VERY POSITIVE NEW R&D RESULTS

IN PHASE III MAJOR COMPOUNDS

RIMONABANT in smoking cessation (STRATUS US study) and in obese, dyslipidemic patients (RIO-Lipids study). The Rimonabant phase III program is due to be completed at the end of 2004. If results from the phase III studies confirm the results that have just been announced, THIS COMPOUND ADDRESSING MAJOR HEALTH RISKS COULD BECOME A VERY LARGE BLOCKBUSTER.

DRONEDARONE in atrial fibrillation (EURIDIS and ADONIS studies)

AMBIEN® CR (Zolpidem MR) confirms its qualities in the induction, maintenance and duration of sleep (ZOLADULT study). The application for approval of Ambien® CR will be filed on schedule in the second quarter of 2004.

IN PHASE IIB

SAREDUTANT in depression. These favourable results should enable Saredutant to progress to phase III in 2004, making it the second of the Group's depression compounds to enter phase III after SR 58611.

SR 121463 (aquaretic) in the treatment of syndrome of inappropriate secretion of antidiuretic hormone (SIADH). The favourable phase IIB results should allow phase III trials to begin in this indication during 2004.

The development of TIRAPAZAMINE which is ongoing in head and neck cancer, has been terminated in lung cancer.
