Start-up of P-75 in Búzios field

pre-salt of Santos Basin

Rio de Janeiro, November 12, 2018 **Petróleo Brasileiro SA** Petrobras informs that yesterday it has started the production of oil and natural gas in the Búzios 2 area, in the pre-salt of Santos Basin, by means of platform P-75, second unit installed in the Búzios field.

The FPSO (floating production, storage, and offloading unit of oil and gas) is located approximately 210 km off the coast of the state of Rio de Janeiro, at a water depth of 2,000 meters.

With a daily capacity to process up to 150,000 barrels of oil and compress up to 6 million cubic meters of natural gas, P-75 will produce through ten producing wells, also using seven injection wells. Relief vessels will be used to offload the oil production, while gas will be drained by pre-salt pipeline routes.

FORWARD-LOOKING STATEMENTS

This release includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, that are subject to risks and uncertainties. The forward-looking statements, which address the Company's expected business and financial performance, among other matters, contain words such as believe, expect, estimate, anticipate, optimistic, intend, plan, aim, will, may, should, could, would, likely, and similar expressions cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date on which they are made. There is no assurance that the expected events, trends or results will actually occur. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information or future events or for any other reason.

The Company's actual results could differ materially from those expressed or forecast in any forward-looking statements as a result of a variety of assumptions and factors. These factors include, but are not limited to, the following: (i) failure to comply with laws or regulations, including fraudulent activity, corruption, and bribery; (ii) the outcome of ongoing corruption investigations and any new facts or information that may arise in

relation to the Lava Jato Operation ; (iii) the effectiveness of the Company's risk management policies and procedures, including operational risk; and (iv) litigation, such as class actions or proceedings brought by governmental and regulatory agencies. A description of other factors can be found in the Company's Annual Report on Form 20-F for the year ended December 31, 2017, and the Company's other filings with the U.S. Securities and Exchange Commission.

P-75 is the fourth platform to start production in 2018, after the FPSO Cidade Campos dos Goytacazes in the Tartaruga Verde field, the P-67 in the Lula field and the P-74 in the Búzios field. These platforms, together with P-67, which is already located in the Lula field, and P-76, which should go to the Búzios field in December, will conclude the six systems planned for this year in Brazil, contributing to the increase of Petrobras' production in the horizon of the 2018-2022 Business and Management Plan.

Búzios Field

Búzios, discovered in 2010, is the main field under the Transfer of Rights Agreement and began its production this year in April through platform P-74.

The Transfer of Rights regime gives Petrobras the exclusive right to explore and produce up to five billion barrels of oil equivalent in the Santos Basin.
