THE CHUBB CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1) General

The accompanying condensed consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles (GAAP) and include the accounts of The Chubb Corporation (Chubb) and its subsidiaries (collectively, the Corporation). Significant intercompany transactions have been eliminated in consolidation.

The amounts included in this report are unaudited but include those adjustments, consisting of normal recurring items, that management considers necessary for a fair presentation. These condensed consolidated financial statements should be read in conjunction with the consolidated financial statements and related notes in the Notes to Consolidated Financial Statements included in the Corporation's Annual Report on Form 10-K for the year ended December 31, 2013.

2) Invested Assets

(a) The amortized cost and fair value of fixed maturities and equity securities were as follows:

	September 30, 2014			
	Amortized	Gross	Gross	Fair
	Cost	Unrealized	Unrealized	Value
		Appreciation	Depreciation	
		<i>(in millions)</i>		
Fixed maturities				
Tax exempt	\$ 18,214	\$ 1,144	\$ 18	\$ 19,340
Taxable				
U.S. government and government agency and authority obligations	1,979	40	2	2,017

Foreign government and government agency obligations	6,531	257	7	6,781
Residential mortgage-backed securities	210	21	1	230
Commercial mortgage-backed securities	1,079	21	2	1,098
	18,624	672	47	19,249
Total fixed maturities	\$ 36,838	\$ 1,816	\$ 65	\$ 38,589
Equity securities	\$ 1,098	\$ 804	\$ 14	\$ 1,888

Table of Contents

Page 7

	December 31, 2013			
	Amortized Cost	Gross Unrealized Appreciation	Gross Unrealized Depreciation	Fair Value
			(in millions)	
Fixed maturities				
Tax exempt	\$ 17,808	\$ 802	\$ 189	\$ 18,421
Taxable				
U.S. government and government agency and authority obligations	784	27	9	802
Corporate bonds	9,032	370	88	9,314
Foreign government and government agency obligations	6,719	206	35	6,890
Residential mortgage-backed securities	277	23	1	299
Commercial mortgage-backed securities	1,339	29	3	1,365
	18,151	655	136	18,670
Total fixed maturities	\$ 35,959	\$ 1,457	\$ 325	\$ 37,091
Equity securities	\$ 1,057	\$ 756	\$ 3	\$ 1,810

The fair value and amortized cost of fixed maturities at September 30, 2014 by contractual maturity were as follows:

	Fair Value	Amortized Cost
	(in millions)	
Due in one year or less	\$ 2,097	\$ 2,073
Due after one year through five years	14,234	13,691
Due after five years through ten years	12,617	11,923
Due after ten years	8,313	7,862
	37,261	35,549
Residential mortgage-backed securities	230	210
Commercial mortgage-backed securities	1,098	1,079
	\$ 38,589	\$ 36,838

Actual maturities could differ from contractual maturities because borrowers may have the right to call or prepay obligations.

The Corporation's equity securities comprise a diversified portfolio of primarily U.S. publicly-traded common stocks.

The Corporation is involved in the normal course of business with variable interest entities (VIEs) primarily as a passive investor in residential mortgage-backed securities, commercial mortgage-backed securities and private equity limited partnerships issued by third party VIEs. The Corporation is not the primary beneficiary of these VIEs. The Corporation's maximum exposure to loss with respect to these investments is limited to the investment carrying values included in the Corporation's consolidated balance sheet and any unfunded partnership commitments.

	\$ 2,762	\$ 29	\$ 2,072	\$ 50	\$ 4,834	\$ 79

Table of Contents

Page 9

At September 30, 2014, approximately 780 individual fixed maturities and 20 individual equity securities were in an unrealized loss position. The Corporation does not have the intent to sell and it is not more likely than not that the Corporation will be required to sell these fixed maturities before the securities recover to their amortized cost value. In addition, the Corporation believes that none of the declines in the fair values of these fixed maturities relate to credit losses. The Corporation has the intent and ability to hold the equity securities in an unrealized loss position for a period of time sufficient to allow for the recovery of cost. The Corporation believes that none of the declines in the fair value of these fixed maturities and equity securities were other than temporary at September 30, 2014.

The following table summarizes, for all investment securities in an unrealized loss position at December 31, 2013, the aggregate fair value and gross unrealized depreciation, including unrealized other-than-temporary impairment losses, by investment category and length of time that individual securities have continuously been in an unrealized loss position.

	Less Than 12 Months		12 Months or More		Total

	\$ 110	\$ 18	\$ 351	\$ 335

(d) As of September 30, 2014 and December 31, 2013, fixed maturities still held by the Corporation for which a portion of their other-than-temporary impairment losses were recognized in other comprehensive income had cumulative credit-related losses of \$18 million and \$20 million, respectively, recognized in net income.

Table of Contents

Page 11

3) Comprehensive Income

Comprehensive income is defined as all changes in shareholders' equity, except those arising from transactions with shareholders. Comprehensive income includes net income and other comprehensive income or loss, which for the Corporation consists of changes in unrealized appreciation or depreciation of investments carried at fair value, changes in unrealized other-than-temporary impairment losses of fixed maturities, changes in postretirement benefit costs not yet recognized in net income and changes in foreign currency translation gains or losses.

The components of other comprehensive income or loss were as follows:

	Periods Ended September 30, 2014					
	Third Quarter			Nine Months		
	Before Tax	Income Tax	Net of Tax (in millions)	Before Tax	Income Tax	Net of Tax
Net unrealized holding gains (losses) arising during the period	\$ (6)	\$ (3)	\$ (3)	\$ 854	\$ 298	\$ 556
Reclassification adjustment for net realized gains included in net income	65	22	43	198	69	129
Net unrealized gains (losses) recognized in other comprehensive income or loss	(71)	(25)	(46)	656	229	427
Postretirement benefit gain not yet recognized in net income arising during the period	1		1	1		1
Reclassification adjustment for the amortization of net actuarial loss and prior service cost included in net income (a)	(9)	(4)	(5)	(26)	(10)	(16)
Net change in postretirement benefit costs not yet recognized in net income	10	4	6	27	10	17
Foreign currency translation losses	(40)	(14)	(26)	(62)	(21)	(41)
Total other comprehensive income (loss)	\$ (101)	\$ (35)	\$ (66)	\$ 621	\$ 218	\$ 403

(a) Postretirement benefit costs recognized in net income during the period are included among several of the loss and expense components presented in the consolidated statements of income.

(a) Postretirement benefit costs recognized in net income during the period are included among several of the loss and expense components presented in the consolidated statements of income.

4) Segments Information

The principal business of the Corporation is the sale of property and casualty insurance. The profitability of the property and casualty insurance business depends on the results of both underwriting operations and investments, which are viewed as two distinct operations. The underwriting operations are managed and evaluated separately from the investment function.

The property and casualty insurance subsidiaries underwrite most lines of property and casualty insurance. Underwriting operations consist of four separate business units: personal insurance, commercial insurance, specialty insurance and reinsurance assumed. The personal segment targets the personal insurance market. The personal classes include automobile, homeowners and other personal coverages. The commercial segment includes those classes of business that are generally available in broad markets and are of a more commodity nature. Commercial classes include multiple peril, casualty, workers' compensation and property and marine. The specialty segment includes those classes of business that are available in more limited markets since they require specialized underwriting and claim settlement. Specialty classes include professional liability coverages and surety. The reinsurance assumed business has been in runoff since the transfer of the ongoing reinsurance assumed business to a reinsurance company in 2005.

Corporate and other includes investment income earned on corporate invested assets, corporate expenses and the results of the Corporation's non-insurance subsidiaries.

5) Fair Values of Financial Instruments

Fair values of financial instruments are determined by management using valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. Fair values are generally measured using quoted prices in active markets for identical assets or liabilities or other inputs, such as quoted prices for similar assets or liabilities, that are observable, either directly or indirectly. In those instances where observable inputs are not available, fair values are measured using unobservable inputs for the asset or liability. Unobservable inputs reflect the Corporation's own assumptions about the assumptions that market participants would use in pricing the asset or liability and are developed based on the best information available in the circumstances. Fair value estimates derived from unobservable inputs are affected by the assumptions used, including the discount rates and the estimated amounts and timing of future cash flows. The derived fair value estimates cannot be substantiated by comparison to independent markets and are not necessarily indicative of the amounts that would be realized in a current market exchange. Certain financial instruments, particularly insurance contracts, are excluded from fair value disclosure requirements.

The methods and assumptions used to estimate the fair values of financial instruments are as follows:

- (i) The carrying value of short term investments approximates fair value due to the short maturities of these investments.
- (ii) Fair values of fixed maturities are determined by management, utilizing prices obtained from a third party, nationally recognized pricing service or, in the case of securities for which prices are not provided by a pricing service, from third party brokers. For fixed maturities that have quoted prices in active markets, market quotations are provided. For fixed maturities that do not trade on a daily basis, the pricing service and brokers provide fair value estimates using a variety of inputs including, but not limited to, benchmark yields, reported trades, broker/dealer quotes, issuer spreads, bids, offers, reference data, prepayment rates and measures of volatility. Management reviews on an ongoing basis the reasonableness of the methodologies used by the relevant pricing service and brokers. In addition, management, using the prices received for the securities from the pricing service and brokers, determines the aggregate portfolio price performance and reviews it against applicable indices. If management believes that significant discrepancies exist, it will discuss these with the relevant pricing service or broker to resolve the discrepancies.
- (iii) Fair values of equity securities are determined by management, utilizing quoted market prices.
- (iv) Fair values of long term debt issued by Chubb are determined by management, utilizing prices obtained from a third party, nationally recognized pricing service.

Table of Contents

Page 15

The carrying values and fair values of financial instruments were as follows:

	September 30, 2014		December 31, 2013	
	Carrying Value	Fair Value	Carrying Value	Fair Value
	<i>(in millions)</i>			
Assets				
Invested assets				
Short term investments	\$ 2,047	\$ 2,047	\$ 2,114	\$ 2,114
Fixed maturities	38,589	38,589	37,091	37,091
Equity securities	1,888	1,888	1,810	1,810
Liabilities				
Long term debt	3,300	3,975	3,300	3,806

At September 30, 2014 and December 31, 2013, a pricing service provided fair value amounts for approximately 99% of the Corporation's fixed maturities. The prices obtained from a pricing service and brokers generally are non-binding, but are reflective of current market transactions in the applicable financial instruments.

At September 30, 2014 and December 31, 2013, the Corporation held an insignificant amount of financial instruments in its investment portfolio for which a lack of market liquidity impacted the determination of fair value.

The fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels as follows:

Level 1 Unadjusted quoted prices in active markets for identical financial instruments.

Level 2 Other inputs that are observable for the financial instrument, either directly or indirectly.

Level 3 Significant unobservable inputs.

Table of Contents

Page 16

The fair value of financial instruments categorized based upon the lowest level of input that was significant to the fair value measurement was as follows:

	September 30, 2014			
	Level 1	Level 2	Level 3	Total
	(in millions)			
Assets				
Short term investments	\$ 193	\$ 1,854	\$	\$ 2,047

Item 2 Management's Discussion and Analysis of Financial Condition and Results of Operations

Management's Discussion and Analysis of Financial Condition and Results of Operations addresses the financial condition of the Corporation as of September 30, 2014 compared with December 31, 2013 and the results of operations for the nine months and three months ended September 30, 2014 and 2013. This discussion should be read in conjunction with the condensed consolidated financial statements and related notes contained in this report and the consolidated financial statements and related notes and management's discussion and analysis of financial condition and results of operations included in the Corporation's Annual Report on Form 10-K for the year ended December 31, 2013.

Cautionary Statement Regarding Forward-Looking Information

Certain statements in this document are forward-looking statements as that term is defined in the Private Securities Litigation Reform Act of 1995 (PSLRA). These forward-looking statements are made pursuant to the safe harbor provisions of the PSLRA and include statements regarding market conditions in 2014, including premium volume, rate trends, the pricing environment and competition; the cost of our property reinsurance program in 2014; our loss reserve and reinsurance recoverable estimates; property and casualty investment income after taxes for the full year 2014; the repurchase of common stock under our share repurchase program; the valuations of our pension and other postretirement benefit plan liabilities; and our financial position, capital adequacy and funding of liquidity needs. Forward-looking statements frequently can be identified by words such as believe, expect, anticipate, intend, plan, will, may, should, could, would, likely, estimate, or other similar expressions. Forward-looking statements are made based upon management's current expectations and beliefs concerning trends and future developments and their potential effects on us. These statements are not guarantees of future performance. Actual results may differ materially from those suggested by forward-looking statements as a result of risks and uncertainties, which include, among others, those discussed or identified in our Annual Report on Form 10-K for the year ended December 31, 2013 and from time to time in our other public filings with the Securities and Exchange Commission and those associated with:

global political, economic and market conditions, particularly in the jurisdictions in which we operate and/or invest, including:

changes in credit ratings, interest rates, market credit spreads and the performance of the financial markets;

currency fluctuations;

the effects of inflation;

changes in domestic and foreign laws, regulations and taxes;

changes in competition and pricing environments;

regional or general changes in asset valuations;

the inability to reinsure certain risks economically; and

changes in the litigation environment;

the effects of the outbreak or escalation of war or hostilities;

the occurrence of terrorist attacks, including any nuclear, biological, chemical or radiological events;

Table of Contents

Page 20

premium pricing and profitability or growth estimates overall or by lines of business or geographic area, and related expectations with respect to the timing and terms of any required regulatory approvals;

adverse changes in loss cost trends;

our ability to retain existing business and attract new business at acceptable rates;

our expectations with respect to cash flow and investment income and with respect to other income;

the adequacy of our loss reserves, including:

our expectations relating to reinsurance recoverables;

the willingness of parties, including us, to settle disputes;

developments in judicial decisions or regulatory or legislative actions relating to coverage and liability, in particular, for asbestos, toxic waste and other mass tort claims;

development of new theories of liability;

our estimates relating to ultimate asbestos liabilities; and

the impact from the bankruptcy protection sought by various asbestos producers and other related businesses;

the availability and cost of reinsurance coverage;

the occurrence of significant weather-related or other natural or human-made disasters, particularly in locations where we have concentrations of risk or changes to our estimates (or the assessments of rating agencies and other third parties) of our potential exposure to such events;

the impact of economic factors on companies on whose behalf we have issued surety bonds, and in particular, on those companies that file for bankruptcy or otherwise experience deterioration in creditworthiness;

Edgar Filing: CHUBB CORP - Form 10-Q

the effects of disclosures by, and investigations of, companies we insure, particularly with respect to our lines of business that have a longer time span, or tail, between the incidence of a loss and the settlement of the claim;

the impact of legislative, regulatory, judicial and similar developments on companies we insure, particularly with respect to our longer tail lines of business;

the impact of legislative, regulatory, judicial and similar developments on our business, including those relating to insurance industry reform, terrorism, catastrophes, the financial markets, solvency standards, capital requirements, accounting guidance and taxation;

any downgrade in our claims-paying, financial strength or other credit ratings;

Table of Contents

Page 21

the ability of our subsidiaries to pay us dividends;

our plans to repurchase shares of our common stock, including as a result of changes in:

our financial position and financial results;

our capital position and/or capital adequacy levels required to maintain our existing ratings from independent rating agencies;

our share price;

investment opportunities;

opportunities to profitably grow our property and casualty insurance business; and

corporate and regulatory requirements; and

our ability to implement management's strategic plans and initiatives.

Chubb assumes no obligation to update any forward-looking statement set forth in this document, which speak as of the date hereof.

Critical Accounting Estimates and Judgments

The consolidated financial statements include amounts based on informed estimates and judgments of management for transactions that are not yet complete. Such estimates and judgments affect the reported amounts in the financial statements. Those estimates and judgments that were most critical to the preparation of the financial statements involved the determination of loss reserves and the recoverability of related reinsurance recoverables and the evaluation of whether a decline in value of any investment is temporary or other than temporary. These estimates and judgments, which are discussed in Item 7 of our Annual Report on Form 10-K for the year ended December 31, 2013 as supplemented within the following analysis of our results of operations, require the use of assumptions about matters that are highly uncertain and therefore are subject to change as facts and circumstances develop. If different estimates and judgments had been applied, materially different amounts might have been reported in the financial statements.

Page 22

Overview

The following highlights do not address all of the matters covered in the other sections of Management's Discussion and Analysis of Financial Condition and Results of Operations or contain all of the information that may be important to Chubb's shareholders or the investing public. This overview should be read in conjunction with the other sections of Management's Discussion and Analysis of Financial Condition and Results of Operations.

Net income was \$1.5 billion in the first nine months of 2014 and \$594 million in the third quarter compared with \$1.8 billion and \$541 million, respectively, in the same periods of 2013. Net income was lower in the first nine months of 2014 compared with the same period of 2013 due to lower operating income, which we define as net income excluding realized investment gains and losses after tax. Net income was higher in the third quarter of 2014 compared with the same period of 2013 due to higher net realized investment gains.

Operating income was \$1.3 billion in the first nine months of 2014 and \$522 million in the third quarter compared with \$1.6 billion and \$529 million, respectively, in the same periods of 2013. The lower operating income in the first nine months of 2014 was due primarily to lower underwriting income in our property and casualty insurance business and, to a lesser extent, a decrease in property and casualty investment income. Management uses operating income, a non-GAAP financial measure, among other measures, to evaluate its performance because the realization of investment gains and losses in any period could be discretionary as to timing and can fluctuate significantly, which could distort the analysis of operating trends.

Underwriting results were highly profitable in the first nine months and third quarter of 2014 and 2013. Our combined loss and expense ratio was 89.6% in the first nine months of 2014 and 85.8% in the third quarter compared with 86.4% and 85.7% in the respective periods of 2013. Results were less profitable in the first nine months of 2014 compared to the same period of 2013 due primarily to a higher current accident year loss ratio excluding catastrophes and, to a lesser extent, a lower amount of favorable prior year loss development and a higher impact of catastrophes. Results were similarly profitable in the third quarter of 2014 and 2013 as a higher current accident year loss ratio excluding catastrophes and a lower amount of favorable prior year loss development in the third quarter of 2014 were substantially offset by a lower impact of catastrophes and a lower expense ratio. The impact of catastrophes accounted for 4.6 percentage points of the combined ratio in the first nine months of 2014 and 2.4 percentage points in the third quarter compared with 3.9 and 3.0 percentage points, respectively, in the same periods of 2013.

During the first nine months and third quarter of 2014, we estimate that we experienced overall favorable prior year loss development of about \$480 million and \$155 million, respectively, on loss reserves established as of the previous year end. We estimate that during the first nine months and third quarter of 2013, we experienced overall favorable prior year loss development of about \$595 million and \$190 million, respectively. In each period we experienced favorable prior year loss development in each segment of our insurance business.

Table of Contents

Page 23

Total net premiums written increased by 3% in the first nine months of 2014 and 5% in the third quarter compared with the same periods of 2013. Net premiums written in the United States increased by 4% in the first nine months of 2014 and 5% in the third quarter. Net premiums written outside the United States decreased by 1% in the first nine months of 2014 and increased by 4% in the third quarter, when measured in U.S. dollars. When measured in local currencies, such premiums increased slightly in the first nine months of 2014 and more significantly in the third quarter.

Property and casualty investment income after tax decreased by 4% in the first nine months and third quarter of 2014 compared with the same periods of 2013, due to a decline in the average yield on our investment portfolio. Management uses property and casualty investment income after tax, a non-GAAP financial measure, to evaluate its investment results because it reflects the impact of any change in the proportion of tax exempt investment income to total investment income and is therefore more meaningful for analysis purposes than investment income before income tax.

Net realized investment gains before tax were \$351 million (\$228 million after tax) in the first nine months of 2014 and \$110 million (\$72 million after tax) in the third quarter compared with \$335 million (\$218 million after tax) and \$18 million (\$12 million after tax), respectively, in the same periods of 2013. The net realized investment gains in the first nine months and third quarter of 2014 were primarily related to investments in limited partnerships, which generally are reported on a one quarter lag, sales of equity securities and, to a lesser extent, sales of fixed maturity securities. In the first nine months of 2013, net realized investment gains included the recognition of a gain in connection with the business combination of an issuer in which we held equity securities and warrants. The remaining net realized gains in the first nine months of 2013 were primarily related to investments in limited partnerships and sales of equity securities. The net realized gains in the third quarter of 2013 were primarily related to investments in limited partnerships.

A summary of our consolidated net income is as follows:

	Periods Ended September 30			
	Nine Months		Third Quarter	
	2014	2013	2014	2013
	(in millions)			
Property and casualty insurance	\$ 1,925	\$ 2,298	\$ 766	\$ 782
Corporate and other	(177)	(182)	(58)	(61)
Consolidated operating income before income tax	1,748	2,116	708	721
Federal and foreign income tax	434	558	186	192
Consolidated operating income	1,314	1,558	522	529
Realized investment gains after income tax	228	218	72	12
Consolidated net income	\$ 1,542	\$ 1,776	\$ 594	\$ 541

Page 24

Property and Casualty Insurance

A summary of the results of operations of our property and casualty insurance business is as follows:

	Periods Ended September 30			
	Nine Months 2014	2013	Third Quarter 2014	2013
	<i>(in millions)</i>			
Underwriting				
Net premiums written	\$ 9,454	\$ 9,186	\$ 3,169	\$ 3,029
Increase in unearned premiums	(242)	(160)	(50)	(2)
Premiums earned	9,212	9,026	3,119	3,027
Losses and loss expenses	5,316	4,862	1,679	1,600
Operating costs and expenses	2,987	2,960	1,004	986
Increase in deferred policy acquisition costs	(48)	(69)	(14)	(12)
Dividends to policyholders	32	28	11	10
Underwriting income	925	1,245	439	443
Investments				
Investment income before expenses	1,034	1,076	338	352
Investment expenses	30	34	11	10
Investment income	1,004	1,042	327	342
Other income (charges)	(4)	11		(3)
Property and casualty income before tax	\$ 1,925	\$ 2,298	\$ 766	\$ 782
Property and casualty investment income after tax	\$ 822	\$ 854	\$ 270	\$ 280

Property and casualty income before tax was lower in the first nine months of 2014 compared with the same period of 2013, due to lower underwriting income and, to a lesser extent, a decrease in investment income. Property and casualty income before tax was slightly lower in the third quarter of 2014 compared with the same period of 2013, due primarily to a decrease in investment income. The decrease in underwriting income in the first nine months of 2014 compared with the same period of 2013 was primarily attributable to a higher current accident year loss ratio excluding catastrophes and, to a lesser extent, a lower amount of favorable prior year loss development and a higher impact of catastrophes. Underwriting income was similar in the third quarter of 2014 and 2013 as a higher current accident year loss ratio excluding catastrophes and a lower amount of favorable prior year loss development in the 2014 period were substantially offset by a lower impact of catastrophes and a lower expense ratio. The decrease in investment income in the first nine months and third quarter of 2014 compared with the same periods of 2013 was due to a decline in the average yield on our investment portfolio.

Table of Contents

Page 25

The profitability of our property and casualty insurance business depends on the results of both our underwriting and investment operations. We view these as two distinct operations since the underwriting functions are managed separately from the investment function. Accordingly, in assessing our performance, we evaluate underwriting results separately from investment results.

Underwriting Results

We evaluate the underwriting results of our property and casualty insurance business in the aggregate and for each of our business units.

Net Premiums Written

Net premiums written were \$9.5 billion in the first nine months of 2014 and \$3.2 billion in the third quarter compared with \$9.2 billion and \$3.0 billion, respectively, in the same periods of 2013. Net premiums written by business unit were as follows:

	Nine Months Ended September 30			Quarter Ended September 30		
	2014	2013	% Incr.	2014	2013	% Incr.
	<i>(in millions)</i>			<i>(in millions)</i>		
Personal insurance	\$ 3,389	\$ 3,247	4%	\$ 1,167	\$ 1,106	6%
Commercial insurance	4,084	4,014	2	1,301	1,255	4
Specialty insurance	1,980	1,928	3	701	670	5
Total insurance	9,453	9,189	3	3,169	3,031	5
Reinsurance assumed	1	(3)	*		(2)	*
Total	\$ 9,454	\$ 9,186	3	\$ 3,169	\$ 3,029	5

* The change in net premiums written is not presented for this business unit since it is in runoff.

Net premiums written increased by 3% in the first nine months of 2014 and 5% in the third quarter compared with the same periods of 2013. Net premiums written in the United States, which represented 76% of our total net premiums written in the first nine months of 2014, increased by 4% in the first nine months of 2014 and 5% in the third quarter. Net premiums written outside the United States decreased by 1% in the first nine months of 2014 and increased by 4% in the third quarter, when measured in U.S. dollars. When measured in local currencies, such premiums increased slightly in the first nine months of 2014 and more significantly in the third quarter.

We classify business as written in the United States or outside the United States based on the location of the risk associated with the underlying policies. The method of determining location of risk varies by class of business. Location of risk for property classes is typically based on the physical location of the covered property, while location of risk for liability classes may be based on the main location of the insured, or in the case of the workers' compensation class, the primary work location of the covered employee.

Table of Contents

Page 26

Growth in net premiums written in the United States in the first nine months and third quarter of 2014 occurred in each segment of our business, with the most significant growth occurring in our personal insurance segment. Net premiums written in the United States also increased in our specialty insurance segment in the first nine months and third quarter of 2014, while premium growth in our commercial insurance segment was modest in both periods of 2014. Growth in our personal insurance business in the first nine months and third quarter of 2014 was attributable to higher rates upon renewal, higher insured exposures, strong retention of existing business, and new business. In the first nine months and third quarter of 2014, growth in net premiums written in our commercial insurance segment and our professional liability business, which is the predominant component of our specialty insurance segment, reflected renewal rate increases, strong retention of existing business, as well as new business.

Average renewal rates for our personal insurance business in the United States were up modestly in the first nine months and third quarter of 2014 compared with expiring rates, driven particularly by our homeowners and excess liability classes of business. The amounts of coverage purchased or the insured exposures, both of which are bases upon which we calculate the premiums we charge, were also up modestly in both periods. Retention levels in our personal insurance business in the United States remained strong in the first nine months and third quarter of 2014. The level of new business in the United States in our personal insurance business was flat in the first nine months of 2014 and down modestly in the third quarter compared with the same periods of 2013. Average renewal rates in the first nine months and third quarter of 2014 in the United States were up in both our commercial insurance and professional liability businesses, but more so in our professional liability business. The amounts of coverage purchased or the insured exposures were down slightly in our commercial insurance business in the first nine months and third quarter of 2014 compared with the same periods in 2013. Such amounts were also down slightly in our professional liability business in the first nine months of 2014 but were flat in the third quarter. We continued to retain a high percentage of our existing commercial insurance and professional liability business in the United States. Retention levels in the first nine months and third quarter of 2014 were modestly higher in our commercial insurance and professional liability businesses compared with those in the same periods of 2013. We continued to seek renewal rate increases in most of the classes within the commercial insurance and professional liability businesses and to take underwriting actions to improve profitability. As components of our business have approached rate adequacy due to pricing and underwriting actions over the last several years, the level of renewal rate increases has moderated and we have achieved higher retention levels. The level of new business in the United States was higher in both our commercial insurance and professional liability businesses in the first nine months of 2014 compared with the same period of 2013. In the third quarter of 2014, the level of new business in the United States was flat in our commercial insurance business and was higher in our professional liability business compared with the same period of 2013.

Table of Contents

Page 27

Outside the United States, net premiums written decreased slightly in the first nine months of 2014 compared with the same period of 2013, as a modest decrease in our personal insurance segment and a slight decrease in our specialty insurance segment were partially offset by a modest increase in our commercial insurance segment. In the third quarter of 2014, net premiums written outside the United States increased in our commercial and, to a lesser extent, specialty insurance segments while net premiums written were flat in our personal insurance segment compared with the same period of 2013. Net premiums written outside the United States excluding the effect of foreign currency translation increased in the first nine months of 2014, with modest growth in the commercial insurance segment and slight growth in the personal insurance and specialty insurance segments. Such premiums also increased in the third quarter of 2014 in each segment of our business, with the most significant growth occurring in the commercial insurance segment.

Net premiums written in our personal insurance business outside the United States in the first nine months and third quarter of 2014 reflected a modest overall average renewal rate increase compared with expiring rates, driven by a significant increase in our automobile business. Average renewal rates outside the United States were up slightly in both our commercial insurance and our professional liability businesses in the first nine months and third quarter of 2014. The amounts of insured exposures were up slightly in our personal insurance business and down slightly in both our commercial insurance and professional liability businesses outside the United States in both the first nine months and third quarter of 2014 compared with the same periods of 2013. Retention levels outside the United States were modestly higher in our commercial insurance business in the first nine months and third quarter of 2014 compared with the same periods of 2013. Retention levels outside the United States were about the same in our professional liability business in the first nine months of 2014 and modestly higher in the third quarter compared with the same periods of 2013. In our commercial insurance and professional liability businesses, the level of new business written outside the United States was higher in the first nine months and third quarter of 2014 compared with the same periods of 2013.

We expect our net premiums written for the full year 2014 will increase at a rate similar to the rate in the first nine months of the year, assuming average foreign currency to U.S. dollar exchange rates for the remainder of the year remain similar to September 30, 2014 levels. We expect that during the remainder of 2014 market conditions will remain competitive and average renewal rate increases in some of our commercial and professional liability classes of business may be at levels below those achieved in recent years.

Ceded Reinsurance

Our premiums written are net of amounts ceded to reinsurers who assume a portion of the risk under the insurance policies we write that are subject to reinsurance.

The most significant component of our ceded reinsurance program is property reinsurance. We purchase two main types of property reinsurance: catastrophe and property per risk.

Table of Contents

Page 28

For property risks in the United States and Canada we purchase traditional catastrophe reinsurance, including our primary treaty, which we refer to as our North American catastrophe treaty, as well as supplemental catastrophe reinsurance that provides additional coverage for our exposures in the northeast United States. For certain exposures in the United States, we have also arranged for the purchase of multi-year, collateralized reinsurance funded through the issuance of collateralized risk-linked securities, known as catastrophe bonds. For events outside the United States, we also purchase traditional catastrophe reinsurance.

We renewed our primary traditional property catastrophe treaties and our commercial property per risk treaty in April 2014 with limit structures similar to the expiring treaties. Certain coverage provided under the North American catastrophe treaty was modestly enhanced. The supplemental catastrophe reinsurance that provides coverage for our exposures in the northeast United States was renewed in June 2014 on terms similar to the expiring coverage. In March 2014, we arranged for the purchase of reinsurance through the issuance of a catastrophe bond to replace the portion of a catastrophe bond that expired in March 2014.

The North American catastrophe treaty has an initial retention of \$500 million and provides coverage for exposures in the United States and Canada of approximately 34% of losses (net of recoveries from other available reinsurance) between \$500 million and \$900 million and approximately 75% of losses (net of recoveries) between \$900 million and \$1.75 billion. For certain catastrophic events in the northeast United States or along the southern U.S. coastline, the combination of the North American catastrophe treaty, supplemental catastrophe reinsurance and/or the catastrophe bond arrangements provide additional coverages as discussed below.

The catastrophe bond arrangements provide reinsurance coverage for specific types of losses in specific geographic locations. They are generally designed to supplement coverage provided under the North American catastrophe treaty. We currently have three catastrophe bond arrangements in effect that expire between 2015 and 2018. We have a \$250 million reinsurance arrangement that expires in March 2015 and a \$270 million reinsurance arrangement that incepted in March 2014 and expires in March 2018. Both of these catastrophe bond arrangements provide coverage for our exposure to homeowners and commercial losses related to certain perils, including hurricanes, earthquakes, severe thunderstorms and winter storms in twelve states in the northeast United States and the District of Columbia. The \$270 million reinsurance arrangement provides similar coverage for named storms in addition to hurricanes. We also have a \$150 million reinsurance arrangement that expires in March 2016 that provides coverage for homeowners-related hurricane and severe thunderstorm losses in eight states along the southern U.S. coastline.

For the indicated catastrophic events in the northeast United States, the combination of the North American catastrophe treaty, the supplemental catastrophe reinsurance, and the \$250 million and \$270 million catastrophe bond arrangements provides additional coverage of approximately 63% of losses (net of recoveries from other available reinsurance) between \$1.75 billion and \$3.65 billion.

Table of Contents

Page 29

For hurricane and severe thunderstorm events along the southern U.S. coastline, the \$150 million catastrophe bond arrangement provides additional coverage of approximately 50% of homeowners-related hurricane and severe thunderstorm losses (net of recoveries from other available reinsurance) between \$855 million and \$1.15 billion.

For hurricane events in Florida, in addition to the coverage provided by the North American catastrophe treaty and the \$150 million catastrophe bond arrangement discussed above, we have reinsurance from the Florida Hurricane Catastrophe Fund, which is a state-mandated fund designed to reimburse insurers for a portion of their residential catastrophic hurricane losses. Our participation in this program, for which the most recent annual period began on June 1, 2014, provides coverage of 90% of homeowners-related hurricane losses in Florida in excess of our initial retention of \$160 million per event. Under the terms of the program, our aggregate recoveries during the annual coverage period are limited to approximately \$385 million, based on our current level of participation.

Our primary property catastrophe treaty for events outside the United States, including Canada, provides coverage of approximately 75% of losses (net of recoveries from other available reinsurance) between \$100 million and \$350 million. For catastrophic events in Australia and Canada, additional reinsurance provides coverage of 80% of losses (net of recoveries from other available reinsurance) between \$350 million and \$475 million.

Our commercial property per risk treaty provides coverage for property exposures both inside and outside the United States. Depending upon the currency in which the covered insurance policy was issued, the treaty provides coverage per risk of approximately \$555 million to \$790 million in excess of our initial retention, which is generally between \$25 million and \$35 million.

In addition to our major property catastrophe and property per risk treaties, we purchase several smaller property treaties that provide coverage for specific classes of business or locations having concentrations of risk.

Recoveries under our property reinsurance treaties are subject to certain coinsurance requirements that affect the interaction of some elements of our reinsurance program.

Our property reinsurance treaties generally contain terrorism exclusions for acts perpetrated by foreign terrorists, and for nuclear, biological, chemical and radiological loss causes whether such acts are perpetrated by foreign or domestic terrorists.

The renewal rates associated with the North American catastrophe treaty, the catastrophe treaty that covers events outside the United States, the commercial property per risk treaty and the supplemental catastrophe reinsurance were lower than the rates for the expiring treaties. The costs related to the reinsurance purchased through the issuance of the catastrophe bond in March 2014 were also lower than those related to the expiring bond. We therefore expect that the overall cost of our property reinsurance program will be lower in 2014 than in 2013.

Page 30

Profitability

The combined loss and expense ratio (or combined ratio), expressed as a percentage, is the key measure of underwriting profitability traditionally used in the property and casualty insurance business. Management evaluates the performance of our underwriting operations and of each of our business units using, among other measures, the combined loss and expense ratio calculated in accordance with U.S. statutory accounting principles. It is the sum of the ratio of losses and loss expenses to premiums earned (loss ratio) and the ratio of statutory underwriting expenses to premiums written (expense ratio) after reducing both premium amounts by dividends to policyholders. When the combined ratio is under 100%, underwriting results are generally considered profitable; when the combined ratio is over 100%, underwriting results are generally considered unprofitable.

Statutory accounting principles applicable to U.S. property and casualty insurance companies differ in certain respects from generally accepted accounting principles in the United States (GAAP). Under statutory accounting principles, policy acquisition and other underwriting expenses are recognized immediately, not at the time premiums are earned. Management uses underwriting results determined in accordance with GAAP, among other measures, to assess the overall performance of our underwriting operations. To convert statutory underwriting results to a GAAP basis, certain policy acquisition expenses are deferred and amortized over the period in which the related premiums are earned. Underwriting income determined in accordance with GAAP is defined as premiums earned less losses and loss expenses incurred and GAAP underwriting expenses incurred.

An accident year is the calendar year in which a loss occurs or, in the case of claims-made policies, the calendar year in which a loss is reported. The total losses and loss expenses incurred for a particular calendar year include current accident year losses and loss expenses as well as any increases or decreases to our estimates of losses and loss expenses that occurred in all prior accident years, which we refer to as prior year loss development.

Underwriting results were highly profitable in the first nine months of 2014 and 2013. Underwriting results were also highly profitable in the third quarter of both years. The combined loss and expense ratio for our overall property and casualty business was as follows:

	Periods Ended September 30			
	Nine Months		Third Quarter	
	2014	2013	2014	2013
Loss ratio	57.9%	54.1%	54.0%	53.0%
Expense ratio	31.7	32.3	31.8	32.7
Combined ratio	89.6%	86.4%	85.8%	85.7%

Table of Contents

Page 31

The loss ratio was higher in the first nine months of 2014 and slightly higher in the third quarter compared with the same periods of 2013. The higher loss ratio in the first nine months of 2014 compared with the same period of 2013 was due primarily to a higher current accident year loss ratio excluding catastrophes and, to a lesser extent, a lower amount of favorable prior year loss development and a higher impact of catastrophes. The slightly higher loss ratio in the third quarter of 2014 compared with the same period of 2013 was due primarily to a higher current accident year loss ratio excluding catastrophes and a lower amount of favorable prior year loss development, offset in part by a lower impact of catastrophes. In our personal insurance segment, the current accident year loss ratio excluding catastrophes was modestly higher in the first nine months of 2014 and slightly higher in the third quarter compared with the same periods of 2013. The higher current accident year loss ratio excluding catastrophes in our personal insurance segment in the first nine months of 2014 was driven by an increase in both fire losses and non-catastrophe weather-related losses in our homeowners business compared with the 2013 period. The current accident year loss ratio excluding catastrophes for our commercial insurance segment was slightly higher in the first nine months and third quarter of 2014 compared with the same periods of 2013. The current accident year loss ratio for our specialty insurance segment was similar in the first nine months and third quarter of 2014 and 2013. The current accident year loss ratio for that segment in the first nine months of 2014 was adversely impacted by one large surety loss in the first quarter.

Our underwriting profitability in any given period will be affected by the impact of catastrophes in that period. We define a catastrophe as an event that is estimated to cause \$25 million or more in industry-wide insured property losses and affects a significant number of policyholders and insurers.

The net impact of catastrophes in the first nine months of 2014 was \$419 million, which represented 4.6 percentage points of the combined ratio, compared with \$347 million or 3.9 percentage points in the same period of 2013. The net impact of catastrophes in the third quarter of 2014 was \$74 million, which represented 2.4 percentage points of the combined ratio, compared with \$92 million or 3.0 percentage points in the same period of 2013. A significant portion of the catastrophe losses in the first nine months of 2014 related to weather-related events in the United States, including a severe winter freeze event in the first quarter which affected a widespread area of the United States. A significant portion of the catastrophe losses in the first nine months of 2013 related to several severe storms in the central United States, primarily in the second and third quarters, as well as flooding in southern Alberta, Canada, in the second quarter and flooding in Ontario, Canada, in the third quarter.

Table of Contents

Page 32

The individually significant events that contributed to catastrophe costs, including losses and any related reinsurance reinstatement premiums, during the first nine months of 2014 and 2013 were as follows:

				(in millions)	
2014					
Winter freeze	17 states in the United States	January 2014		\$	121
Other events					298
Total				\$	419
2013					
Flooding	Alberta, Canada	June 2013		\$	85
Other events					262
Total				\$	347

The net impact of catastrophes in the first nine months of 2014 reflected no prior year loss development. This compares to favorable prior year loss development of \$18 million in the same period of 2013. The net impact of catastrophes in the third quarter of 2014 reflected unfavorable prior year loss development of \$8 million compared with favorable prior year loss development of \$12 million in the same period of 2013.

The expense ratio was lower in the first nine months and third quarter of 2014 compared with the same periods of 2013. The lower ratio in the 2014 periods was due primarily to growth in net premiums written and a slight decrease in overhead expenses offset in part by a slight increase in commission expense.

Review of Underwriting Results by Business Unit*Personal Insurance*

Net premiums written in our personal insurance segment, which represented 36% of our premiums written in the first nine months of 2014, increased by 4% in the first nine months of 2014 and 6% in the third quarter compared with the same periods of 2013. Net premiums written for the classes of business within the personal insurance segment were as follows:

	Nine Months Ended September 30				Quarter Ended September 30		
	2014	2013	% Incr.		2014	2013	% Incr.
	<i>(in millions)</i>				<i>(in millions)</i>		
Automobile	\$ 558	\$ 556	%	\$	190	\$ 185	3%
Homeowners	2,093	2,011	4		735	707	4
Other	738	680	9		242	214	13
Total personal	\$ 3,389	\$ 3,247	4	\$	1,167	\$ 1,106	6

Table of Contents

Page 33

The increase in net premiums written in our personal insurance business in the first nine months and third quarter of 2014 compared with the same periods of 2013 was driven by growth in the United States. Premium growth occurred in all classes of our personal insurance business in the first nine months and third quarter of 2014 in the United States. Net premiums written outside the United States decreased in the first nine months of 2014 and were flat in the third quarter, due to the negative impact of foreign currency translation. The overall growth in our personal insurance business was attributable to higher rates upon renewal, higher insured exposures, strong retention of existing business, and new business. Net premiums written for our personal automobile business were flat in the first nine months of 2014 and increased modestly in the third quarter compared with the same periods of 2013. In both 2014 periods, growth occurred in the United States. Net premiums written outside the United States for our personal automobile business declined in the first nine months and third quarter of 2014, due to the negative impact of foreign currency translation. Personal automobile premiums written outside the United States represent about 40% of our annual worldwide personal automobile business, with more than half written in Brazil. Premiums for our homeowners business increased modestly in the first nine months and third quarter of 2014 compared with the same periods of 2013, driven by growth in the United States, reflecting higher renewal rates, increases in the values insured on existing policies, strong retention of existing business, as well as new business. Homeowners premiums outside the United States decreased slightly in the first nine months of 2014 and increased slightly in the third quarter compared with the same periods of 2013. In both periods, homeowners premium growth outside the United States was adversely impacted by foreign currency translation. Premiums for our other personal business, which includes accident and health, excess liability and yacht coverages, increased in the first nine months and third quarter of 2014 compared with the same periods of 2013, driven by significant growth in the United States. Premiums for our other personal business written outside the United States decreased modestly in the first nine months of 2014 and increased modestly in the third quarter compared with the same periods of 2013. In both periods, premium growth outside the United States reflected the negative impact of foreign currency translation. Premiums for our accident and health business increased significantly in the first nine months and third quarter of 2014 compared with the same periods of 2013. The increase was more significant in the third quarter, driven by growth in the United States. Accident and health premiums written outside the United States decreased modestly in the first nine months of 2014 and increased modestly in the third quarter. Premiums for our excess liability business, most of which is written in the United States, increased significantly in the first nine months and third quarter of 2014 compared with the same periods of 2013.

Table of Contents

Page 34

Our personal insurance business produced profitable underwriting results in the first nine months of 2014 compared with highly profitable results in the same period of 2013. Results for our personal insurance business were highly profitable in the third quarter of both years, but more so in 2014. The combined loss and expense ratios for the classes of business within the personal insurance segment were as follows:

	Periods Ended September 30			
	Nine Months		Third Quarter	
	2014	2013	2014	2013
Automobile	97.4%	95.1%	95.2%	95.8%
Homeowners	92.2	84.4	80.3	84.3
Other	93.7	94.0	95.4	94.9
Total personal	93.3	88.2	85.9	88.3

The less profitable underwriting results for our personal insurance business in the first nine months of 2014 compared with the same period of 2013 were driven mainly by deterioration in the results in our homeowners business, due to a higher impact of fire losses and non-catastrophe weather-related losses. The more profitable results for our personal insurance business in the third quarter of 2014 compared with the same period of 2013 were driven mainly by more profitable results in our homeowners business, due primarily to a lower impact of catastrophes. The impact of catastrophes represented 7.3 percentage points of the combined ratio for our personal insurance business in the first nine months of 2014 and 3.5 percentage points in the third quarter compared with 7.9 and 7.0 percentage points, respectively, in the same periods of 2013.

Our personal automobile business produced profitable results in the first nine months of 2014 and 2013, but more so in the 2013 period. The more profitable results in the first nine months of 2013 were driven mainly by more profitable results in the United States, which benefited from a more significant amount of favorable prior year loss development compared with the 2014 period. Results outside the United States were near breakeven in the first nine months of 2014 and 2013. Personal automobile results in the third quarter of both years were similarly profitable and benefited from a modest amount of favorable prior year loss development. Results outside the United States were modestly profitable in the third quarter of 2014 compared to slightly unprofitable results in the same period of 2013.

Homeowners results were profitable in the first nine months of 2014 compared with highly profitable results in the same period of 2013. Results for this business were highly profitable in the third quarter of both years, but more so in 2014. The less profitable results in the first nine months of 2014 were due primarily to a higher current accident year loss ratio excluding catastrophes, driven by an increase in fire losses and non-catastrophe weather-related losses. The more profitable results in the third quarter of 2014 were due primarily to a lower impact of catastrophes. Catastrophe losses represented 11.8 percentage points of the combined ratio for this class in the first nine months of 2014 and 5.6 percentage points in the third quarter compared with 12.5 and 11.1 percentage points, respectively, in the same periods of 2013.

Table of Contents

Page 35

Our other personal business produced profitable results in the first nine months and third quarter of 2014 and 2013. In the United States, results for our other personal business were highly profitable in the first nine months and third quarter of both years. Results for this business outside the United States were unprofitable in the first nine months and third quarter of both years, but more so in the 2014 periods. Our accident and health business produced slightly unprofitable results in the first nine months of 2014 compared with slightly profitable results in the same period of 2013. Results for this business were unprofitable in the third quarter of 2014 compared with slightly unprofitable results in the same period of 2013. Results for our personal excess liability business were highly profitable in the first nine months and third quarter of both years. Results for this business in each period benefited from favorable prior year loss development. Our yacht business produced highly profitable results in the first nine months and third quarter of both years.

Commercial Insurance

Net premiums written in our commercial insurance segment, which represented 43% of our premiums written in the first nine months of 2014, increased by 2% in the first nine months of 2014 and 4% in the third quarter compared with the same periods of 2013. Net premiums written for the classes of business within the commercial insurance segment were as follows:

	Nine Months Ended September 30			Quarter Ended September 30			% Incr. (Decr.)
	2014 (in millions)	2013	% Incr.	2014 (in millions)	2013		
Multiple peril	\$ 837	\$ 834	%	\$ 291	\$ 285		2%
Casualty	1,251	1,240	1	401	390		3
Workers compensation	874	846	3	279	281		(1)
Property and marine	1,122	1,094	3	330	299		10
Total commercial	\$ 4,084	\$ 4,014	2	\$ 1,301	\$ 1,255		4

Net premiums written in our commercial insurance business increased modestly in the first nine months and third quarter of 2014 in the United States compared with the same periods of 2013. Net premiums written outside the United States increased modestly in the first nine months of 2014 and increased significantly in the third quarter. Overall, premium growth in our commercial insurance business in the first nine months and third quarter of 2014 was constrained by lower renewal exposures and our continued efforts to secure adequate rates on renewal and new business in a market that continued to be competitive. Growth within our commercial insurance business in the first nine months of 2014 was driven by the workers compensation and property and marine classes, reflecting high retention, new business, and renewal rate increases. In the first nine months of 2014, premiums written for the other classes within our commercial insurance business increased slightly. In the third quarter of 2014, significant growth occurred in the property and marine class, due primarily to new business as well as strong retention and lower ceded reinsurance premiums. Growth occurred both inside and outside the United States. Modest growth occurred in the multiple peril and casualty classes in

Table of Contents

Page 36

the third quarter of 2014 while premiums written in the workers' compensation class decreased slightly. The positive overall rate environment experienced in recent years for commercial insurance in the United States continued in the first nine months of 2014. For our commercial insurance business overall, average renewal rates in the United States increased modestly in the first nine months and third quarter of 2014 compared with expiring rates, with increases occurring in each class. Overall, average renewal rates outside the United States increased slightly in the first nine months and third quarter of 2014. Retention levels of our existing policyholders remained strong and were modestly higher, both inside and outside the United States, in the first nine months and third quarter of 2014 compared with the same periods of 2013. In the first nine months and third quarter of 2014, the average renewal exposure was down slightly both inside and outside the United States compared with the same periods of 2013. The amount of new business, both inside and outside the United States, was higher in the first nine months of 2014 compared with the same period of 2013, as a result of more opportunities to write business at appropriate rates. The amount of new business was also higher in the third quarter of 2014 outside the United States, but remained flat in the United States compared with the same period of 2013.

Our commercial insurance business produced highly profitable underwriting results in the first nine months and third quarter of 2014 and 2013, but more so in 2013. The combined loss and expense ratios for the classes of business within the commercial insurance segment were as follows:

	Periods Ended September 30			
	Nine Months		Third Quarter	
	2014	2013	2014	2013
Multiple peril	88.4%	86.6%	81.9%	82.0%
Casualty	90.0	95.4	95.3	98.5
Workers' compensation	84.1	88.9	83.9	91.2
Property and marine	97.3	71.8	93.3	69.2
Total commercial	90.4	85.6	89.5	85.2

The less profitable results in our commercial insurance business in the first nine months and third quarter of 2014 compared with the same periods of 2013 were due to a lower amount of favorable prior year loss development, a higher impact of catastrophes and a slightly higher current accident year loss ratio excluding catastrophes. The impact of catastrophes represented 4.5 percentage points of the combined ratio for our commercial insurance business in the first nine months of 2014 and 2.6 percentage points in the third quarter compared with 2.6 and 1.4 percentage points, respectively, in the same periods of 2013. The current accident year loss ratio excluding catastrophes in the first nine months of 2014 was adversely affected by a higher impact of large fire losses and non-catastrophe weather-related losses primarily in our property and marine business. Results for our commercial insurance business in all periods benefited from significant favorable prior year loss development and our disciplined risk selection in recent years.

Table of Contents

Page 37

Multiple peril results were highly profitable in the first nine months of 2014 and 2013, but more so in 2013. Multiple peril results were also highly profitable in the third quarter of both years. Results in the property component of this business in the first nine months of both years were highly profitable, but modestly less so in 2014 due primarily to a higher impact of catastrophes. Results for the property component were also highly profitable in the third quarter of both years. In the multiple peril class overall, the impact of catastrophes represented 5.9 percentage points of the combined ratio in the first nine months of 2014 and 3.2 percentage points in the third quarter compared with 4.4 and 3.2 percentage points, respectively, in the same periods of 2013. The liability component of this business produced highly profitable results in the first nine months of 2014 compared with profitable results in the same period of 2013. Results for the liability component of this business were highly profitable in the third quarter of both years.

Results for our casualty business were profitable in the first nine months and third quarter of 2014 and 2013, but more so in the 2014 periods. Results for the primary liability component of this business were slightly profitable in the first nine months of 2014 and near breakeven in the third quarter compared with unprofitable results in the same periods of 2013. Results for this component in the 2013 periods reflected a high volume of large reported losses, many of which related to prior accident years. The automobile component of our casualty business produced breakeven results in the first nine months of 2014 compared with modestly profitable results in the same period of 2013. Results for this component were modestly profitable in the third quarter of 2014 compared with slightly unprofitable results in the same period of 2013. Results for the excess liability component of our casualty business were highly profitable in the first nine months and third quarter of both 2014 and 2013. Results for this component in all periods benefited from substantial favorable prior year loss development. Overall results for our casualty business were adversely affected by incurred losses related to asbestos and toxic waste claims in the first nine months and third quarter of 2014 and 2013. Our analysis of these exposures resulted in increases in the estimate of our ultimate liabilities. Such losses represented 2.9 and 3.8 percentage points of the combined ratio for this class in the first nine months of 2014 and 2013, respectively, and 5.9 and 3.4 percentage points in the third quarter of 2014 and 2013, respectively.

Workers' compensation results were highly profitable in the first nine months of both 2014 and 2013, but more so in 2014. Results were also highly profitable in the third quarter of 2014 compared with profitable results in the same period of 2013. The more profitable results in the 2014 periods were mainly due to improved current accident year results compared with the same periods of 2013. Results in each period reflected favorable prior year loss development, but modestly more so in the 2014 periods. Results also reflected improved pricing and our disciplined risk selection during the past several years.

Table of Contents

Page 38

Property and marine results were profitable in the first nine months and third quarter of 2014 compared with highly profitable results in the same periods of 2013. The less profitable results in the first nine months of 2014 reflected a significantly higher current accident year loss ratio excluding catastrophes, due in large part to a higher impact of large fire losses and non-catastrophe weather-related losses. In addition, results in the first nine months of 2013 benefited from a significant amount of favorable prior year loss development and a lower impact of catastrophes. The less profitable results in the third quarter of 2014 reflected a higher current accident year loss ratio excluding catastrophes. Results in the third quarter of 2013 also benefited from a significant amount of favorable prior year loss development and a lower impact of catastrophes. The impact of catastrophes represented 11.4 percentage points of the combined ratio in the first nine months of 2014 and 6.6 percentage points in the third quarter compared with 5.2 and 2.2 percentage points, respectively, in the same periods of 2013.

Specialty Insurance

Net premiums written in our specialty insurance segment, which represented 21% of our premiums written in the first nine months of 2014, increased by 3% in the first nine months of 2014 and 5% in the third quarter compared with the same periods of 2013. Net premiums written for the classes of business within the specialty insurance segment were as follows:

	Nine Months Ended September 30		% Incr.	Quarter Ended September 30		% Incr.
	2014	2013	(Decr.)	2014	2013	(Decr.)
	(in millions)			(in millions)		
Professional liability	\$ 1,753	\$ 1,692	4%	\$ 629	\$ 594	6%
Surety	227	236	(4)	72	76	(5)
Total specialty	\$ 1,980	\$ 1,928	3	\$ 701	\$ 670	5

Net premiums written for our professional liability business increased by 4% in the first nine months of 2014 and 6% in the third quarter compared with the same periods of 2013. Such net premiums written in the United States were higher in the first nine months and third quarter of 2014 compared with the same periods of 2013. Net premiums written outside the United States were slightly higher in the first nine months and third quarter of 2014 compared with the same periods of 2013. Professional liability premium growth in the first nine months of 2014 included the modestly positive effect of our decision not to renew a reinsurance program, which expired July 1, 2013, that provided coverage for a portion of our professional liability business. Premium growth in our professional liability business continued to reflect our focus on profitability in the pricing of renewal policies and new business, in what remains a competitive marketplace. The overall rate environment for professional liability business remained positive, particularly in the United States and we continued to pursue rate increases. Retention levels for the classes within our professional liability business remained strong. Retention levels in the United States were modestly higher in the first nine months and third quarter of 2014 compared with those in the same periods of 2013. The retention levels outside

Table of Contents

Page 39

the United States were substantially unchanged in the first nine months of 2014 and were modestly higher in the third quarter. New business volume was modestly higher in the first nine months and third quarter of 2014 compared with the same periods of 2013, with increases occurring both inside and outside the United States. The new business volume in the 2014 periods reflected opportunities to write suitably-priced business in select classes due to the positive pricing trends in the market over the last few years. Average renewal rates for our professional liability business in the United States were higher in the first nine months and third quarter of 2014 compared with expiring rates, with increases occurring in most classes of this business. Overall, average renewal rates outside the United States were up slightly in the first nine months and third quarter of 2014. The amounts of insured exposures in the United States were down slightly in the first nine months of 2014 and about the same in the third quarter compared with the same periods of 2013. Such amounts outside the United States were down slightly in both periods of 2014.

The decrease in net premiums written in our surety business in the first nine months of 2014 compared with the same period of 2013 was driven by a decline in premiums written outside the United States, particularly in Latin America, partly due to the negative impact of foreign currency translation. Premiums written in the United States for our surety business increased slightly in the first nine months of 2014. The decrease in net premiums written in the third quarter of 2014 compared with the same period of 2013 was driven by a decline in premiums written in the United States. Premiums written outside the United States for our surety business were flat in the third quarter of 2014 compared with the same period of 2013. The timing of contract awards to our customers can vary and, as a result, premium growth in our surety business varies from period to period.

Our specialty insurance business produced highly profitable underwriting results in the first nine months and third quarter of 2014 and 2013. The combined loss and expense ratios for the classes of business within the specialty insurance segment were as follows:

	Periods Ended September 30			
	Nine Months		Third Quarter	
	2014	2013	2014	2013
Professional liability	82.9%	90.6%	81.3%	87.6%
Surety	73.3	44.9	54.8	41.3
Total specialty	81.8	85.2	78.3	82.3

Our professional liability business produced highly profitable results in the first nine months and third quarter of 2014 and 2013, but more so in the 2014 periods. The more profitable results in the 2014 periods were due to a higher amount of favorable prior year loss development and improved current accident year results compared with the same periods of 2013.

Table of Contents

Page 40

Results for the directors and officers liability class were highly profitable in the first nine months and third quarter of 2014 and 2013, but more so in the 2014 periods. Results in all periods benefited from favorable prior year loss development. Results for the fidelity class were profitable in the first nine months of 2014 compared with slightly profitable results in the same period of 2013. Results for the fidelity class reflected unfavorable prior year loss development in the first nine months of both years, but more so in 2013. Results for this class were profitable in the third quarter of both years. Results for the employment practices liability class were unprofitable in the first nine months and third quarter of 2014 and 2013, but less so in the 2014 periods. Results for this class in the first nine months of 2013 were adversely affected by unfavorable prior year loss development. Results for the errors and omissions liability class were unprofitable in the first nine months of 2014 and 2013, but less so in 2014 due to improved current accident year results as well as a lower amount of unfavorable prior year loss development. Results for this class were profitable in the third quarter of 2014 compared with unprofitable results in the same period of 2013. Results in the third quarter of 2014 reflected a modest amount of favorable prior year loss development, whereas results in the same period of 2013 reflected unfavorable prior year loss development. Results for the fiduciary liability class were highly profitable in the first nine months and third quarter of both 2014 and 2013. Results for this class reflected favorable prior year loss development in all periods.

Our surety business produced highly profitable results in the first nine months and third quarter of 2014 and 2013. Results in the first nine months of 2014 were less profitable than the same period of 2013 due primarily to one large loss outside the United States in the first quarter. Our surety business tends to be characterized by losses that are infrequent but have the potential to be highly severe.

Reinsurance Assumed

Net premiums written in our runoff reinsurance assumed business were not significant in the first nine months and third quarter of 2014 or 2013. This business produced breakeven results in the first nine months of 2014 compared with profitable results in the same period of 2013. Results in the first nine months of 2013 benefited from favorable prior year loss development. Results for this business were breakeven in the third quarter of both years.

Catastrophe Risk Management

Our property and casualty subsidiaries have exposure to losses caused by natural perils such as hurricanes and other windstorms, earthquakes, severe winter weather and brush fires as well as from man-made catastrophic events such as terrorism. The frequency and severity of catastrophes are inherently unpredictable.

Table of Contents

Page 41

The extent of losses from a catastrophe is a function of both the total amount of insured exposure in an area affected by the event and the severity of the event. We regularly assess our concentrations of risk in catastrophe exposed areas globally and have strategies and underwriting standards to manage these exposures through individual risk selection, subject to regulatory constraints, and through the purchase of catastrophe reinsurance coverage. We use catastrophe modeling and a risk concentration management tool to monitor and control our accumulations of potential losses in catastrophe exposed areas in the United States, such as California and the gulf and east coasts, as well as in catastrophe exposed areas in other countries. The information provided by the catastrophe modeling and the risk concentration management tool has resulted in our non-renewing or reducing our exposure on some accounts and refraining from writing others.

Catastrophe modeling generally relies on multiple inputs based on experience, science, engineering and history, and the selection of those inputs requires a significant amount of judgment. The modeling results may also fail to account for risks that are outside the range of normal probability or are otherwise unforeseen. Because of this, actual results may differ materially from those derived from our modeling exercises.

We also continue to actively explore and analyze credible scientific evidence, including the potential impact of global climate change, that may affect our ability to manage our exposure under the insurance policies we issue as well as the impact that laws and regulations intended to combat climate change may have on us.

Despite our efforts to manage our catastrophe exposure, the occurrence of one or more severe catastrophic events could have a material effect on the Corporation's results of operations, financial condition or liquidity.

Table of Contents

Page 42

Loss Reserves

Unpaid losses and loss expenses, also referred to as loss reserves, are the largest liability of our property and casualty subsidiaries.

Our loss reserves include case estimates for claims that have been reported and estimates for claims that have been incurred but not reported at the balance sheet date as well as estimates of the expenses associated with processing and settling all reported and unreported claims, less estimates of anticipated salvage and subrogation recoveries. Estimates are based upon past loss experience modified for current trends as well as prevailing economic, legal and social conditions. Our loss reserves are not discounted to present value.

We regularly review our loss reserves using a variety of actuarial techniques. We update the reserve estimates as historical loss experience develops, additional claims are reported and/or settled and new information becomes available. Any changes in estimates are reflected in operating results in the period in which the estimates are changed.

Incurred but not reported (IBNR) reserve estimates are generally calculated by first projecting the ultimate cost of all claims that have occurred and then subtracting reported losses and loss expenses. Reported losses include cumulative paid losses and loss expenses plus case reserves. The IBNR reserve includes a provision for claims that have occurred but have not yet been reported to us, some of which are not yet known to the insured, as well as a provision for future development on reported claims. A relatively large proportion of our net loss reserves, particularly for long tail liability classes, are reserves for IBNR losses. In fact, about 75% of our aggregate net loss reserves at September 30, 2014 were for IBNR losses.

Table of Contents

Page 43

Our gross case and IBNR loss reserves and related reinsurance recoverable by class of business were as follows:

	Gross Loss Reserves			Reinsurance	Net

Table of Contents

Page 44

Loss reserves, net of reinsurance recoverable, increased by \$45 million during the first nine months of 2014. Loss reserves related to our insurance business increased by \$76 million during the first nine months of 2014, which reflected an increase of \$20 million related to catastrophe losses and a decrease of approximately \$106 million related to the effect of foreign currency translation due to the stronger U.S. dollar at September 30, 2014 compared with December 31, 2013. Loss reserves related to our reinsurance assumed business, which is in runoff, decreased by \$31 million.

The increase in our homeowners gross loss reserves during the first nine months of 2014 was driven by fire losses and non-catastrophe weather-related losses. The decrease in gross loss reserves in the professional liability classes was mainly due to lower case reserves as a result of paid claim activity during the first nine months of 2014.

In establishing the loss reserves of our property and casualty subsidiaries, we consider facts currently known and the present state of the law and coverage litigation. Based on all information currently available, we believe that the aggregate loss reserves at September 30, 2014 were adequate to cover claims for losses that had occurred as of that date, including both those known to us and those yet to be reported. However, as discussed in Item 7 of our Annual Report on Form 10-K for the year ended December 31, 2013, there are significant uncertainties inherent in the loss reserving process. It is therefore possible that management's estimate of the ultimate liability for losses that had occurred as of September 30, 2014 may change, which could have a material effect on the Corporation's results of operations and financial condition.

Changes in loss reserve estimates are unavoidable because such estimates are subject to the outcome of future events. Loss trends vary and time is required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development or reserve releases.

We estimate that we experienced overall favorable prior year development of about \$480 million during the first nine months of 2014 and \$155 million in the third quarter compared with favorable prior year development of about \$595 million and \$190 million, respectively, in the same periods of 2013, on loss reserves established as of the respective previous year end.

The favorable development in the first nine months of 2014 was primarily in the professional liability classes due to favorable loss experience related mainly to accident years 2010 and prior, and in the commercial liability classes due to favorable loss experience related mainly to accident years 2008 through 2012. The favorable development in the first nine months of 2013 was primarily in the commercial property classes, partly due to lower than expected severity primarily in the 2012 accident year and, to a lesser extent, in the commercial liability classes due to favorable loss experience related mainly to accident years 2010 and prior, and in the professional liability classes due to favorable loss experience related mainly to accident years 2008 and prior.

Table of Contents

Page 45

Investment Results

Property and casualty investment income before taxes decreased by 4% in both the first nine months and third quarter of 2014 compared with the same periods of 2013. The decrease was due to a decline in the average yield on our property and casualty subsidiaries' investment portfolio. The decrease in the average yield on the investment portfolio for the first nine months and third quarter of 2014 compared with the same periods of 2013 resulted from lower reinvestment yields on securities that we purchased to replace fixed maturities that matured, were redeemed by the issuer or were sold since the third quarter of 2013. For the first nine months and third quarter of 2014, the impact of the decline in average yield was partially offset by the impact of a slight increase in our average invested assets. Our property and casualty subsidiaries held a slightly higher amount of average invested assets in the first nine months and third quarter of 2014 compared with the same periods of 2013. While the property and casualty subsidiaries generated substantial operating cash flows in the last three months of 2013 and the first nine months of 2014, average invested assets were also impacted by substantial dividend distributions made by the property and casualty subsidiaries to Chubb during the second half of 2013 and the first half of 2014.

The effective tax rate on our investment income was 18.1% in the first nine months of 2014 compared with 18.0% in the same period of 2013. The effective tax rate fluctuates as the proportion of tax exempt investment income relative to total investment income changes from period to period.

On an after-tax basis, property and casualty investment income decreased by 4% in both the first nine months and the third quarter of 2014 compared with the same periods of 2013. The after-tax annualized yield on our property and casualty subsidiaries' investment portfolio was 2.76% and 2.88% in the first nine months of 2014 and 2013, respectively.

We expect that property and casualty investment income after taxes will decline for the full year 2014. This expected decline reflects the actual results for the first nine months of 2014 as well as the expected effect of having invested funds from securities that matured in 2013 and 2014 in securities with yields lower than the yields on the maturing securities, and the expectation that this pattern will continue during the remainder of 2014. The expected decline assumes that the average yield on fixed maturity securities available in the market and the average foreign currency to U.S. dollar exchange rates for the last three months of 2014 are both similar to September 30, 2014 levels and that average invested assets in 2014 will be slightly higher than 2013, based on our expectations of cash flows during the year.

Other Income and Charges

Other income and charges, which includes miscellaneous income and expenses of the property and casualty subsidiaries, was not significant in the first nine months of 2014 and 2013.

Table of Contents

Page 46

Corporate and Other

Corporate and other comprises investment income earned on corporate invested assets, interest expense and other expenses not allocated to our operating subsidiaries and the results of our non-insurance subsidiaries.

Corporate and other produced a loss before taxes of \$177 million in the first nine months of 2014 compared with a loss of \$182 million for the same period of 2013.

Realized Investment Gains and Losses

Net realized investment gains and losses were as follows:

	Periods Ended September 30			
	Nine Months		Third Quarter	
	2014	2013	2014	2013
	<i>(in millions)</i>			
Net realized gains (losses)				
Fixed maturities	\$ 71	\$ 12	\$ 22	\$ (5)
Equity securities	132	178	43	4
Other invested assets	153	156	45	23
	356	346	110	22
Other-than-temporary impairment losses				
Fixed maturities	(4)	(2)		(2)
Equity securities	(1)	(9)		(2)
	(5)	(11)		(4)
Realized investment gains before tax	\$ 351	\$ 335	\$ 110	\$ 18
Realized investment gains after tax	\$ 228	\$ 218	\$ 72	\$ 12

In the first nine months of 2013, the net realized gains of equity securities and other invested assets included \$74 million and \$10 million, respectively, related to the exchange of our holdings of common stock and warrants of Alterra Capital Holdings Limited for common stock of Markel Corporation and cash as a result of a business combination that took place during the second quarter of 2013.

The net realized gains and losses of other invested assets primarily include the aggregate of realized gain distributions to us from the limited partnerships in which we have an interest and changes in our equity in the net assets of those partnerships based on valuations provided to us by the manager of each partnership. Due to the timing of our receipt of valuation data from the investment managers, the value of these investments and any related realized gains and losses are generally reported on a one quarter lag.

Table of Contents

Page 47

The net realized gains of the limited partnerships reported in the first nine months of 2014 primarily reflected the positive performance of the global equity and high yield investment markets in the first six months of 2014 and the fourth quarter of 2013. The net realized gains of the limited partnerships reported in the first nine months of 2013 primarily reflected the positive performance of the global equity and high yield investment markets in the first quarter of 2013 and the fourth quarter of 2012.

We regularly review invested assets that have a fair value less than cost to determine if an other-than-temporary decline in value has occurred. We have a monitoring process overseen by a committee of investment and accounting professionals that is responsible for identifying those securities to be specifically evaluated for a potential other-than-temporary impairment.

The determination of whether a decline in value of any investment is temporary or other than temporary requires the judgment of management. The assessment of other-than-temporary impairment of fixed maturities and equity securities is based on both quantitative criteria and qualitative information. A number of factors are considered including, but not limited to, the length of time and the extent to which the fair value has been less than the cost, the financial condition and near term prospects of the issuer, whether the issuer is current on contractually obligated interest and principal payments, general market conditions and industry or sector specific factors. The decision to recognize a decline in the value of a security carried at fair value as other than temporary rather than temporary has no impact on shareholders' equity.

In determining whether fixed maturities are other than temporarily impaired, we are required to recognize an other-than-temporary impairment loss when we conclude that we have the intent to sell or it is more likely than not that we will be required to sell an impaired fixed maturity before the security recovers to its amortized cost value or it is likely we will not recover the entire amortized cost value of an impaired security. If we have the intent to sell or it is more likely than not that we will be required to sell an impaired fixed maturity before the security recovers to its amortized cost value, the security is written down to fair value and the entire amount of the writedown is included in net income as a realized investment loss. For all other impaired fixed maturities, when the impairment is determined to be other than temporary, the impairment loss is separated into the amount representing the credit loss and the amount representing the loss related to all other factors. The amount of the impairment loss that represents the credit loss is included in net income as a realized investment loss and the amount of the impairment loss that relates to all other factors is included in other comprehensive income.

In determining whether equity securities are other than temporarily impaired, we consider our intent and ability to hold a security for a period of time sufficient to allow us to recover our cost. If a decline in the fair value of an equity security is deemed to be other than temporary, the security is written down to fair value and the amount of the writedown is included in net income as a realized investment loss.

Capital Resources and Liquidity

Capital resources and liquidity represent a company's overall financial strength and its ability to generate cash flows, borrow funds at competitive rates and raise new capital to meet operating and growth needs.

Table of Contents

Page 48

Capital Resources

Capital resources provide protection for policyholders, furnish the financial strength to support the business of underwriting insurance risks and facilitate continued business growth. At September 30, 2014, the Corporation had shareholders' equity of \$16.5 billion and total debt of \$3.3 billion.

Management regularly monitors the Corporation's capital resources. In connection with our long term capital strategy, Chubb from time to time contributes capital to its property and casualty subsidiaries. In addition, in order to satisfy capital needs as a result of any rating agency capital adequacy or other future rating issues, or in the event we were to need additional capital to make strategic investments in light of market opportunities, we may take a variety of actions, which could include the issuance of additional debt and/or equity securities. We believe that our strong financial position and current debt level provide us with the flexibility and capacity to obtain funds externally through debt or equity financings on both a short term and long term basis.

In January 2013, the Board of Directors authorized the repurchase of up to \$1.3 billion of Chubb's common stock. Repurchases under this authorization were completed in January 2014. On January 30, 2014, the Board of Directors authorized the repurchase of up to \$1.5 billion of Chubb's common stock. During the first nine months of 2014, under these two authorizations we repurchased 13,448,081 shares of Chubb's common stock in open market transactions at a cost of \$1,209 million. As of September 30, 2014, approximately \$399 million remained under the January 2014 authorization. This authorization has no expiration date. We expect to complete the repurchase of shares under this authorization by the end of January 2015, subject to market conditions and other factors.

Ratings

Chubb and its property and casualty insurance subsidiaries are rated by major rating agencies. These ratings reflect the rating agency's opinion of our financial strength, operating performance, strategic position and ability to meet our obligations to policyholders.

Credit ratings assess a company's ability to make timely payments of interest and principal on its debt. Financial strength ratings assess an insurer's ability to meet its financial obligations to policyholders.

Ratings are an important factor in establishing our competitive position in the insurance markets. There can be no assurance that our ratings will continue for any given period of time or that they will not be changed.

It is possible that one or more of the rating agencies may raise or lower our existing ratings in the future. If our credit ratings were downgraded, we might incur higher borrowing costs and might have more limited means to access capital. A downgrade in our financial strength ratings could adversely affect the competitive position of our insurance operations, including a possible reduction in demand for our products in certain markets.

Table of Contents

Page 49

Liquidity

Liquidity is a measure of a company's ability to generate sufficient cash flows to meet the short and long term cash requirements of its business operations.

The Corporation's liquidity requirements in the past have generally been met by funds from operations and we expect that funds from operations will continue to be sufficient to meet such requirements in the future. Liquidity requirements could also be met by funds received upon the maturity or sale of marketable securities in our investment portfolio. The Corporation also has the ability to borrow under its \$500 million credit facility and we believe we could issue debt or equity securities.

Our property and casualty operations provide liquidity in that insurance premiums are generally received months or even years before losses are paid under the policies purchased by such premiums. Cash receipts from operations, consisting of insurance premiums and investment income, provide funds to pay losses, operating expenses and dividends to Chubb. Cash receipts in excess of required cash outflows can be used to build the investment portfolio, with the expectation of generating additional investment income in the future.

Our strong underwriting and investment results generated substantial positive operating cash flows in the first nine months of 2014 and 2013. The cash provided by the property and casualty subsidiaries' operating activities increased in the first nine months of 2014 compared with the same period of 2013 primarily as a result of lower tax payments and modestly higher premium collections. During the first nine months of 2014, the cash provided by the operating activities of the property and casualty subsidiaries exceeded the cash used for financing activities by the property and casualty subsidiaries (primarily the payment of dividends to Chubb) by approximately \$510 million. In the first nine months of 2014, dividends paid to Chubb by the property and casualty subsidiaries increased by \$457 million compared with the comparable period of 2013 reflecting in part a difference in the timing of the payment of subsidiary dividends in 2013 and those paid and anticipated in 2014. During the first nine months of 2013, the cash provided by the operating activities of the property and casualty subsidiaries exceeded the cash used for financing activities by the property and casualty subsidiaries (primarily the payment of dividends to Chubb) by approximately \$430 million.

Our property and casualty subsidiaries maintain substantial investments in highly liquid, short term marketable securities. Accordingly, we do not anticipate selling long term fixed maturity investments to meet any liquidity needs.

Chubb's liquidity requirements primarily include the payment of dividends to shareholders and interest and principal on debt obligations. The declaration and payment of future dividends to Chubb's shareholders will be at the discretion of Chubb's Board of Directors and will depend upon many factors, including our operating results, financial condition, capital requirements and any regulatory constraints.

Table of Contents

Page 50

As a holding company, Chubb's ability to continue to pay dividends to shareholders and to satisfy its debt obligations relies on the availability of liquid assets, which is dependent in large part on the dividend paying ability of its property and casualty subsidiaries. The timing and amount of dividends paid by the property and casualty subsidiaries to Chubb may vary from year to year. In the United States, our property and casualty subsidiaries are subject to laws and regulations in the jurisdictions in which they operate that restrict the amount and timing of dividends they may pay within twelve consecutive months without the prior approval of regulatory authorities. The restrictions are generally based on net income and on certain levels of policyholders' surplus as determined in accordance with statutory accounting practices. Dividends in excess of such thresholds are considered extraordinary and require prior regulatory approval.

During the first nine months of 2014, the property and casualty subsidiaries paid dividends of \$1.4 billion to Chubb. Whether any dividends the property and casualty subsidiaries may pay during the remainder of 2014 require regulatory approval will depend on the amount and timing of the dividend payments. As of September 30, 2014, the maximum aggregate dividend distribution that may be made by the subsidiaries to Chubb during the remainder of 2014 without prior regulatory approval was approximately \$600 million.

Invested Assets

The main objectives in managing our investment portfolios are to maximize after-tax investment income and total investment return while managing credit risk and interest rate risk in order to ensure that funds will be available to meet our insurance obligations. Investment strategies are developed based on many factors including underwriting results and our resulting tax position, regulatory requirements, fluctuations in interest rates and consideration of other market risks. Investment decisions are centrally managed by investment professionals based on guidelines established by management and approved by the boards of directors of Chubb and its respective operating companies.

Our investment portfolio primarily comprises high quality bonds, principally tax exempt securities, corporate bonds, mortgage-backed securities and U.S. Treasury securities, as well as foreign government and corporate bonds that support our operations outside the United States. The portfolio also includes equity securities, primarily publicly traded common stocks, and other invested assets, primarily private equity limited partnerships, all of which are held with the primary objective of capital appreciation.

Our objective is to achieve an appropriate mix of taxable and tax exempt securities in our portfolio to balance both investment and tax strategies. At September 30, 2014, 62% of our U.S. fixed maturity portfolio was invested in tax exempt securities. At September 30, 2014, about 70% of our tax exempt securities were rated Aa or better, with about 15% rated Aaa. The average rating of our tax exempt securities was Aa. While about 15% of our tax exempt securities were insured, the effect of insurance on the average credit rating of these securities was insignificant. The insured tax exempt securities in our portfolio have been selected based on the quality of the underlying credit and not the value of the credit insurance enhancement.

Page 51

At September 30, 2014, 11% of our taxable fixed maturity portfolio was invested in U.S. government and government agency and authority obligations other than mortgage-backed securities and had an average rating of Aaa. About 80% of the U.S. government and government agency and authority obligations other than mortgage-backed securities were U.S. Treasury securities with an average rating of Aaa and the remainder were taxable bonds issued by states, municipalities and political subdivisions within the United States with an average rating of Aa.

At September 30, 2014, 47% of our taxable fixed maturity portfolio consisted of corporate bonds that were issued by a diverse group of U.S. and foreign issuers and had an average rating of A. About 55% of our corporate bonds were issued by U.S. companies and about 45% were issued by foreign companies. Our foreign corporate bonds included \$60 million and \$13 million issued by companies, including banks, in Ireland and Spain, respectively. We held no bonds issued by companies in Greece, Italy or Portugal.

At September 30, 2014, 35% of our taxable fixed maturity portfolio was invested in foreign government and government agency obligations, which had an average rating of Aa. The foreign government and government agency obligations consisted of high quality securities, primarily issued by national governments and, to a lesser extent, government agencies, regional governments and supranational organizations. The five largest sovereign issuers within our portfolio were Canada, Germany, the United Kingdom, Australia and Brazil, which collectively accounted for about 75% of our total foreign government and government agency obligations. Another 7% of our total foreign government and government agency obligations were issued by supranational organizations. We held no sovereign securities issued by Portugal, Ireland, Italy, Greece or Spain. We did not hold any foreign government or government agency fixed maturities that have third party guarantees.

At September 30, 2014, 7% of our taxable fixed maturity portfolio was invested in mortgage-backed securities. About 95% of the mortgage-backed securities were rated Aaa. About half of the remaining 5% were below investment grade. Of the Aaa rated securities, 87% were call protected, commercial mortgage-backed securities (CMBS). All of our CMBS were senior securities with the highest level of credit support. The other 13% of the Aaa rated securities were residential mortgage-backed securities, consisting of government agency pass-through securities guaranteed by a government agency or a government sponsored enterprise and collateralized mortgage obligations backed by single family home mortgages.

The net unrealized appreciation before tax of our fixed maturities and equity securities carried at fair value was \$2.5 billion at September 30, 2014 compared with net unrealized appreciation before tax of \$1.9 billion at December 31, 2013. Such unrealized appreciation is reflected in accumulated other comprehensive income, net of applicable deferred income taxes.

During the first nine months of 2014, market yields on fixed maturity investments decreased resulting in an increase in the fair value of many of our fixed maturity investments.

Fair Values of Financial Instruments

Fair values of financial instruments are determined by management using valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. Fair values are generally measured using quoted prices in active markets for identical assets or liabilities or other inputs, such as quoted prices for similar assets or liabilities, that are observable, either directly or indirectly. In those instances where observable inputs are not available, fair values are measured using unobservable inputs for the asset or liability. Unobservable inputs reflect our own assumptions about the assumptions that market participants would use in pricing the asset or liability and are developed based on the best information available in the circumstances. Fair value estimates derived from unobservable inputs are affected by the assumptions used, including the discount rates and the estimated amounts and timing of future cash flows. The derived fair value estimates cannot be substantiated by comparison to independent markets and are not necessarily indicative of the amounts that would be realized in a current market exchange.

The fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels as follows:

Level 1 Unadjusted quoted prices in active markets for identical financial instruments.

Level 2 Other inputs that are observable for the financial instrument, either directly or indirectly.

Level 3 Significant unobservable inputs.

The methods and assumptions used to estimate the fair values of financial instruments are as follows:

The carrying value of short term investments approximates fair value due to the short maturities of these investments.

Fair values of fixed maturities are determined by management, utilizing prices obtained from a third party, nationally recognized pricing service or, in the case of securities for which prices are not provided by a pricing service, from third party brokers. For fixed maturities that have quoted prices in active markets, market quotations are provided. For fixed maturities that do not trade on a daily basis, the pricing service and brokers provide fair value estimates using a variety of inputs including, but not limited to, benchmark yields, reported trades, broker/dealer quotes, issuer spreads, bids, offers, reference data, prepayment rates and measures of volatility. Management reviews on an ongoing basis the reasonableness of the methodologies used by the relevant pricing service and brokers. In addition, management, using the prices received for the securities from the pricing service and brokers, determines the aggregate portfolio price performance and reviews it against applicable indices. If management believes that significant discrepancies exist, it will discuss these with the relevant pricing service or broker to resolve the discrepancies.

Fair values of equity securities are determined by management, utilizing quoted market prices.

Page 53

Fair values of long term debt issued by Chubb are determined by management, utilizing prices obtained from a third party, nationally recognized pricing service.

At September 30, 2014 and December 31, 2013, a pricing service provided fair value amounts for approximately 99% of our fixed maturities. The prices we obtain from a pricing service and brokers generally are non-binding, but are reflective of current market transactions in the applicable financial instruments.

At September 30, 2014 and December 31, 2013, we held an insignificant amount of financial instruments in our investment portfolio for which a lack of market liquidity impacted our determination of fair value.

Pension and Other Postretirement Benefits

The valuations of our pension and other postretirement benefit plan liabilities include assumptions regarding the mortality of the participants in the plans. In October 2014, the Society of Actuaries released revised mortality tables and a new mortality improvement scale that reflect longer life expectancies than under the previous tables and scale. Modifying the assumptions of the pension and other postretirement benefit plans to reflect updated mortality information will result in an increase in the Corporation's pension and other postretirement liabilities and related deferred income taxes with a corresponding reduction to other comprehensive income. We will consider the updated mortality information in the measurement of the Corporation's pension and other postretirement liabilities and financial position as of December 31, 2014.

Item 3 Quantitative and Qualitative Disclosures About Market Risk

For the Corporation's disclosures about market risk, see Item 7A in Part II of the Corporation's Annual Report on Form 10-K for the year ended December 31, 2013. There have been no material changes to the Corporation's disclosures about market risk in Item 7A of the Corporation's Annual Report on Form 10-K for the year ended December 31, 2013.

Item 4 Controls and Procedures

As of September 30, 2014, an evaluation of the effectiveness of the design and operation of the Corporation's disclosure controls and procedures (as such term is defined in Rule 13a-15(e) of the Securities Exchange Act of 1934) was performed under the supervision and with the participation of the Corporation's management, including Chubb's chief executive officer and chief financial officer. Based on that evaluation, the chief executive officer and chief financial officer concluded that the Corporation's disclosure controls and procedures were effective as of September 30, 2014.

During the quarter ended September 30, 2014, there were no changes in internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

PART II. OTHER INFORMATION

Item 1A Risk Factors

For a discussion of the Corporation's potential risks or uncertainties that could have a material effect on our business, results of operations, financial condition and/or liquidity or that could cause our operating results to vary significantly from fiscal period to fiscal period, see Item 1A in Part I of the Corporation's Annual Report on Form 10-K for the year ended December 31, 2013. Additional risks and uncertainties not currently known to us or that we currently deem to be immaterial also could have a material effect on our business, results of operations, financial condition and/or liquidity.

Item 2 Unregistered Sales of Equity Securities and Use of Proceeds

The following table summarizes Chubb's stock repurchased each month in the quarter ended September 30, 2014:

Period	Total Number of Shares Purchased	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs (a) (in millions)
July 1-31	2,036,661	\$ 91.45	2,036,661	\$ 637
August 1-31	1,760,431	88.55	1,760,431	481
September 1-30	898,977	91.56	898,977	399
Total	4,696,069	90.38	4,696,069	

- (a) On January 30, 2014, the Board of Directors authorized the repurchase of up to \$1.5 billion of Chubb's common stock. The January 30, 2014 authorization has no expiration date.
