. operations are denominated in U.S. dollars. We periodically use currency forward contracts to manage a very nominal portion of currency exchange rate risk associated with trade receivables denominated in a currency other than the holder's functional currency or similar exchange rate risk associated with future sales. We have not entered into these contracts for trading or speculative purposes in the past, nor do we currently anticipate entering into such contracts for trading or speculative purposes in the future. Derivatives used to hedge forecasted transactions and specific cash flows associated with financial assets and liabilities denominated in currencies other than the U.S. dollar and which meet the criteria for hedge accounting are designated as cash flow hedges. Consequently, the effective portion of gains and losses is deferred as a component of accumulated other comprehensive income and is recognized in earnings at the time the hedged item affects earnings. Contracts that do not meet the criteria for hedge accounting are marked-to-market at each balance sheet date with any resulting gain or loss recognized in income currently as part of net currency transactions. The fair value of the currency forward contracts is determined using Level 1 inputs based on the currency spot forward rates quoted by banks or currency dealers.

Table of Contents

At June 30, 2013, we had currency forward contracts to exchange:

an aggregate of \$54.0 million for an equivalent value of Canadian dollars at an exchange rate ranging from Cdn. \$1.02 to Cdn. \$1.06 per U.S. dollar. These contracts with Wells Fargo Bank, N.A. mature from July 2013 through December 2014 at a rate of \$3.0 million per month, subject to early redemption provisions at our option;

an aggregate \$35.0 million for an equivalent value of Norwegian kroner at exchange rates ranging from kroner 5.84 to kroner 6.14 per U.S. dollar. These contracts with DnB Nor Bank ASA mature at a rate of \$5.0 million per month in certain months from August 2013 through April 2014; and

an aggregate 22.0 million for an equivalent value of Norwegian kroner at exchange rates ranging from kroner 7.50 to kroner 8.07 per euro. These contracts with DnB Nor Bank ASA mature at a rate ranging from 2.0 million to 5.0 million per month in certain months from July 2013 through April 2014.

The estimated fair value of our currency forward contracts at June 30, 2013 was a net loss of \$2.0 million, of which \$.3 million is recognized as part of accounts and other receivables and \$2.3 million is recognized as part of accounts payable and accrued liabilities. There is also a corresponding \$2.0 million currency transaction loss recognized in our Condensed Consolidated Statement of Operations. We are not currently using hedge accounting for our outstanding currency forward contracts at June 30, 2013, and we did not use hedge accounting for any of such contracts we previously held in 2012.

The following table presents the financial instruments that are not carried at fair value but which require fair value disclosure as of December 31, 2012 and June 30, 2013.

	December 31, 2012		June 30, 2013	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
	(In millions)			
Cash, cash equivalents and restricted cash	\$ 292.9	\$ 292.9	\$ 111.3	\$ 111.3
Notes payable and long-term debt:				
Variable rate:				
Term loan	384.5	396.8	98.6	100.4
Note payable to Contran			180.0	180.0
European credit facility	13.2	13.2	26.1	26.1
Common stockholders' equity	1,062.1	2,260.2	936.9	1,882.4

Table of Contents

At December 31, 2012 and June 30, 2013, the estimated market price of our term loan was \$1,017.5 per \$1,000 principal amount and \$1,004.4 per \$1,000 principal amount, respectively. The fair value of our term loan is based on quoted market prices; however, these quoted market prices represent Level 2 inputs because the markets in which the term loan trades were not active. The fair values of our note payable to Contran and our European credit facility represent Level 2 inputs, and are deemed to approximate book value. The fair value of our common stockholders equity is based upon quoted market prices at each balance sheet date, which represent Level 1 inputs. Due to their near-term maturities, the carrying amounts of accounts receivable and accounts payable are considered equivalent to fair value.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

RESULTS OF OPERATIONS:

Business overview

We are a leading global producer and marketer of value-added titanium dioxide pigments (TiO₂). TiO₂ is used for a variety of manufacturing applications, including coatings, plastics, paper and other industrial and specialty products. For the six months ended June 30, 2013, approximately one-half of our sales volumes were into European markets. Our production facilities are located in Europe and North America.

We consider TiO₂ to be a "quality of life" product, with demand affected by gross domestic product, or GDP, and overall economic conditions in our markets located in various regions of the world. Over the long-term, we expect demand for TiO₂ will grow by 2% to 3% per year, consistent with our expectations for the long-term growth in GDP. However, even if we and our competitors maintain consistent shares of the worldwide market, demand for TiO₂ in any interim or annual period may not change in the same proportion as the change in GDP, in part due to relative changes in the TiO₂ inventory levels of our customers. We believe that our customers' inventory levels are influenced in part by their expectations for future changes in TiO₂ market selling prices as well as their expectations for future availability of product. Although certain of our TiO₂ grades are considered specialty pigments, the majority of our grades and substantially all of our production are considered commodity pigment products, with price and availability being the most significant competitive factors along with quality and customer service.

The factors having the most impact on our reported operating results are:

our TiO₂ sales and production volumes,

TiO₂ selling prices,

currency exchange rates (particularly the exchange rate for the U.S. dollar relative to the euro, Norwegian krone and the Canadian dollar) and

manufacturing costs, particularly raw materials, maintenance and energy-related expenses.

Our key performance indicators are our TiO₂ average selling prices and our TiO₂ sales and production volumes. TiO₂ selling prices generally follow industry trends and prices will increase or decrease generally as a result of competitive market pressures.

Table of Contents

Executive summary

We reported a net loss of \$33.9 million, or \$.29 per share, in the second quarter of 2013 as compared to net income of \$64.5 million, or \$.56 per share, in the second quarter of 2012. For the first six months of 2013, we reported a net loss of \$75.0 million, or \$.65 per share, compared to net income of \$201.4 million, or \$1.74 per share, in the first six months of 2012. We had a net loss in the second quarter of 2013 compared to net income in the second quarter of 2012 principally due to a loss from operations resulting from the unfavorable effects of lower average selling prices and higher raw material costs in 2013. We had a net loss in the first half of 2013 compared to net income in the first half of 2012 principally due to a loss from operations resulting from the unfavorable effects of lower average selling prices, lower production volumes and higher raw material costs in 2013.

Our results in the first six months of 2013 include a first quarter non-cash pre-tax charge of \$6.6 million (\$4.3 million, or \$.04 per share, net of income tax benefit) related to the voluntary prepayment of \$290 million principal amount of our term loan, consisting of the write-off of original issue discount costs and deferred financing costs associated with such prepayment. Our results in the first six months of 2012 include an aggregate second quarter charge of \$7.2 million (\$4.7 million, or \$.04 per share, net of income tax benefit) associated with the June 2012 redemption of the remaining 279.2 million principal amount of our Senior Notes, consisting of the call premium paid, interest from the June 14, 2012 indenture discharge date to the July 20, 2012 redemption date and the write-off of unamortized deferred financing costs and original issue discount.

Forward-looking information

This report contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, as amended. Statements in this Quarterly Report on Form 10-Q that are not historical facts are forward-looking in nature and represent management's beliefs and assumptions based on currently available information. Statements in this report including, but not limited to, statements found in Item 2 -

Management's Discussion and Analysis of Financial Condition and Results of Operations, are forward-looking statements that represent our management's beliefs and assumptions based on currently available information. In some cases you can identify forward-looking statements by the use of words such as believes, intends, may, should, could, anticipates, expects or comparable terminology, or by discussions of trends. Although we believe the expectations reflected in forward-looking statements are reasonable, we do not know if these expectations will be correct. Such statements by their nature involve substantial risks and uncertainties that could significantly impact expected results. Actual future results could differ materially from those predicted. The factors that could cause our actual future results to differ materially from those described herein are the risks and uncertainties discussed in this Quarterly Report and those described from time to time in our other filings with the SEC including, but are not limited to, the following:

Future supply and demand for our products

The extent of the dependence of certain of our businesses on certain market sectors

The cyclical nature of our business

Customer and producer inventory levels

Unexpected or earlier-than-expected industry capacity expansion

Table of Contents

Changes in raw material and other operating costs (such as ore and energy costs)

Changes in the availability of raw materials (such as ore)

General global economic and political conditions (such as changes in the level of gross domestic product in various regions of the world and the impact of such changes on demand for TiO₂)

Competitive products and substitute products

Customer and competitor strategies

Potential consolidation of our competitors

Potential consolidation of our customers

The impact of pricing and production decisions

Competitive technology positions

The introduction of trade barriers

Possible disruption of our business, or increases in our cost of doing business, resulting from terrorist activities or global conflicts

Fluctuations in currency exchange rates (such as changes in the exchange rate between the U.S. dollar and each of the euro, the Norwegian krone and the Canadian dollar), or possible disruptions to our business resulting from potential instability resulting from uncertainties associated with the euro

Operating interruptions (including, but not limited to, labor disputes, leaks, natural disasters, fires, explosions, unscheduled or unplanned downtime, transportation interruptions and cyber attacks)

Our ability to renew or refinance credit facilities

Our ability to maintain sufficient liquidity

The ultimate outcome of income tax audits, tax settlement initiatives or other tax matters

Edgar Filing: KRONOS WORLDWIDE INC - Form 10-Q

Our ability to utilize income tax attributes, the benefits of which have been recognized under the more-likely-than-not recognition criteria

Environmental matters (such as those requiring compliance with emission and discharge standards for existing and new facilities)

Government laws and regulations and possible changes therein

The ultimate resolution of pending litigation

Possible future litigation.

Should one or more of these risks materialize (or the consequences of such a development worsen), or should the underlying assumptions prove incorrect, actual results could differ materially from those forecasted or expected. We disclaim any intention or obligation to update or revise any forward-looking statement whether as a result of changes in information, future events or otherwise.

* Thousands of metric tons

Current industry conditions - In May 2013, we announced price increases for our TiO₂ products in all of our markets, implementation of which began in June 2013. As a result, after about a year of decreasing selling prices within the TiO₂ industry, our selling prices have generally stabilized, with increases in some accounts. Our average selling prices at the end of the second quarter of 2013 were 1% lower than at the end of the first quarter of 2013, and were 8% lower than at the end of 2012. Demand for TiO₂ products has increased in the second quarter, primarily in European and export markets, as customers have generally depleted their inventories during the second half of 2012 and the first quarter of 2013 in response to general global economic uncertainty.

While we operated our production facilities at full practical capacity rates in the first quarter of 2012, we operated our facilities at reduced rates during the remainder of 2012 (approximately 86% of practical capacity in the second quarter, approximately 71% in the third quarter and approximately 80% in the fourth quarter) to align production levels and inventories to current and anticipated near-term customer demand levels. We continued to operate our production facilities at reduced capacity rates in the first half of 2013 (approximately 92% of practical capacity in the first quarter and approximately 90% in the second quarter).

Table of Contents

We experienced significantly higher costs for our raw materials such as third party feedstock ore and petroleum coke in 2012. We operate two ilmenite mines in Norway, the production from which provides all of the feedstock for our European sulfate process facilities as well as third party ilmenite ore sales. Overall, the cost per metric ton of TiO_2 we produced during 2012 was approximately 50% higher as compared to 2011, primarily due to the higher feedstock ore costs procured from third parties and unabsorbed fixed production costs resulting from reduced production volumes. However, as a substantial portion of the TiO_2 products we sold in the first half of 2012 was produced with lower-cost feedstock ore purchased in 2011, our cost of sales per metric ton in the first quarter of 2012 (and to a lesser extent the second quarter of 2012) was significantly lower as compared to the cost per metric ton for products we sold in the third and fourth quarters of 2012. We have seen some moderation in the cost of TiO_2 feedstock ore procured from third parties in 2013, but such reductions will not be fully reflected in our cost of sales until the second half of 2013. Consequently, our cost of sales per metric ton of TiO_2 sold in the first half of 2013 (particularly in the first quarter) was significantly higher than what we expect our cost of sales per metric ton of TiO_2 to be in the remainder of 2013, as a substantial portion of the TiO_2 products we sold in the first quarter (and to a lesser extent the second quarter) of 2013 was produced with the higher-cost feedstock ore procured in 2012.

Net sales - Net sales in the second quarter of 2013 decreased 12%, or \$64.2 million, compared to the second quarter of 2012 primarily due to the net effects of a 24% decrease in average TiO_2 selling prices (which decreased net sales by approximately \$131 million) and a 17% increase in sales volumes (which increased net sales by approximately \$93 million). TiO_2 selling prices will increase or decrease generally as a result of competitive market pressures, changes in the relative level of supply and demand as well as changes in raw material and other manufacturing costs.

Our sales volumes increased 17% in the second quarter of 2013 as compared to the second quarter of 2012 due to higher customer demand, primarily in European and certain export markets. In addition, we estimate the unfavorable effect of changes in currency exchange rates decreased our net sales by approximately \$3 million as compared to the second quarter of 2012.

Cost of sales - Cost of sales increased \$89.5 million or 23% in the second quarter of 2013 compared to 2012 due to the net impact of higher raw material costs of approximately \$26 million (primarily feedstock ore), a 17% increase in sales volumes, a 5% increase in TiO_2 production volumes and currency fluctuations (primarily the euro). Our cost of sales per metric ton of TiO_2 sold in the second quarter of 2013 was somewhat higher than TiO_2 sold in the second quarter of 2012, as a portion of the TiO_2 products we sold in the second quarter of 2012 was produced with lower-cost feedstock ore purchased in 2011, while a portion of the TiO_2 products we sold in the second quarter of 2013 was produced with higher-cost feedstock ore purchased in 2012. Overall and as discussed above, the cost per metric ton of TiO_2 we produced during 2012 was approximately 50% higher as compared to 2011, primarily due to the higher feedstock ore costs and unabsorbed fixed production costs resulting from reduced production volumes. Cost of sales as a percentage of net sales increased to 98% in the second quarter of 2013 compared to 70% in the same period of 2012 primarily due to the effects of lower average selling prices and higher raw materials costs, as discussed and quantified above.

Table of Contents

Unionized employees in our Canadian TiO₂ production facility are covered by a collective bargaining agreement that expired June 15, 2013. The Canadian facility represents approximately 19% of our worldwide TiO₂ production capacity. The union employees represented by the Confederation des Syndicat National (CSN) rejected our revised global offer, and we declared a lockout of unionized employees upon the expiration of the existing contract. As of the date of this report, no agreement has been reached with the CSN and the unionized employees remain locked out. We are currently operating our Canadian plant at approximately 15% of the plant's capacity with non-union management employees, and have implemented a strategy to reduce the financial impact of operating the plant during the lockout. We currently expect minimal interruptions in meeting customer demand, as orders are being filled with inventory on hand or through production from our other facilities. There is no assurance that we will be able to reach an agreement with the CSN on the terms of a new collective bargaining agreement, or reach an agreement on terms that will not have a material adverse effect on our results of operations.

Gross margin and income (loss) from operations - Income (loss) from operations decreased by \$158.3 million from income of \$110.6 million in the second quarter of 2012 to a loss of \$47.7 million in the second quarter of 2013. Income (loss) from operations as a percentage of net sales decreased to (10)% in the second quarter of 2013 from 20% in the same period of 2012. This decrease was driven by the decline in gross margin, which decreased to 2% for the second quarter of 2013 compared to 30% for the second quarter of 2012. As discussed and quantified above, our gross margin has decreased primarily due to the net effects of lower selling prices, higher manufacturing costs (primarily raw materials), higher sales volumes and higher production volumes. Additionally, changes in currency exchange rates have negatively affected our gross margin and income from operations. We estimate that changes in currency exchange rates decreased income from operations by approximately \$2 million in the second quarter of 2013 as compared to the same period in 2012.

Other non-operating income (expense) - In June 2012, we entered into a new \$400 million term loan. We used a portion of the net proceeds of the term loan to redeem the remaining outstanding 6.5% Senior Secured Notes due April 2013 (\$279.2 million principal amount outstanding). As a result, we recognized an aggregate \$7.2 million pre-tax charge in the second quarter of 2012 related to the early extinguishment of debt, consisting of the call premium paid, interest from the June 14, 2012 indenture discharge date to the July 20, 2012 redemption date and the write-off of unamortized deferred financing costs and original issue discount associated with the redeemed Senior Secured Notes.

Interest expense decreased \$1.0 million from \$6.7 million in the second quarter of 2012 to \$5.7 million in the second quarter of 2013 primarily due to lower average debt levels in 2013.

Interest and dividend income decreased \$1.7 million to \$.3 million in the second quarter of 2013 primarily due to lower balances available for investment, principally related to our loan to Valhi which was completely repaid in December 2012. Interest income on our loan to Valhi was \$1.7 million in the second quarter of 2012.

Income tax provision (benefit) - We recognized an income tax benefit of \$19.2 million in the second quarter of 2013 compared to an income tax provision of \$34.2 million in the same period last year. This difference is primarily due to our decreased earnings. See Note 8 to our Condensed Consolidated Financial Statements.

Table of Contents

We have substantial net operating loss carryforwards in Germany (the equivalent of \$744 million and \$100 million for German corporate and trade tax purposes, respectively, at December 31, 2012). At June 30, 2013, we have concluded that no deferred income tax asset valuation allowance is required to be recognized with respect to such carryforwards, principally because (i) such carryforwards have an indefinite carryforward period, (ii) we have utilized a portion of such carryforwards during the most recent three-year period and (iii) we currently expect to utilize the remainder of such carryforwards over the long term. However, prior to the complete utilization of such carryforwards, particularly if we were to generate losses in our German operations for an extended period of time, it is possible that we might conclude the benefit of such carryforwards would no longer meet the more-likely-than-not recognition criteria, at which point we would be required to recognize a valuation allowance against some or all of the then-remaining tax benefit associated with the carryforwards.

Six months ended June 30, 2013 compared to the six months ended June 30, 2012

	Six months ended June 30,			
	2012		2013	
	(Dollars in millions)			
Net sales	\$ 1,106.6	100%	\$ 944.7	100%

Percentage change in net sales:				
TiO ₂ product pricing				(22)%
TiO ₂ sales volumes				9
TiO ₂ product mix				(2)
Changes in currency exchange rates				
Total				(15)%

* Thousands of metric tons

Net sales - Net sales in the six months ended June 30, 2013 decreased 15%, or \$161.9 million, compared to the six months ended June 30, 2012 primarily due to the net effects of a 22% decrease in average TiO₂ selling prices (which decreased net sales by approximately \$243 million) and a 9% increase in sales volumes (which increased net sales by approximately \$100 million). TiO₂ selling prices will increase or decrease generally as a result of competitive market pressures, changes in the relative level of supply and demand as well as changes in raw material and other manufacturing costs.

Table of Contents

Our sales volumes increased 9% in the first six months of 2013 as compared to the first six months of 2012 due to increased customer demand, primarily in European and certain export markets partially offset by decreased demand in North American markets. Our sales volumes in the first six months of 2013 were a new record for a first-half year for us. We estimate the unfavorable effect of changes in currency exchange rates decreased our net sales by approximately \$2 million as compared to the first six months of 2012.

Cost of sales - Cost of sales increased \$249.4 million or 37% in the six months ended June 30, 2013 compared to this same period in 2012 due to the net impact of higher raw material costs of approximately \$136 million (primarily feedstock ore), a 9% increase in sales volumes, a 5% decrease in TiO₂ production volumes and currency fluctuations (primarily the euro). Our cost of sales per metric ton of TiO₂ sold in the first half of 2013 was significantly higher than TiO₂ sold in the first half of 2012, as a substantial portion of the TiO₂ products we sold in the first quarter of 2012 (and a portion of the TiO₂ products we sold in the second quarter of 2012) was produced with lower-cost feedstock ore purchased in 2011, while a substantial portion of the TiO₂ products we sold in the first quarter of 2013 (and a portion of the TiO₂ products we sold in the second quarter of 2013) was produced with higher-cost feedstock ore purchased in 2012. Overall, and as discussed above, the cost per metric ton of TiO₂ we produced during 2012 was approximately 50% higher as compared to 2011, primarily due to the higher feedstock ore costs and unabsorbed fixed production costs resulting from reduced production volumes. Cost of sales as a percentage of net sales increased to 99% in the first six months of 2013 compared to 62% in the same period of 2012 primarily due to the effects of higher raw materials costs as discussed above and a 5% decrease in TiO₂ production volumes.

Gross margin and income (loss) from operations - Income (loss) from operations decreased by \$414.6 million from income of \$320.0 million in the first six months of 2012 to a loss of \$94.6 million in the first six months of 2013. Income (loss) from operations as a percentage of net sales decreased to (10)% in the first six months of 2013 from 29% in the same period of 2012. This decrease was driven by the decline in gross margin, which decreased to 1% for the first six months of 2013 compared to 38% for the same period in 2012. As discussed and quantified above, our gross margin has decreased primarily due to the net effects of lower selling prices, higher manufacturing costs (primarily raw materials), higher sales volumes and lower production volumes. Additionally, changes in currency exchange rates have negatively affected our gross margin and income from operations. We estimate that changes in currency exchange rates decreased income from operations by approximately \$8 million in the first six months of 2013 as compared to the same period in 2012.

Other non-operating expense - We recognized an aggregate \$6.6 million pre-tax charge, consisting of the write-off of unamortized original issue discount costs and deferred financing costs, in the first quarter of 2013 related to the voluntary prepayment of \$290 million of our term loan. See Note 7 to our Condensed Consolidated Financial Statements.

As discussed above, we recognized an aggregate \$7.2 million pre-tax charge in the second quarter of 2012 related to the early extinguishment of our remaining Senior Secured Notes.

Table of Contents

Interest expense decreased \$.9 million from \$13.0 million in the six months ended June 30, 2012 to \$12.1 million in the six months ended June 30, 2013 primarily due to lower average debt levels in 2013.

Interest and dividend income decreased \$3.7 million to \$.6 million in the six months ended June 30, 2013 primarily due to lower balances available for investment, principally related to our loan to Valhi which was completely repaid in December 2012. Interest income on our loan to Valhi was \$3.4 million in the six months ended June 30, 2012.

Income tax provision (benefit) - We recognized an income tax benefit of \$37.7 million in the first six months of 2013 compared to an income tax provision of \$102.7 million in the same period last year. This difference is primarily due to our decreased earnings. See Note 8 to our Condensed Consolidated Financial Statements for a tabular reconciliation of our statutory income tax provision to our actual tax provision.

Effects of Currency Exchange Rates

We have substantial operations and assets located outside the United States (primarily in Germany, Belgium, Norway and Canada). The majority of our sales from non-U.S. operations are denominated in currencies other than the U.S. dollar, principally the euro, other major European currencies and the Canadian dollar. A portion of our sales generated from our non-U.S. operations is denominated in the U.S. dollar. Certain raw materials used worldwide, primarily titanium-containing feedstocks, are purchased in U.S. dollars, while labor and other production costs are purchased primarily in local currencies. Consequently, the translated U.S. dollar value of our non-U.S. sales and operating results are subject to currency exchange rate fluctuations which may favorably or unfavorably impact reported earnings and may affect the comparability of period-to-period operating results. In addition to the impact of the translation of sales and expenses over time, our non-U.S. operations also generate currency transaction gains and losses which primarily relate to the difference between the currency exchange rates in effect when non-local currency sales or operating costs are initially accrued and when such amounts are settled with the non-local currency.

Overall, we estimate that fluctuations in currency exchange rates had the following effects on our sales and income from operations for the periods indicated.

Impact of changes in currency exchange rates

three months ended June 30, 2013 vs June 30, 2012

	Transaction gains recognized			Translation gain/loss - impact of rate changes	Total currency impact 2013 vs 2012

Outlook

During the first half of 2013 we operated our production facilities at 91% of practical capacity, which was a higher utilization rate as compared to our utilization rates during the last three quarters of 2012. If economic conditions improve in the various regions of the world in the remainder of 2013, we expect demand for our TiO₂ products would continue to increase and we would expect our sales volumes to be higher in 2013 as compared to 2012. During 2013, we will continue to monitor current and anticipated near-term customer demand levels and align our production and inventories accordingly.

We have seen some moderation in the cost of TiO₂ feedstock ore procured in 2013, but such reductions will not be fully reflected in our cost of sales until the second half of 2013. Consequently, our cost of sales per metric ton of TiO₂ sold in the first half of 2013 was significantly higher than what we expect our cost of sales per metric ton of TiO₂ to be in the remainder of 2013, as a substantial portion of the TiO₂ products we sold in the first quarter of 2013 (and a portion of the TiO₂ products we sold in the second quarter of 2013) was produced with the higher-cost feedstock ore procured in 2012. Although the cost of feedstock ore has and continues to moderate, such reductions have been inadequate to compensate for the decline in selling prices for our products over the past year. We started 2013 with selling prices 16% lower than as compared to the beginning of 2012, and prices declined by an additional 7% in the first quarter of 2013 and 1% in the second quarter. In May 2013, we announced price increases for our TiO₂ products in all of our markets, implementation of which began in June 2013. As a result, our selling prices have generally stabilized, with increases in some accounts. We expect to implement additional increases in our selling prices during the second half of 2013. Industry data indicates that overall TiO₂ inventory held by producers has been significantly decreased, we believe most customers hold very low inventories of TiO₂ with many operating on a just-in-time basis. As a result, shortages of certain TiO₂ grades have begun to occur, and lead times for delivery are increasing. With the record sales volumes levels experienced in the first half of the year, we continue to see evidence of improvement in demand for our TiO₂ products, which we believe will support implementation of additional selling price increases in the near term. The extent to which we will be able to achieve these and other possible additional price increases during 2013 will depend on market conditions.

Overall, we expect that income (loss) from operations in 2013 will be significantly lower as compared to 2012, but we also expect income (loss) from operations in the second half of 2013 will improve from the first half of 2013. Our income from operations in the first half of 2012 was positively affected by the sale of TiO₂ produced with lower-cost feedstock ore purchased

Table of Contents

in 2011, while our loss from operations in the first half of 2013 was negatively impacted by the sale of TiO₂ produced with higher-cost feedstock ore purchased in 2012. The negative effect of such higher-cost feedstock ore on our full year 2013 operating results is expected to more than offset any favorable effect of higher sales and production volumes that would result assuming demand levels continue to improve, as well as the favorable impact of increases in our selling prices that we may be able to achieve during the remainder of 2013.

Due to the constraints, high capital costs and extended lead time associated with adding significant new TiO₂ production capacity, especially for premium grades of TiO₂ products produced from the chloride process, we believe increased and sustained profit margins will be necessary to financially justify major expansions of TiO₂ production capacity required to meet expected future growth in demand. As a result of customer decisions over the last year and the resulting adverse effect on global TiO₂ pricing, industry projects to increase TiO₂ production capacity have been cancelled or deferred indefinitely. Given the lead time required for such production capacity expansions, we expect a prolonged shortage of TiO₂ products will occur as economic conditions improve and global demand levels for TiO₂ continue to increase.

Our expectations as to the future of the TiO₂ industry are based upon a number of factors beyond our control, including worldwide growth of gross domestic product, competition in the marketplace, continued operation of competitors, unexpected or earlier-than-expected capacity additions or reductions and technological advances. If actual developments differ materially from our expectations, our results of operations could be unfavorably affected.

LIQUIDITY AND CAPITAL RESOURCES

Consolidated cash flows

Operating activities

Trends in cash flows as a result of our operating activities (excluding the impact of significant asset dispositions and relative changes in assets and liabilities) are generally similar to trends in our earnings.

Cash used in operating activities was \$67.0 million in the first six months of 2012 compared to \$15.1 million in the first six months of 2013. This \$51.9 million decrease in the amount of cash used was primarily due to the net effects of the following:

lower income from operations in 2013 of \$414.6 million;

lower net cash used in 2013 of \$366.1 million associated with relative changes in our inventories, receivables, payables and accruals, primarily due to the relative decrease in our inventories partially offset by the relative increase in receivables, as discussed below;

higher net distributions from our TiO₂ manufacturing joint venture in 2013 of \$34.1 million, primarily due to the timing of the joint venture's working capital needs; and

lower net cash paid for income taxes in 2013 of \$37.9 million resulting from our decreased profitability; and

Table of Contents

lower cash paid for interest in 2013 of \$10.6 million, primarily due to the timing of 2012 interest payments on our Senior Secured Notes redeemed in June 2012.

Changes in working capital were affected by accounts receivable and inventory changes. As shown below:

Our average days sales outstanding, or DSO, increased from December 31, 2012 to June 30, 2013, due to higher average daily net sales occurring later in the second quarter resulting from higher sales volumes partially offset by lower selling prices; and

Our average days sales in inventory, or DSI, decreased from December 31, 2012 to June 30, 2013 principally due to lower inventory raw material costs and lower inventory volumes in 2013.

For comparative purposes, we have also provided comparable prior year numbers below.

	December 31, 2011	June 30, 2012	December 31, 2012	June 30, 2013
DSO	55 days	69 days	61 days	66 days
DSI	104 days	84 days	102 days	51 days

Investing activities

Our capital expenditures of \$31.9 million and \$33.8 million in the six months ended June 30, 2012 and 2013, respectively, were primarily to maintain and improve the cost-effectiveness of our existing manufacturing facilities.

Financing activities

During the six months ended June 30, 2013, we:

voluntarily prepaid \$290.0 million principal amount on our term loan;

borrowed \$190.0 million under our new note payable with Contran, and subsequently repaid \$10.0 million;

borrowed 10 million (\$12.8 million when borrowed) on our European credit facility;

borrowed \$1.8 million from a Canadian economic development agency; and

paid quarterly dividends to stockholders of \$.30 per share for an aggregate dividend of \$34.8 million.

Outstanding debt obligations

At June 30, 2013, our consolidated debt comprised:

\$180.0 million under our note payable to Contran due in June 2018;

Edgar Filing: KRONOS WORLDWIDE INC - Form 10-Q

\$100.0 million outstanding (\$98.6 million carrying value, net of unamortized original issue discount) under our term loan due in June 2018;

20 million (\$26.1 million) under our European revolving credit facility which matures in September 2017; and

approximately \$3.1 million of other indebtedness.

- 32 -

Table of Contents

Our term loan, North American and European revolvers and our note payable to Contran contain a number of covenants and restrictions which, among other things, restrict our ability to incur additional debt, incur liens, pay dividends or merge or consolidate with, or sell or transfer substantially all of our assets to, another entity, and contains other provisions and restrictive covenants customary in lending transactions of this type. Our term loan requires that a specified financial covenant (leverage to EBITDA, as defined) be maintained at a ratio less than or equal to 3.5 to 1.0, and our European revolving credit facility also requires the maintenance of certain financial ratios. Certain of our credit agreements also contain provisions which could result in the acceleration of indebtedness prior to their stated maturity for reasons other than defaults for failure to comply with typical financial or payment covenants. For example, certain credit agreements allow the lender to accelerate the maturity of the indebtedness upon a change of control (as defined in the agreement) of the borrower. In addition, certain credit agreements could result in the acceleration of all or a portion of the indebtedness following a sale of assets outside the ordinary course of business. We are in compliance with all of our debt covenants at June 30, 2013. We believe that we will be able to continue to comply with the financial covenants contained in our credit facilities and term loan through their maturity; however if future operating results differ materially from our expectations we may be unable to maintain compliance. In such an event, we believe we have alternate sources of liquidity, including cash on hand and borrowings under our North American revolver or additional borrowings from Contran (neither of which contain any financial maintenance covenants) in order to adequately address any compliance issues which might arise.

Our assets consist primarily of investments in operating subsidiaries, and our ability to service parent-level obligations, including our term loan, depends in part upon the distribution of earnings of our subsidiaries, whether in the form of dividends, advances or payments on account of intercompany obligations or otherwise. The term loan is collateralized by, among other things, a first priority lien on (i) 100% of the common stock of certain of our U.S. wholly-owned subsidiaries, (ii) 65% of the common stock or other ownership interest of our Canadian subsidiary (Kronos Canada, Inc.) and certain first-tier European subsidiaries (Kronos Titan GmbH and Kronos Denmark ApS) and (iii) a \$362.1 million unsecured promissory note issued by our wholly-owned subsidiary, Kronos International, Inc. (KII). The term loan is also collateralized by a second priority lien on our U.S. assets which collateralize our North American revolving facility. Our North American revolving credit facility is collateralized by, among other things, a first priority lien on the borrower's trade receivables and inventories.

In July 2013, we voluntarily prepaid the remaining \$100 million principal amount outstanding under our term loan, using \$50 million of our cash on hand as well as borrowings of \$50 million under our revolving North American credit facility. We expect to recognize a non-cash pre-tax interest charge of approximately \$2.3 million in the third quarter of 2013 consisting of the write-off of the remaining unamortized original issue discount and deferred financing costs associated with such prepayment.

See Note 7 to our Condensed Consolidated Financial Statements.

Table of Contents

Future cash requirements

Liquidity

Our primary source of liquidity on an ongoing basis is cash flows from operating activities which is generally used to (i) fund working capital expenditures, (ii) repay any short-term indebtedness incurred for working capital purposes and (iii) provide for the payment of dividends. From time-to-time we will incur indebtedness, generally to (i) fund short-term working capital needs, (ii) refinance existing indebtedness or (iii) fund major capital expenditures or the acquisition of other assets outside the ordinary course of business. We will also from time-to-time sell assets outside the ordinary course of business and use the proceeds to (i) repay existing indebtedness, (ii) make investments in marketable and other securities, (iii) fund major capital expenditures or the acquisition of other assets outside the ordinary course of business or (iv) pay dividends.

The TiO₂ industry is cyclical, and changes in industry economic conditions significantly impact earnings and operating cash flows. Changes in TiO₂ pricing, production volumes and customer demand, among other things, could significantly affect our liquidity.

We routinely evaluate our liquidity requirements, alternative uses of capital, capital needs and availability of resources in view of, among other things, our dividend policy, our debt service and capital expenditure requirements and estimated future operating cash flows. As a result of this process, we have in the past and may in the future seek to reduce, refinance, repurchase or restructure indebtedness, raise additional capital, repurchase shares of our common stock, modify our dividend policy, restructure ownership interests, sell interests in our subsidiaries or other assets, or take a combination of these steps or other steps to manage our liquidity and capital resources. Such activities have in the past and may in the future involve related companies. In the normal course of our business, we may investigate, evaluate, discuss and engage in acquisition, joint venture, strategic relationship and other business combination opportunities in the TiO₂ industry. In the event of any future acquisition or joint venture opportunity, we may consider using then-available liquidity, issuing our equity securities or incurring additional indebtedness.

At June 30, 2013, we had aggregate cash, cash equivalents and restricted cash on hand of \$111.3 million, of which \$67.4 million was held by non-U.S. subsidiaries. At June 30, 2013, we had \$119.5 million available for borrowing under our North American revolving credit facility and 100 million (\$130.5 million) under our European credit facility. We could borrow all available amounts under each of our credit facilities without violating our existing debt covenants. In July 2013, we used \$50 million of available borrowings under our North American revolving credit facility as well as \$50 million of our cash on hand to voluntarily prepay the remaining \$100 million principal amount outstanding under our term loan. Based upon our expectation for the TiO₂ industry and anticipated demands on cash resources, we expect to have sufficient liquidity to meet our short term obligations (defined as the twelve-month period ending June 30, 2014) and our long-term obligations (defined as the five-year period ending June 30, 2018, our time period for long-term budgeting). If actual developments differ materially from our expectations, our liquidity could be adversely affected.

Table of Contents

Capital expenditures

We currently estimate that we will invest approximately \$65 million in capital expenditures to maintain and improve our existing facilities during 2013, including the \$33.8 million we have spent through June 30, 2013.

Stock repurchase program

In December 2010 our board of directors authorized the repurchase of up to 2.0 million shares of our common stock in open market transactions, including block purchases, or in privately-negotiated transactions at unspecified prices and over an unspecified period of time. To date, we have not made any repurchases under the plan and all 2.0 million shares are available for repurchase.

Off-balance sheet financing

We do not have any off-balance sheet financing agreements other than the operating leases discussed in our 2012 Annual Report.

Commitments and contingencies

See Notes 8 and 12 to the Condensed Consolidated Financial Statements for a description of certain income tax examinations currently underway and legal proceedings.

Recent accounting pronouncements

Not applicable

Critical accounting policies

For a discussion of our critical accounting policies, refer to Part I, Item 7 - Management's Discussion and Analysis of Financial Condition and Results of Operations in our 2012 Annual Report. There have been no changes in our critical accounting policies during the first six months of 2013.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURE ABOUT MARKET RISK

General

We are exposed to market risk, including currency exchange rates, interest rates and security prices, and raw material prices. There have been no material changes in these market risks since we filed our 2012 Annual Report, and refer you to Part I, Item 7A. - Quantitative and Qualitative Disclosure About Market Risk in our 2012 Annual Report. See also Note 13 to our Condensed Consolidated Financial Statements.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of disclosure controls and procedures

We maintain a system of disclosure controls and procedures. The term disclosure controls and procedures, as defined by regulations of the SEC, means controls and other procedures that are designed to ensure that information required to be disclosed in the reports that we file or submit to the SEC under the Securities Exchange Act of 1934, as amended (the Exchange

Table of Contents

Act), is recorded, processed, summarized and reported, within the time periods specified in the SEC's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information we are required to disclose in the reports we file or submit to the SEC under the Exchange Act is accumulated and communicated to our management, including our principal executive officer and our principal financial officer, or persons performing similar functions, as appropriate to allow timely decisions to be made regarding required disclosure. Each of Steven L. Watson, our Chief Executive Officer, and Gregory M. Swalwell, our Executive Vice President and Chief Financial Officer, have evaluated the design and operating effectiveness of our disclosure controls and procedures as of June 30, 2013. Based upon their evaluation, these executive officers have concluded that our disclosure controls and procedures are effective as of June 30, 2013.

Internal control over financial reporting

We also maintain internal control over financial reporting. The term "internal control over financial reporting," as defined by regulations of the SEC, means a process designed by, or under the supervision of, our principal executive and principal financial officers, or persons performing similar functions, and effected by our board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with GAAP, and includes those policies and procedures that:

Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of our assets,

Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and that our receipts and expenditures are being made only in accordance with authorizations of our management and directors, and

Provide reasonable assurance regarding prevention or timely detection of an unauthorized acquisition, use or disposition of our assets that could have a material effect on our Condensed Consolidated Financial Statements.

As permitted by the SEC, our assessment of internal control over financial reporting excludes (i) internal control over financial reporting of our equity method investees and (ii) internal control over the preparation of our financial statement schedules required by Article 12 of Regulation S-X. However, our assessment of internal control over financial reporting with respect to our equity method investees did include our controls over the recording of amounts related to our investment that are recorded in our Condensed Consolidated Financial Statements, including controls over the selection of accounting methods for our investments, the recognition of equity method earnings and losses and the determination, valuation and recording of our investment account balances.

Table of Contents

Changes in internal control over financial reporting

There has been no change to our internal control over financial reporting during the quarter ended June 30, 2013 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.
