Anglo Swiss Resources Inc. Sampling Confirms G9, G10 Garnets,
Kimberlite Indicator Mineral Trains
on the Fishing Lake Diamond Project, NWT

Anglo Swiss Resources Inc. (TSX-Venture-ASW, OTC BB ASWRF, Berlin - AMO) is pleased to report on the first of three diamond exploration properties recently acquired in the NWT, Canada.

The Company's Fishing Lake Project (Till Claims 1-7 Acquisition - New Release dated June 22, 2005) covers 16,631 acres and is centered approximately 100 kilometers north of Yellowknife, the NWT territorial capital. The Fishing Lake Project covers the probable source area for as yet unexplained kimberlite indicator mineral trains. Till samples collected during the 2004 season confirmed earlier sampling program results, and include G9 and G10 garnets.

Anglo Swiss is presently designing an exploration program to locate the source of the favourable kimberlite indicator mineral trains and is compiling information from previous exploration programs conducted by others on all three properties held by Anglo Swiss in Canada's Lac de Gras region, NWT. Results of the other two properties will be available soon.

Anglo Swiss Resources Inc. has an interest in over 108,487 acres of mineral claims in the Lac de Gras area, which hosts two producing diamonds mines and has extensive known diamondiferous kimberlites and kimberlite indicator minerals throughout the area. The company also controls 100 per cent of the 76,570-acre McAllister property (see news release Jan. 20, 2005), located in southeastern British Columbia, which has been identified as the host of a potential diamondiferous lamproite.

G. Macdonald, PGeo., a qualified person as defined by National Instrument 43-101, has approved the content of this news release.

On behalf of the Board of Directors of

Anglo Swiss Resources Inc.,

(s) *Len Danard*

President & CEO
